# Surge Protection and Power Supply Units

## 2013 / 2014

## 1 PCB connection technology and electronics housing

- PCB terminal blocks and plug-in connectors
- Electronics housing

## 2 Connection technology for field devices

- Plug-in connectors
- Cables and connectors

## 3 Modular terminal blocks

- Modular terminal blocks

## 4 Sensor/actuator cabling and industrial plug-in connectors

- Sensor/actuator cabling
- Cables and connectors
- Plug-in connectors

## 5 Marking systems, tools, and mounting material

- Marking and labeling
- Tools
- Installation and mounting material

## 6 Surge protection and power supply units

## 7 Interface technology and switching devices

- Electronic switching devices and motor control
- Measurement and control technology • Monitoring
- Relay modules • System cabling for controllers

## 8 Control technology, I/O systems and automation infrastructure

- Ethernet networks • Functional safety • HMIs and industrial PCs • I/O systems
- Industrial lighting and signaling • Industrial communication technology
- Fieldbus components and systems • Wireless data communication
- Process infrastructure • Software • Controllers

# LM-S lightning monitoring system

Lightning strikes are a particular hazard for exposed structures such as offshore wind parks, radio masts, leisure facilities or high buildings.

The LM-S lightning current measuring system can detect, evaluate, and remotely monitor lightning strikes in realtime. This means that information about the actual load on the system from lightning strikes is available at all times. The findings obtained regarding the load on a system enable optimized maintenance planning.

## Lightning monitoring system

# **Lightning current measuring system**

## **Lightning current measuring system introduction**

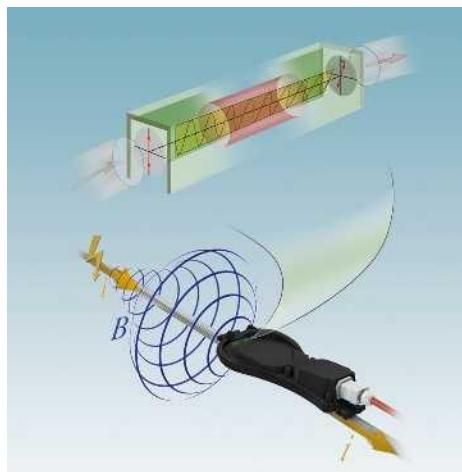

Lightning strikes cause devastating damage to buildings and systems. It is practically impossible for employees to continuously monitor exposed or large-scale systems, which means that damage is detected too late.

### **Detecting lightning with the lightning monitoring system**

The LM-S lightning monitoring system supports continuous monitoring. Lightning events are detected, evaluated, and remotely monitored via network access. This means that information about the actual load on the system from lightning strikes is available at all times. The findings obtained regarding the load on a system enable optimized maintenance planning.

The LM-S lightning current measuring system consists of the following components:

- Sensor
- Connecting cable
- O/E module
- Evaluation unit

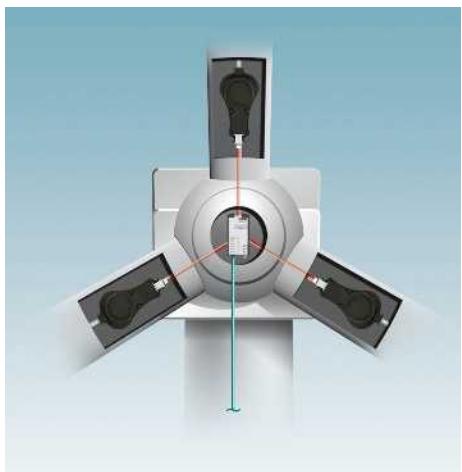

### Faraday effect as a reliable measuring method

The internal measuring principle of the LM-S is based on the Faraday effect. Polarized light in a specific medium is rotated through a magnetic field over a defined length and measured.

The higher the amperage ( $i$ ) generated by a lightning strike the greater the magnetic flux density ( $B$ ) and, therefore, the rotation of the polarized light.

The lightning monitoring system detects this change in the light signal and uses this as the basis for the corresponding measured value results.

### Detection and evaluation

The sensors are mounted on the lightning arrester cables. They record the magnetic field that occurs around the conductor due to the lightning surge current. The measured result is transmitted via fiber optics to the O/E module of the evaluation unit, where the optical signal is converted into an electrical signal. Based on the values obtained, the evaluation unit determines the lightning characteristics with their typical parameters, including, for example, the maximum lightning current strength, lightning current rate of rise, charge, and energy. These results can be forwarded to an available management system via the Ethernet interface.

### Remote monitoring in realtime

The evaluation unit can be easily integrated into standard network systems via the RJ45 Ethernet interface. An internal web server is used as the basis for accessing recorded data and configuring the system. The web interface is opened via the Internet browser of a PC connected to the system using IP addressing.

# Lightning current measuring system

## LM-S

### Sensor

- Optical lightning sensor for measuring current strength of lightning surge currents
- Subsequent mounting is possible
- Rugged design
- Resistant to vibrations, temperature, and humidity
- Good UV resistance
- Good oil resistance

Sensor

Technical data			
Detectable values	250 kA		
Maximum current strength			
FO interface	SCRJ socket with push/pull connector, IP67		
Connection method			
General data			
Ambient temperature (operation)	-30 °C ... 60 °C		
Ambient temperature (storage/transport)	-40 °C ... 85 °C		
Degree of protection	IP67

Description	Type	Order No.	Pcs./Pkt.
Sensor	LM-S-LS-H	2800616	1

### Connecting cable

- HCS cable for connecting LM-S sensors to the O/E module
- Robust cable for use in harsh environments
- Good UV resistance
- Good oil resistance

#### Notes:

The specified plug configuration (see ordering example) must be used in order to use the connecting cable in the LM-S lightning monitoring system. Recommended length: 10 to 200 m

Connecting cable for LM-S

### Ordering example for LM-S connecting cable with variable cable length:

Assembled connecting cable for the LM-S lightning monitoring system, with a metal push/pull plug-in connector, a B-FOC plug, and a cable length of 10 m.

Order No.	Length [m] Max. 200 m
1408480 / FOC-HCS-BFOC/1018B/PPCME	10.0
Increments: 10.0 m ... 200 m = 1.0 m	

Technical data

## Evaluation unit

- Complete module including O/E module for connecting up to three LM-S sensors
- Evaluation and storage of amperage, current increase rate, charge, and specific energy
- Realtime analysis and exact time allocation
- Status and diagnostic indicators
- Communication via Ethernet
- Operation and configuration via web interface
- Mounting on a DIN rail

**Evaluation unit with O/E module**

# Surge protection and interference filters

## Damage caused by surge voltages

The number of electrical devices damaged or destroyed by surge voltages is increasing year on year. This can prove expensive in terms of repairs and downtimes. In an industrial environment, the hazards are not only restricted to systems and devices. Building technology applications and even residential buildings may be affected.

