

#### MAAM-011290 Rev. V3

#### Features

- Gain: 20 dB
- Saturated Power: 20 dBm
- Output IP3: 32 dBm
- High Reverse Isolation: 47 dB
- 50 Ω Matched Input and Output
- +5 V Supply @ 107 mA
- Integrated Capacitors on RF Input and Output
- 3 mm 12-Lead AQFN Package
- RoHS\* Compliant

### Applications

- Microwave Radio
- VSAT
- Aerospace & Defense
- Test & Measurement

#### Description

The MAAM-011290 is a 5 - 20 GHz MMIC amplifier with 20 dB small signal gain,  $P_{SAT}$  of 20 dBm and high reverse isolation of 47 dB. The component requires only a single positive power supply.

#### **Ordering Information**

| Part Number        | Package        |
|--------------------|----------------|
| MAAM-011290-TR0500 | 500 piece reel |
| MAAM-011290-001SMB | Sample Board   |

#### **Functional Schematic**

## Pin Configuration<sup>1,2</sup>

| Pin #           | Function                 |
|-----------------|--------------------------|
| 1, 5, 6, 10, 12 | No Connection            |
| 2               | RF Input                 |
| 3, 7, 9         | Ground                   |
| 4               | Gate Voltage<br>Not Used |
| 8               | RF Output                |
| 11              | Drain Voltage            |

1. MACOM recommends connecting all no connection pins to ground.

2. The exposed pad centered on the package bottom must be connected to RF, DC and thermal ground.

\* Restrictions on Hazardous Substances, compliant to current RoHS EU directive.

MACOM Technology Solutions Inc. (MACOM) and its affiliates reserve the right to make changes to the product(s) or information contained herein without notice. Visit <u>www.macom.com</u> for additional data sheets and product information.

#### MAAM-011290 Rev. V3

#### Absolute Maximum Ratings<sup>3,4</sup>

| Parameter                           | Absolute Maximum |
|-------------------------------------|------------------|
| RF Power In                         | 10 dBm           |
| V <sub>DD</sub> Supply Voltage      | 6 V              |
| Supply Current                      | 150 mA           |
| Junction Temperature <sup>5,6</sup> | +150°C           |
| Operating Temperature               | -40C to +85°C    |
| Storage Temperature                 | -65°C to +165°C  |

3. Exceeding any one or combination of these limits may cause permanent damage to this device.

4. MACOM does not recommend sustained operation near these survivability limits.

5. Operating at nominal conditions with  $T_J \le +150^{\circ}C$  will ensure MTTF > 1 x 10<sup>6</sup> hours.

6. Junction Temperature (T<sub>J</sub>) = T<sub>C</sub> + Θjc \* (V \* I) Typical thermal resistance (Θjc) = 59°C/W.
a) For T<sub>C</sub> = +25°C, T<sub>J</sub> = 57°C @ 5 V, 107 mA
b) For T<sub>C</sub> = +85°C, T<sub>J</sub> = 120°C @ 5 V, 120 mA

## Maximum Operation Conditions

| Parameter                           | Maximum       |
|-------------------------------------|---------------|
| RF Power In                         | 5 dBm         |
| V <sub>DD</sub> Supply Voltage      | 4 - 5 V       |
| Supply Current                      | 120 mA        |
| Junction Temperature <sup>5,6</sup> | +150°C        |
| Operating Temperature               | -40C to +85°C |

### **Handling Procedures**

Please observe the following precautions to avoid damage:

#### **Static Sensitivity**

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these class 1B greater than 500 V HBM devices.

## **Application Schematic**

### **Operating Conditions**

Recommended biasing conditions are  $V_D = 5 V$  and  $V_G = 0 V$  open circuit.

Simply perform the following for bias:

1. Set V<sub>G</sub> = Open Circuit

DC blocking is not required on the RF input or RF output since blocking capacitors are provided internally. Use 0.01  $\mu$ F and 1  $\mu$ F bypass capacitors on the V<sub>D</sub> node and a 0.01  $\mu$ F capacitor on the V<sub>G</sub> node. Place the 0.01  $\mu$ F bypass capacitors as close as possible to the chip.
