ne<mark>x</mark>peria

Important notice

Dear Customer,

On 7 February 2017 the former NXP Standard Product business became a new company with the tradename **Nexperia**. Nexperia is an industry leading supplier of Discrete, Logic and PowerMOS semiconductors with its focus on the automotive, industrial, computing, consumer and wearable application markets

In data sheets and application notes which still contain NXP or Philips Semiconductors references, use the references to Nexperia, as shown below.

Instead of <u>http://www.nxp.com</u>, <u>http://www.philips.com/</u> or <u>http://www.semiconductors.philips.com/</u>, use <u>http://www.nexperia.com</u>

Instead of sales.addresses@www.nxp.com or sales.addresses@www.semiconductors.philips.com, use **salesaddresses@nexperia.com** (email)

Replace the copyright notice at the bottom of each page or elsewhere in the document, depending on the version, as shown below:

- © NXP N.V. (year). All rights reserved or © Koninklijke Philips Electronics N.V. (year). All rights reserved

Should be replaced with:

- © Nexperia B.V. (year). All rights reserved.

If you have any questions related to the data sheet, please contact our nearest sales office via e-mail or telephone (details via **salesaddresses@nexperia.com**). Thank you for your cooperation and understanding,

Kind regards,

Team Nexperia

INTEGRATED CIRCUITS

Product data Supersedes data of 2000 Aug 03 2002 Aug 02

74AVC16836A

FEATURES

- Wide supply voltage range of 1.2 V to 3.6 V
- Complies with JEDEC standard no. 8-1A/5/7.
- CMOS low power consumption
- Input/output tolerant up to 3.6 V
- DCO (Dynamic Controlled Output) circuit dynamically changes output impedance, resulting in noise reduction without speed degradation
- \bullet Low inductance multiple V_{CC} and GND pins for minimum noise and ground bounce
- Power off disables 74AVC16836A outputs, permitting Live Insertion
- Integrated input diodes to minimize input overshoot and undershoot
- Full PC133 solution provided when used with PCK2509S or PCK2510S and CBT16292

DESCRIPTION

The 74AVC16836A is a 20-bit universal bus driver. Data flow is controlled by output enable (OE), latch enable (LE) and clock inputs (CP).

This product is designed to have an extremely fast propagation delay and a minimum amount of power consumption.

To ensure the high-impedance state during power up or power down, OE should be tied to V_{CC} through a pullup resistor (Live Insertion).

A Dynamic Controlled Output (DCO) circuitry is implemented to support termination line drive during transient. See the graphs on page 8 for typical curves.

QUICK REFERENCE DATA

GND = 0 V; T_{amb} = 25 °C; t_r = $t_f \le$ 2.0 ns; C_L = 30 pF.

SYMBOL	PARAMETER	CONDITIO	NS	TYPICAL	UNIT	
t _{PHL} /t _{PLH}	Propagation delay An to Yn	$V_{CC} = 1.8 V$ $V_{CC} = 2.5 V$ $V_{CC} = 3.3 V$	2.4 1.7 1.5	ns		
t _{PHL} /t _{PLH}	Propagation delay LE to Yn; CP to Yn	V _{CC} = 1.8 V V _{CC} = 2.5 V V _{CC} = 3.3 V	2.7 2.1 1.7	ns		
Cl	Input capacitance					
6	Power dissipation capacitance per buffer $V_{I} = GND$ to V_{CC}^{1}		Outputs enabled	25	nE	
C _{PD} Power dissipation capacitance per buffer			Output disabled	6	pF	

NOTE:

1. C_{PD} is used to determine the dynamic power dissipation (P_D in μW):

 $P_{D} = C_{PD} \times V_{CC}^{2} \times f_{i} + \Sigma (C_{L} \times V_{CC}^{2} \times f_{o}) \text{ where: } f_{i} = \text{input frequency in MHz; } C_{L} = \text{output load capacitance in pF;}$ $f_{o} = \text{output frequency in MHz; } V_{CC} = \text{supply voltage in V; } \Sigma (C_{L} \times V_{CC}^{2} \times f_{o}) = \text{sum of outputs.}$

RECOMMENDED OPERATING CONDITIONS

SYMBOL	PARAMETER	CONDITIONS	MIN	MAX	UNIT	
			1.65	1.95		
	DC supply voltage (according to JEDEC Low Voltage Standards)		2.3	2.7	V	
V _{CC}			3.0	3.6		
	DC supply voltage (for low voltage applications)		1.2	3.6	V	
VI	DC Input voltage range		0	3.6	V	
N/	DC output voltage range; output 3-State		0	3.6	v	
Vo	DC output voltage range; output HIGH or LOW state		0	V _{CC}	v	
T _{amb}	Operating free-air temperature range		-40	+85	°C	
		V_{CC} = 1.65 to 2.3 V	0	30		
t _r , t _f	Input rise and fall times	V _{CC} = 2.3 to 3.0 V	0	20	ns/V	
		V _{CC} = 3.0 to 3.6 V	0	10		

ABSOLUTE MAXIMUM RATINGS

In accordance with the Absolute Maximum Rating System (IEC 134). Voltages are referenced to GND (ground = 0 V).

SYMBOL	PARAMETER	CONDITIONS	RATING	UNIT
V _{CC}	DC supply voltage		-0.5 to +4.6	V
I _{IK}	DC input diode current	V ₁ <0	-50	mA
VI	DC input voltage	For all inputs ¹	-0.5 to 4.6	V
I _{OK}	DC output diode current	$V_{O} > V_{CC} \text{ or } V_{O} < 0$	±50	mA
Vo	DC output voltage; output 3-State	Note 1	-0.5 to 4.6	V
Vo	DC output voltage; output HIGH or LOW state	Note 1	–0.5 to V _{CC} +0.5	V
Ι _Ο	DC output source or sink current	$V_{O} = 0$ to V_{CC}	±50	mA
I _{GND} , I _{CC}	DC V _{CC} or GND current		±100	mA
T _{stg}	Storage temperature range		-65 to +150	°C
P _{TOT}	Power dissipation per package –plastic thin-medium-shrink (TSSOP)	For temperature range: –40 to +125 °C above +55°C derate linearly with 8 mW/K	600	mW

NOTE:

1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

DC ELECTRICAL CHARACTERISTICS

Over recommended operating conditions. Voltage are referenced to GND (ground = 0 V).

TEST CIRCUIT

Waveform 7. Load circuitry for switching times

GRAPHS

Figure 1. Output voltage (V_{OL}) vs. output current (I_{OL})

Figure 2. Output voltage (V_{OH}) vs. output current (I_{OH})

A Dynamic Controlled Output (DCO) circuit is designed in. During the transition, it initially lowers the output impedance to effectively drive the load and, subsequently, raises the impedance to reduce noise. Figures 1 and 2 show V_{OL} vs. I_{OL} and V_{OH} vs. I_{OH} curves to illustrate the output impedance and drive capability of the circuit. At the beginning of the signal transition, the DCO circuit provides a maximum dynamic drive that is equivalent to a high drive standard output device.

Definitions

Short-form specification — The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.

Limiting values definition — Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 60134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

Application information - Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Disclaimers

Life support — These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes - Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