## Interference voltages

Switching operations triggered mechanically or electronically generate pulse-like and high-frequency interference voltages. These voltages spread in an unimpeded manner across the cable network. All the devices within this cable network are affected. Data errors, uncontrolled functions, and system crashes can result, with electronic and data processing devices at particular risk.

## Selection guide and applications

### General information on the application drawings below

- The example illustrations are intended to help you select the right surge protection. They make no claim to be complete with regard to the prescribed safety measures.
- The illustrated connection diagrams do not replace standard-compliant planning of a protection concept by an electrical or lightning protection specialist.
- The fixed electrical installation may only be accessed by trained specialist personnel.
- In order to ensure the correct and appropriate use of products, the relevant installation notes must be observed prior to installation or startup.
- All information/notes can be downloaded under the relevant product documentation at [www.phoenixcontact.net/products](http://www.phoenixcontact.net/products).

Distinguishing features of the protective devices for the power supply					
	Type 1	Type 1+2	Type 1/2	Type 2	Type 3
<b>Lightning protection zone transition</b>	0-1	0-2	0-1/1-2	1-2	2-3
<b>Without detailed calculation of the lightning surge current at the installation location can be used at Lightning Protection Level</b>	I - IV	I - IV	III - IV		
<b>Type 1 and type 2 combined in a single device</b> Can be used universally		<input checked="" type="checkbox"/>

## Surge protection and interference filters

### Surge protection for the power supply unit

#### The complete system

The protective devices in the "compact" range offer a consistent installation concept. Uniform and high-capacity modules are available for virtually all power supply systems. Be it lightning arrester, surge arrester or a combination of the two, the design will persuade you with its consistent and universal application.

#### Worldwide use

The voltage fluctuations in power supplies vary from country to country. The surge protection also has to deal with these short-term (temporary) voltage fluctuations. Due to the high rated voltage of 350 V AC, the arresters in the "compact" range have no limitations and can be used in systems up to 240/415 V.

#### FLASHTRAB compact PLUS

High-performance type 1 lightning arresters with low protection level based on spark gap technology for power supply systems up to 240/415 V.

#### FLASHTRAB compact

Combined lighting and surge arrester for power supply systems up to 240/415 V.

#### VALVETRAB compact

Space-saving surge arrester for all common power supply systems up to 240/415 V.

#### Combined solutions

The VALVETRAB compact type 2 surge arresters, which are available as Combi-RCD surge protection with residual current device and Combi-MCB surge protection with coordinated backup fuse, are equipped with further functions.

#### Device protection in multiple versions

Type 3 device protection is designed to provide protection for highly sensitive devices. Depending on installation location, the following protective devices are available, for example:

- For DIN rail mounting – PLUGTRAB PT
- For cable ducts – BLOCKTRAB
- Socket attachment plugs – MAINTRAB

## Plug-in to perfection

Universal plug-in capability ensures a high degree of comfort, e.g., for insulation measurements in the system. Instead of tampering with the installation, just pull out the plug.

The symmetrical plug design facilitates plugging in both directions within the base element. These protective devices can be installed in any control cabinet environment thanks to this flexible installation direction.

## Innovative technology

The high breaking capacity of the innovative spark gaps also enables their use in low-voltage high-current installations with short-circuit currents of up to 50 kA. The encapsulated lightning arresters are also able to limit line follow currents so that even small backup fuses are not affected.

## Status at a glance

The mechanical status indicator provides information locally at a glance.

## Remote signaling

A common floating remote indication contact enables remote signaling without taking up extra space.

## Different designs

Arresters in different designs are available for the various areas of application.

# Surge protection and interference filters

## Surge protection for the power supply unit

### Type 1 lightning arresters FLASHTRAB compact PLUS

- Seamless pluggability (even for N/PE spark gap)
- Thermal disconnect device for each individual connector
- Optical, mechanical status indication for the individual arresters
- With floating remote indication contact
- Connectors can be checked with CHECKMASTER
- High continuous voltage of 350 V AC for 230/400 V AC networks with high voltage fluctuations

## Surge protection for the power supply unit

### Type 1 lightning arresters FLASHTRAB compact PLUS

- Seamless pluggability (even for N/PE spark gap)
- Thermal disconnect device for each individual connector
- Optical, mechanical status indication for the individual arresters
- With floating remote indication contact
- Connectors can be checked with CHECKMASTER
- High continuous voltage of 350 V AC for 230/400 V AC networks with high voltage fluctuations

#### Notes:

## Surge protection for the power supply unit

### Type 1 lightning arresters POWERTRAB

#### Notes:

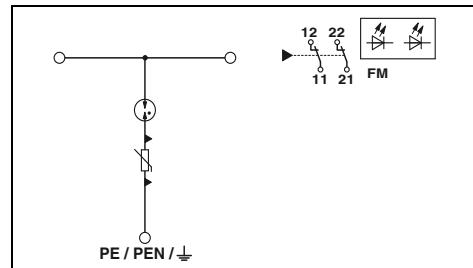

For certifications, see page 154

- Type 1 arrester based on a varistor
- Meets Lightning Protection Level I
- Universal solution for various network types:
  - 500 ... 690 V AC IT systems
  - 554/960 V AC TN-C systems
  - 400/690 V AC TN-C systems
- Multi-stage status monitoring via remote indication contact
- Local optical status indication
- Encapsulated, non-extinguishing
- Free of leakage current/no line follow current
- Very high TOV resistance
- Meets installation requirements according to CLC/TS 50539-22
- Use in harsh industrial environments

Single-channel

Total width 56 mm

Technical data

#### Electrical data

IEC category	I, II / T1, T2
Nominal voltage $U_N$	690 V AC
Maximum continuous operating voltage $U_C$	800 V AC
TOV behavior at $U_T$	1500 V AC (5 sec.)
Nominal load current $I_L$	150 A (Serial through wiring with 50 mm <sup>2</sup> )
Nominal discharge surge current $I_h$ (8/20) $\mu$ s	35 kA
Max. discharge surge current $I_{max}$ (8/20) $\mu$ s	100 kA
Lightning test current $I_{imp}$ (10/350) $\mu$ s	
Peak value $I_{imp}$	35 kA

Protection level  $U_P$

Max. required backup fuse with branch wiring

Max. required backup fuse with V-type through wiring

Short-circuit resistance  $I_p$  with max. backup fuse (effective)

$I_p$	35 kA
$U_P$	$\leq 4.5 \text{ kV}$
Max. required backup fuse with branch wiring	400 A (gG; 2 x 50 mm <sup>2</sup> )
Max. required backup fuse with V-type through wiring	800 A (aR)
Short-circuit resistance $I_p$ with max. backup fuse (effective)	150 A (gG; $\geq 35 \text{ mm}^2$ )

#### General data

# Surge protection and interference filters

## Surge protection for the power supply unit

### Type 1+2 lightning/surge arrester combination

#### FLASHTRAB compact

- Seamless pluggability (even for N/PE spark gap)
- Thermal disconnect device for each individual connector
- Optical, mechanical status indication for the individual arresters
- With floating remote indication contact
- Connectors can be checked with CHECKMASTER
- High continuous voltage of 350 V AC for 230/400 V AC networks with high voltage fluctuations

5-conductor system; L1, L2, L3, N, PE

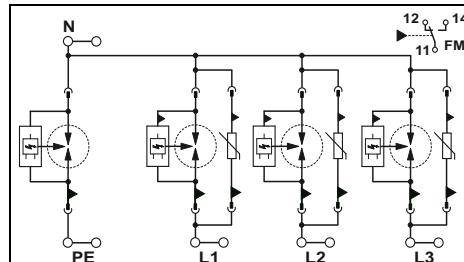

4-conductor system; L1, L2, L3, PEN

#### Notes:

For certifications, see page 154

Total width 142.8 mm

#### Technical data

I + II / T1 + T2

240 V AC (230/400 V AC ... 240/415 V AC)

L-N / N-PE / L-PEN 350 V AC / 350 V AC / -

Lightning test curr.  $I_{imp}$  (10/350)  $\mu$ s

Peak value 100 kA

Charge 50 As

Specific energy 2.50 MJ/ $\Omega$

Nominal discharge surge current  $I_n$  (8/20)  $\mu$ s

L-N / N-PE / L-PEN 25 kA / 100 kA / -

Follow current quenching capacity  $I_{qi}$

L-N / N-PE / L-PEN 25 kA (264 V AC) / 100 A / -

Protection level  $U_p$

L-N / N-PE / L-PEN  $\leq 1.5$  kV /  $\leq 1.5$  kV / -

Response time  $t_A$

L-N / N-PE / L-PEN  $\leq 25$  ns /  $\leq 100$  ns / -

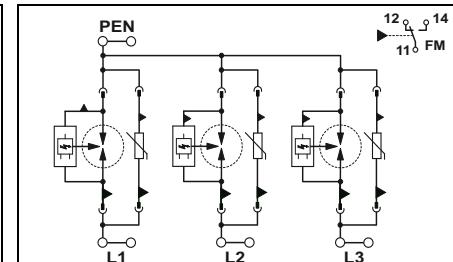

Backup fuse max. in acc. with IEC

315 A (gL/gG)

Immunity to short-circuiting (with max. backup fuse)  $I_p$

25 kA

Total width 106.9 mm

# Surge protection and interference filters

## Surge protection for the power supply unit

### Type 2 surge arresters

#### VALVETRAB MS

#### 30/40 kA performance class

- Multi-channel type 2 arrester
- Type 2 seamless plug-in surge arrester
- Disconnect device on each individual connector
- Optical, mechanical status indication for the individual arresters
- With or without floating remote indication contact
- Mechanical keying of all slots

**Notes:**

For certifications, see page 154

## Surge protection for the power supply unit

### Type 2 surge arresters VALVETRAB MS

#### Notes:

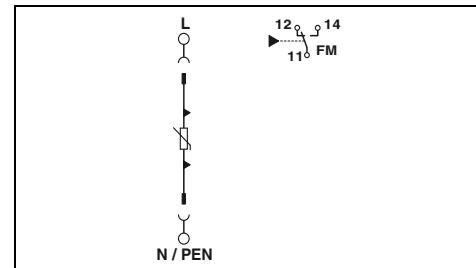

For certifications, see page 154

- Single-channel, DIN-rail mountable protective devices
- Comprising base element and connector
- Base element with/without floating remote indication contact
- Disconnect device on each individual connector
- Optical, mechanical status indication for the individual arresters
- Mechanical keying of all slots

2-conductor system; L, N/PEN

Total width 17.7 mm

# Surge protection and interference filters

## Surge protection for the power supply unit

### Surge protection for special applications

- Universal pluggability
- Also suitable for industry solutions, e.g., in the rail and telecommunications sectors
- Thermal disconnect device for each individual connector
- Optical, mechanical status indication for the individual arresters
- With or without floating remote indication contact
- Mechanical keying of all slots
- Connectors can be checked with CHECKMASTER

For nominal voltages up to 48 V DC

# Surge protection and interference filters

## Surge protection for the power supply unit

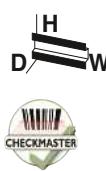

### Type 2 surge arresters with RCD

#### Combi-RCD

- For 5-conductor systems; L1, L2, L3, N, PE
- Combination of type 2 surge arrester and RCD residual current circuit breaker
- Personal protection and device protection in a single device
- Type 2 seamless plug-in surge arrester
- Disconnect device on each individual connector
- Optical, mechanical status indication for all protective connectors
- Residual current circuit breaker is not triggered by magnetic influences caused by discharge currents in the type 2 arrester
- Connectors can be checked with CHECKMASTER

#### Notes:

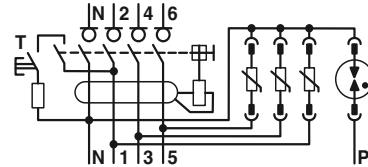

For certifications, see page 154

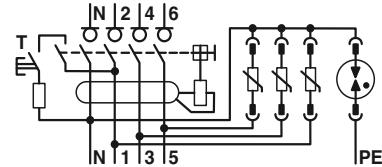

**With selective RCD residual current circuit breaker, 300 mA**

# Surge protection and interference filters

## Surge protection for the power supply unit

### Type 3 device protection **BLOCKTRAB and PRINTRAB**

**BT-1S-230AC/...** is device protection in deep installation boxes (in acc. with DIN 49073), cable ducts, underfloor systems, and termination devices.

- With double spring-cage terminal blocks for tool-free conductor connection
- Side latches for easy fixing
- Optical/acoustic signaling of disconnection

For universal mounting, optical signaling

**BT-SKT 230/A** is device protection for UP sockets.

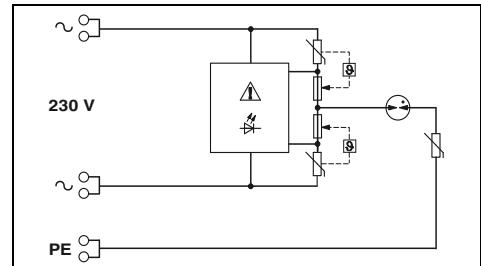

- Independent of the switch range and pin arrangement
- Is mounted on the socket insert
- For installation boxes as per DIN 49073
- Bridges provided for multiple combination
- Subsequent on-site installation possible
- Thermally monitored protective circuit
- Acoustic signaling of disconnection
- Signal deactivation by pulling the link under the socket cover

**MAINS-PRINTRAB** is device protection for installation in cable ducts and installation boxes.

- Two-piece design, consisting of **PRT-S-.../FM** protective connector and **PRT-CD-AD1** flush-type base
- Optical and optical/audible signaling of disconnection
- With floating remote indication contact
- Installation in range of switches with the appropriate central plate possible
- Tool-free connector replacement

Notes:
For certifications, see page 154

Total width 22.5 mm

# Surge protection and interference filters

## Surge protection for the power supply unit

### Type 3 device protection MAINTRAB

- Attachment plug
- For individual termination devices
- With increased touch-proof protection
- Optical signaling of the surge voltage function via LED

Note: More information on other versions of MNT attachment plugs with combined protection for the power supply unit and the interfaces of data/information technology can be found starting on page 126.

Attachment plug

Attachment plug for Powerline transmission

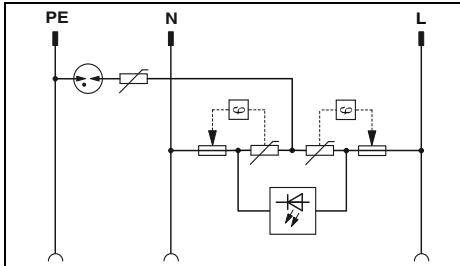

### MNT-POWERLINE

- For Powerline transmission systems
- With adapted protective circuit
- Optimized attenuation behavior
- Optical signaling of the surge voltage function via LED

**TRABTECH wiring bridges**

- For combinations of lightning and surge arresters
- In combination with other devices in the installation distributor, such as residual current circuit breakers and miniature circuit breakers
- Practical wiring of all common applications
- Single, three or four-phase versions with various numbers of positions
- The rated cross section of the MPB bridge metals is 16 mm<sup>2</sup> per phase
- End covers are used to terminate and insulate individually cut bridges

**TRABTECH housing**

- For separate installation of surge protective devices
- Use in harsh environmental conditions at the installation location
- Installation outdoors or indoors possible
- Aluminum housing equipped with two cable glands
- Supplied as standard: an NS 35/7.5 DIN rail
- The DIN rail requires five part width sections of 17.5 mm each

IP65 protection class

## Renewable energy sources

### Lightning and surge arresters for PV systems

- Type 1 and type 2 consistent plug-in arresters
- Reliable contact, thanks to integrated rotating latch
- Optical, mechanical status indication for the individual arresters
- With or without floating remote indication contact
- Mechanical keying of all slots

**Notes:**

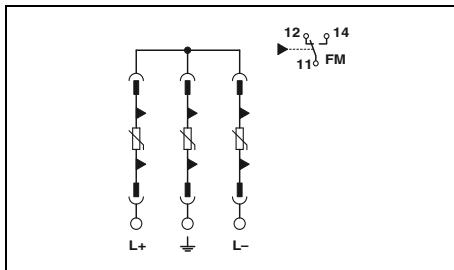

For certifications, see page 154

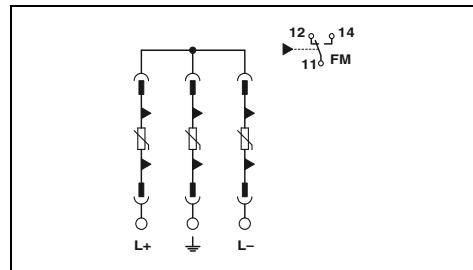

Type 1/2 arrester for insulated and single-sided grounded PV applications

Type 2 arrester for insulated and single-sided grounded PV applications

## Set solution for building installation

- Surge protection set for powerful basic protection
- Coordinated protective devices
- VAL-MS-T1/T2 lightning arrester for installation in the distribution
- Three device protection adapters (type 3) for protecting the power supply
- Two of these are equipped with additional signal line protection (TV/SAT or TAE)
- Cables and adapters are supplied as standard

Set solution with surge protection for TAE and TV-SAT

# Surge protection and interference filters

## Surge protection for measurement and control technology

### Intelligent and systematic surge protection – PLUGTRAB PT-IQ

The PLUGTRAB PT-IQ product range is the first to offer predictive function monitoring for surge protective devices in the context of measurement and control technology. Boasting a whole range of additional features, the new surge protection system is a real highlight from Phoenix Contact.

### Always know what is happening – predictive monitoring

The individual components of the protective devices are permanently monitored. When the performance limit has been reached as a result of frequent surge voltages, this is indicated by the yellow status symbol. The arrester continues to function and your system is still protected. However, replacement of the protective plug is recommended. This ensures you are informed even earlier and can replace your surge protection before the protective plug is overloaded (red signal). Furthermore, if you use the remote signaling option, you can check how well your system is being protected from anywhere and at any time.

### Permanent and error-free installation

The PLUGTRAB PT-IQ minimizes the amount of wiring required. This is made possible by the DIN rail connector (TBUS), which is easily clipped onto the DIN rail. A controller handles the distribution of the power supply and implements remote signaling of all connected surge protective devices via the TBUS. All you have to do then is install the surge protective devices on the TBUS – and you're done! The plug and base element are coded to avoid installation errors during replacement.

### Limitless extension

The controller monitors all arresters which are connected to the controller via the TBUS. You can bridge the TBUS across DIN rails to monitor even more protective devices. After 28 protective devices, an additional controller must be installed to supply voltage. Remote signaling can be performed from any controller in the system.

### Other surge protective devices

PLUGTRAB PT are plug-in arresters without remote signaling, also with switching variants for intrinsically safe signal circuits.

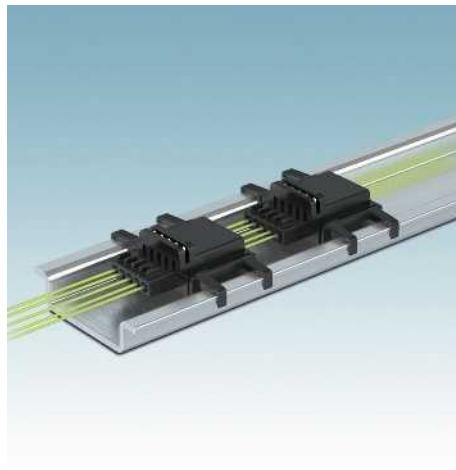

The multi-stage modular terminal blocks in the TERMITRAB or LINETRAB product ranges have a design width of just 6.2 mm yet are able to offer protection for up to four signal wires.

As they are installed directly on measuring sensors, the SURGETRAB screw connection modules are able to provide reliable protection against transients even in EX-i and Ex-d applications.

The products in the COMTRAB modular range have been designed specifically for use in marshalling distributors.

**Group message**

Green: protective device OK  
 Yellow: performance limit reached, replacement recommended  
 Red: protective device overloaded, replace

**Multi-level remote signaling**

Connect the remote signaling to the controller that acts as a supply and remote module (one-off connection operation). The status is output according to the priority as red, yellow or green. This ensures you always know what is happening and can always keep an eye on your system's protection.

**TBUS DIN rail connector**

The DIN rail connector (TBUS) supplies voltage to the protection modules and forwards the status of each individual arrester to the controller. You benefit from the reduced wiring costs and can implement surge protection quickly without errors.

**Narrow arresters**

The narrow TERMITRAB modular terminal blocks have a design width of just 6.2 mm. Some offer multi-stage protective circuits for Ex and non-Ex applications.

**Special systems**

Implement protection in the field directly at the measuring sensor with SURGETRAB screw connection modules.

**Versions for terminal strips**

COMTRAB modular type protective devices are used for highly compressed cable networks like those found in marshalling distributors, for example.

# Surge protection and interference filters

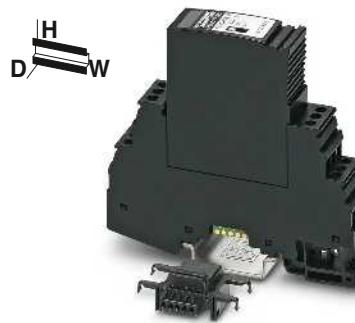

## Surge protection for measurement and control technology

### PLUGTRAB PT-IQ with screw connection

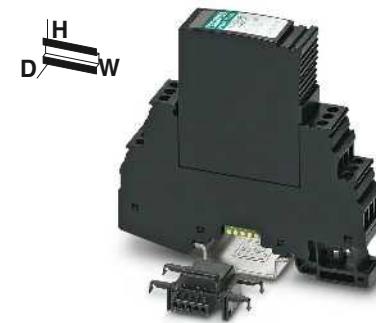

- Surge protection system
- Multi-level state monitoring
- Collective message about supply and remote module
- Multi-level, floating remote signaling
- System supplied via DIN rail bus
- Up to 28 protection modules per supply module
- Maximum ease of maintenance thanks to the two-piece design
- Plugs are coded
- Impedance-neutral disconnection of plug for maintenance purposes
- Base element remains an integral part of the installation
- Base element with screw connection technology

# Surge protection and interference filters

## Surge protection for measurement and control technology

### PLUGTRAB PT-IQ with push-in connection technology

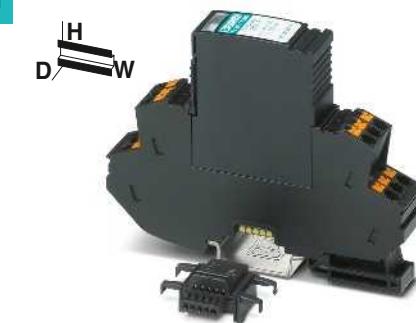

- Surge protection system
- Multi-level state monitoring
- Collective message about supply and remote module
- Multi-level, floating remote signaling
- System supplied via DIN rail bus
- Up to 28 protection modules per supply module
- Maximum ease of maintenance thanks to the two-piece design
- Plugs are coded
- Impedance-neutral disconnection of plug for maintenance purposes
- Base element remains an integral part of the installation
- Base element in push-in connection technology

#### Notes:

For certifications, see page 154

# Surge protection and interference filters

## Surge protection for measurement and control technology

### PLUGTRAB PT-IQ with screw connection

- Surge protection system
- Multi-level state monitoring
- Collective message about supply and remote module
- Multi-level, floating remote signaling
- System supplied via DIN rail bus
- Up to 28 protection modules per supply module
- Maximum ease of maintenance thanks to the two-piece design
- Plugs are coded
- Impedance-neutral disconnection of plug for maintenance purposes
- Base element remains an integral part of the installation
- Base element with screw connection technology

# Surge protection and interference filters

## Surge protection for measurement and control technology

### MCR-PLUGTRAB PT

<b>Notes:</b>
For certifications, see page 154

- Seamless plug-in signal circuit protection
- Maximum ease of maintenance thanks to the two-piece design
- Base element remains an integral part of the installation
- Impedance-neutral disconnection of connector for test and maintenance purposes
- Connectors can be checked with CHECKMASTER

2 double wires (loops), floating

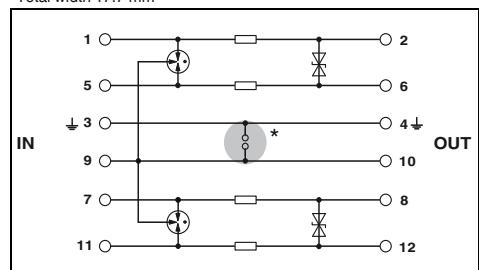

#### PT 2x2...

- Protection for two separate floating signal circuits
- Installed in conjunction with the PT 2x2...-BE base element

#### PT 4x1...

- Protection for four wires with common reference potential
- Installed in conjunction with the PT 4x1...-BE base element

Total width 17.7 mm

#### \* Note:

Various grounding options for the base elements:

**PT .x.-BE** connections 9/10 (GND) directly connected to the mounting foot.

**PT .x.+F-BE** connection 9/10 (GND) connected to the mounting foot via a gas-filled surge arrester.

- Seamless plug-in signal circuit protection
- Maximum ease of maintenance thanks to the two-piece design
- Base element remains an integral part of the installation
- Impedance-neutral disconnection of connector for test and maintenance purposes
- Connectors can be checked with CHECKMASTER

**\* Note:**

Various grounding options for the base elements:

**PT .x.-BE** connections 9/10 (GND) directly connected to the mounting foot.

**PT .x.+F-BE** connection 9/10 (GND) connected to the mounting foot via a gas-filled surge arrester.

**Notes:**

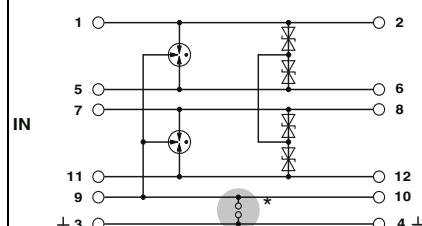

For certifications, see page 154

# Surge protection and interference filters

## Surge protection for measurement and control technology

### MCR-PLUGTRAB PT

- Protection for fieldbus systems, PROFIBUS, and signal circuits with 3 to 5-wire technology
- Cable shield connection using SSA... shield fast connection
- Grounding plug (PT MCR-EST) to short circuit and ground the potentials in PLUGTRAB-PT base elements
- Seamless plug-in signal circuit protection
- Maximum ease of maintenance thanks to the two-piece design
- Base element remains an integral part of the installation
- Impedance-neutral disconnection of connector for test and maintenance purposes
- Connectors can be checked with CHECKMASTER

**\* Note:**

Various grounding options for the base elements:

**PT .x.-BE** connections 9/10 (GND) directly connected to the mounting foot.

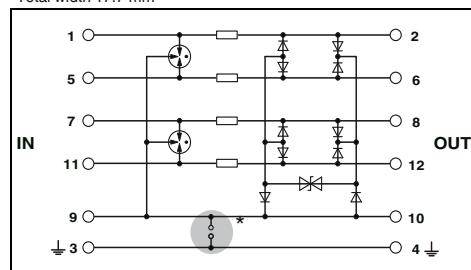

**PT .x.+F-BE** connection 9/10 (GND) connected to the mounting foot via a gas-filled surge arrester.

# Surge protection and interference filters

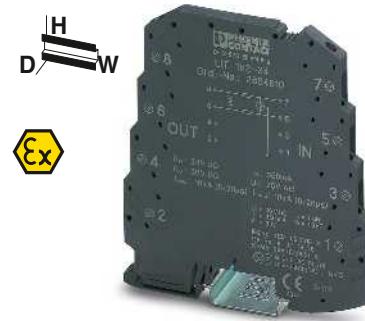

## Surge protection for measurement and control technology

### LINETRAB LIT

- Protection of up to four signal wires with a design width of 6.2 mm
- Can be used in binary, analog, and intrinsically safe circuits

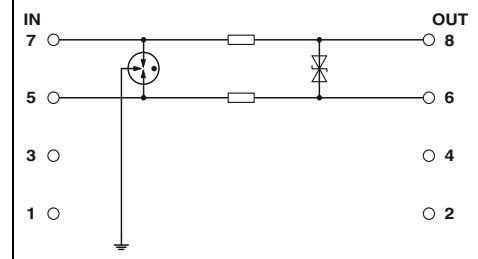

The latest information on approvals and use in intrinsically safe circuits can be found at [www.phoenixcontact.net/products](http://www.phoenixcontact.net/products).

Notes:
For certifications, see page 154
For additional safety data, visit <a href="http://www.phoenixcontact.com">www.phoenixcontact.com</a>

# Surge protection and interference filters

## Surge protection for measurement and control technology

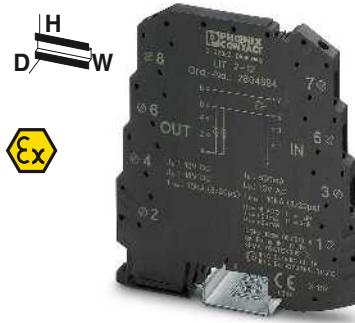

### LINETRAB LIT

- Protection for up to four signal wires
- Cross-arrester bridging of the reference potential with ME 6,2 TBUS
- Protection of up to four signal wires with a design width of 6.2 mm
- Complete normal mode voltage protection between all wires

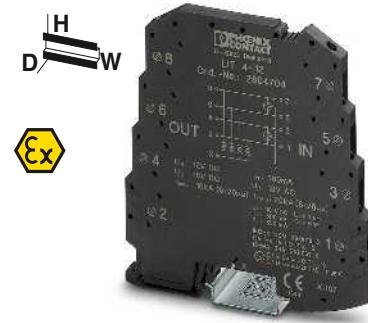

**Notes:**

For certifications, see page 154

#### Configuration aid for LINETRAB - MINI Analog

Since LINETRAB and MINI Analog housing is the same shape, the advantages of system cabling can be utilized. You can create a perfectly coordinated, protected signal string from the sensor through to the controller.

The table below lists possible combinations with the system adapter (8 modules each). The complete configuration aid is available in the Download Center under LINETRAB. More detailed information about MINI Analog can be found in the catalog 7.

TRABTECH - LINETRAB		INTERFACE - MINI Analog

# Surge protection and interference filters

## Surge protection for measurement and control technology

### Modular terminal blocks with multiple stage surge protection TERMITRAB

- Multi-stage modular terminal blocks with screw connection method
- Versions with and without disconnect knife
- Disconnection of signal circuits by disconnect knife

#### TT-2-PE-...

- Protection of a floating double wire
- E.g., 0 - 20 mA or 0 - 10 V signals

#### TT-2-PE/S1...

- Protection of a floating double wire in which the introduction of additional resistors for decoupling the protection stages leads to problems
- E.g., for two-wire temperature measurement, PT 100

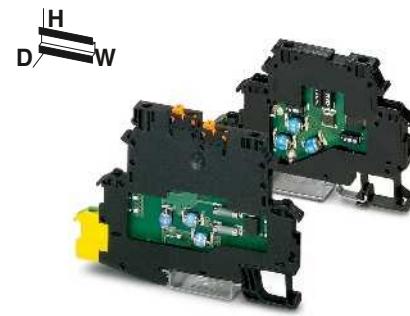

#### TT-2/2...

- Protection of two signal wires with common reference potential
- E.g., binary signals of position encoders

#### TT-EX(I)-...

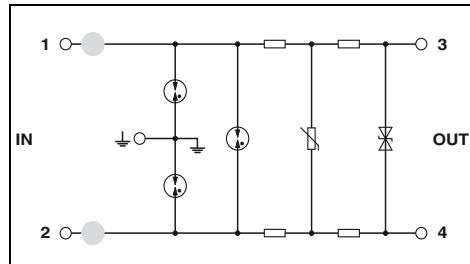

- Protection of a floating double wire in intrinsically safe circuits
- Use in Ex protection zones 1 and 2
- Wires can be led through to Ex protection zone 0
- To terminate a row of TERMITRAB TT... devices, covers are available in the corresponding colors
- Other voltage levels available on request

**Notes:**  
For certifications, see page 154

# Surge protection and interference filters

## Surge protection for measurement and control technology

### TERMITRAB modular terminal block with single-level surge protection

#### Notes:

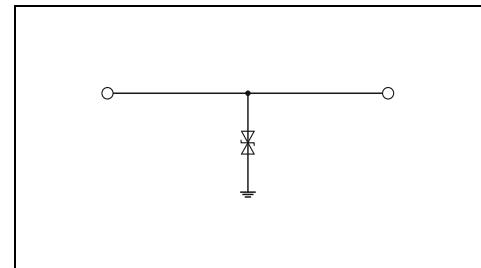

For certifications, see page 154

- Modular terminal blocks with screw connection method
- Can be used as fine protection/medium protection in the signal circuits of electronic controllers

**With suppressor diode, direction of action:  
core-ground**

Total width 6.2 mm

#### Technical data

Electrical data	... 12DC	... 24DC	... 48DC
IEC category / EN type	C1 / C3	C3	C3
Maximum continuous operating voltage $U_c$	DC/AC	13 V DC / 9 V AC	28 V DC / 20 V AC
Nominal current $I_N$		32 A (50°C)	32 A (50°C)
Nominal discharge surge current $I_n$ (8/20) $\mu$ s	Core-Core / Core-Ground	- / 346 A	- / 169 A
Total surge current (8/20) $\mu$ s		346 A	169 A
Output voltage limitation at 1 kV/ $\mu$ s	Core-Core / Core-Ground	- / ≤ 19 V	- / ≤ 40 V
			- / ≤ 80 V

# Surge protection and interference filters

## Surge protection for measurement and control technology

### Surge protection direct at the sensor head

#### SURGETRAB

- Arresters in hexagonal tube with various outer threads
- **S-PT-1x2...** and **S-PT-EX(I)...** installation in signal path feed-through
- **S-PT-EX, S-PT-2xEX...**, and **S-PT-4-EX** installation in a separate cable gland parallel to the signal cables
- S-PT-EX... devices are approved for Ex-i and Ex-d measuring probes

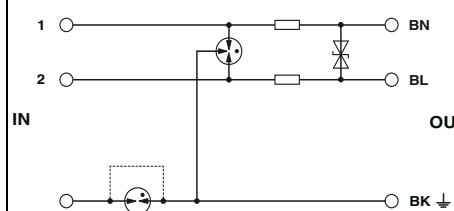

Double wire (loop), floating

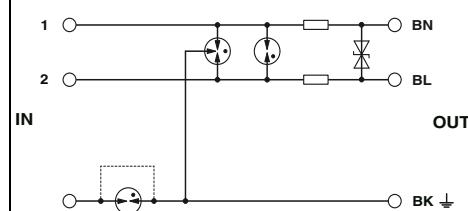

Double wire (loop), intrinsically safe

Notes:
For certifications, see page 154

# Surge protection and interference filters

## Surge protection for measurement and control technology

### COMTRAB modular

- Modular compact protection for high-density networks
- Space-saving LSA-PLUS connection technology
- Surge protection connectors for 1 - 10 double wires or 2 - 20 individual wires
- Typical installation locations include marshalling distributors
- Can be used in LSA-PLUS disconnect and control strips or CT-TERMIBLOCK
- The CTM 10-MAG surge protection card cage can be mounted with any of the different protective connectors

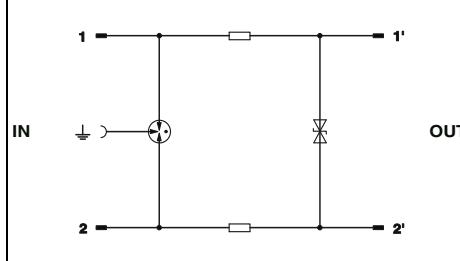

Double wire (loop), floating

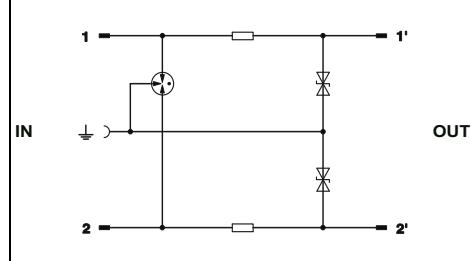

2-wire, with common reference potential

# Surge protection and interference filters

## Surge protection for measurement and control technology

### COMTRAB modular

#### CTM ISDN

- Tailored to the ISDN bus with basic and primary multiplex connections
- Two protective connectors are required to protect the ISDN bus

#### CTM EST

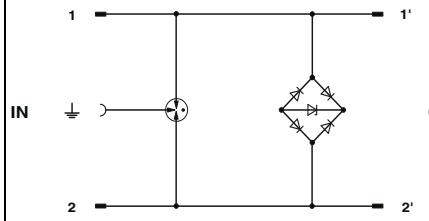

- Grounding plug to short circuit and ground the wires

**Double wire (loop), ISDN S<sub>0</sub>**  
**(2 connectors are required for one bus)**

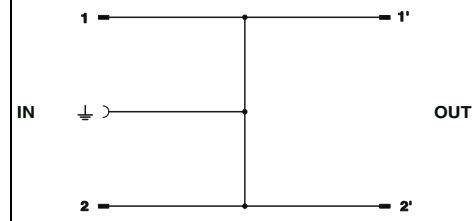

**LSA-PLUS grounding plug**

Low signal levels at high frequencies require special protective circuits in data processing and telecommunications. The arresters must guarantee short reaction times to quickly limit the surge voltages to safe values, without impairing signal quality. In addition, the protective devices support system-specific connections, such as RJ45 or D-SUB connectors, and all types of network topology.

### DATATRAB DT - The all-round solution for protecting data interfaces

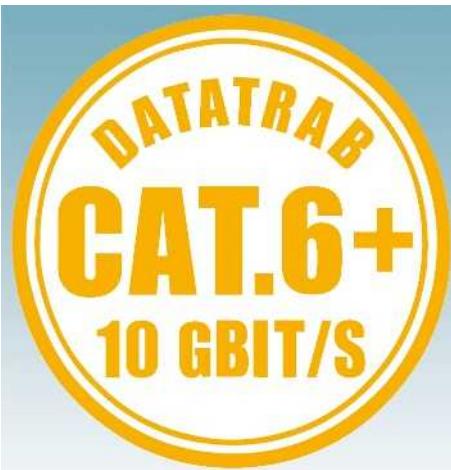

DATATRAB DT reliably protects high-speed networks against damage caused by surge voltages. DT-LAN-CAT.6+ supports various data protocols at very high transmission speeds, such as Ethernet, Power over Ethernet (PoE), ISDN, token ring, and DS1, in a single device.

The housing has a ground connection snap-on foot into which the ground connection cover with equipotential bonding cable is inserted. DATATRAB can be therefore used either as an adapter or a DIN rail module after removing the ground connection cover.

**Use**

Protective devices suitable for all common applications including Ethernet, token ring, CDDI, ISDN, DS1, DSL, analog telecommunications, RS-485, RS-232, V.11, etc. are available.

The circuit breakers also support Power over Ethernet (PoE) in Mode A and B versions.

**Speed**

Used in EDP systems with a transmission speed of up to 10 Gbps (CAT.6/CLASS E<sub>a</sub>) and in telecommunications networks with 16 Mbps (ADSL2+).

**Versatile**

The DATATRAB product range can offer a suitable protective device for many and varied applications. The protective devices are simply installed between the signal paths with interfaces for RJ11/12, RJ45, D-SUB, or screw connection.

**Other designs**

Other application-specific protective devices include:

- Two-part plug-in protective devices in the PLUGTRAB product range
- Combined adapters for the power supply and MAINTRAB interfaces
- Narrow plug-in arresters for COMTRAB modular marshalling distributors

# Surge protection and interference filters

## Surge protection for information technology and telecommunications

### Surge protection for Ethernet/ PROFINET networks with twisted pair cabling

#### DT-LAN-CAT.6+

- Suitable for category 6 high-speed data networks
- Reliable transmission rates up to 10 Gbps
- Protective adapter for eight signal paths via RJ45 connector
- Can be installed in a control cabinet by removing a ground connection adapter

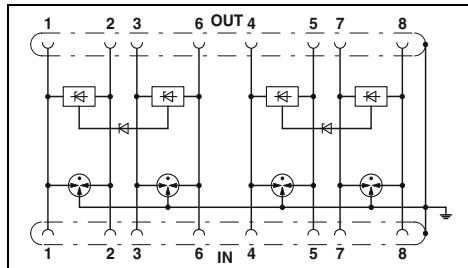

#### Notes:

For certifications, see page 154

## Surge protection for TTY interfaces

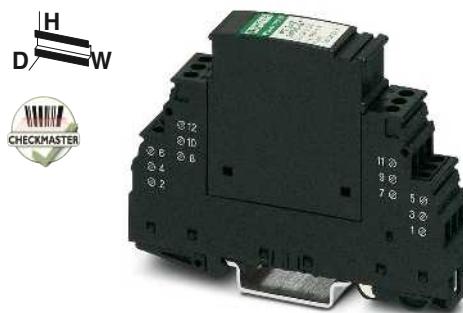

- For floating signal circuits or signal cables
- Low voltage limitation
- Fast response
- High discharge capacity
- Connectors can be checked with CHECKMASTER

## Pin configuration PT 2x2-24DC....:

- 1/5 data line pair A
- 7/11 data line pair B
- 3  $\frac{1}{2}$

## Notes:

For certifications, see page 154

Attenuation characteristics at [www.phoenixcontact.net/products](http://www.phoenixcontact.net/products)

Two double wires (loops), floating, for 20 mA current loops

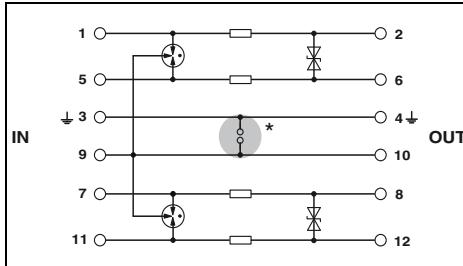

## \* Note:

Various grounding options for the base elements:

**PT .x.-BE** connections 9/10 (GND) directly connected to the mounting foot.

**PT .x.+F-BE** connection 9/10 (GND) connected to the mounting foot via a gas-filled surge arrester.

Total width 17.7 mm

## Surge protection for information technology and telecommunications

### Surge protection for RS-485 interfaces

#### PLUGTRAB PT 5-HF

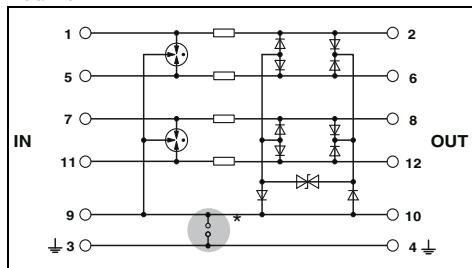

- High transmission speed
- Fast response time
- High discharge capacity
- Connectors can be checked with CHECKMASTER

<b>Notes:</b>
For certifications, see page 154
Attenuation characteristics at <a href="http://www.phoenixcontact.net/products">www.phoenixcontact.net/products</a>

Plug-in arrester with screw connection, for five conductors, with common reference potential

Total width 17.7 mm

#### PLUGTRAB PT-IQ 5-HF

- Surge protection system
- Collective message about supply and remote module
- Multi-level, floating remote signaling
- System supplied via DIN rail bus
- PT-IQ...-UT base element with screw connection technology
- PT-IQ...-PT base element with push-in connection technology

#### Pin assignment PT 5-HF...:

- 1,5 Data line pair 1 T(A)/T(B)
- 7,11 Data line pair 2 R(A)/R(B)
- 9 Signal ground (Ground)
- 3  $\pm$

#### DATATRAB DT-UFB-485

- Adapter type
- 9-pos. D-SUB connection
- DIN rail mounting possible by removing the cap

#### Pin assignment DT-UFB-485:

- 3,8 Data line pair 1 T(A)/T(B)
- 4,9 Data line pair 2 R(A)/R(B)
- 2,7 Signal ground (Ground)
- $\pm$   $\pm$

#### \* Note:

Various grounding options for the base elements:

**PT .x.-BE** connections 9/10 (GND) directly connected to the mounting foot.

**PT .x.+F-BE** connection 9/10 (GND) connected to the mounting foot via a gas-filled surge arrester.

# Surge protection and interference filters

## Surge protection for information technology and telecommunications

### For power supply and ISDN-S<sub>0</sub> interface

#### Notes:

For certifications, see page 154

#### MNT-ISDN

- Compact protection for termination devices
- Easy operation
- Combined power supply and ISDN protection
- Connection to telecommunications socket using separate cable
- Thermal monitoring of the protective circuit
- Green LED - operating indicator for the power supply

For network and ISDN/RDSI systems/termination devices, with RJ45 connection

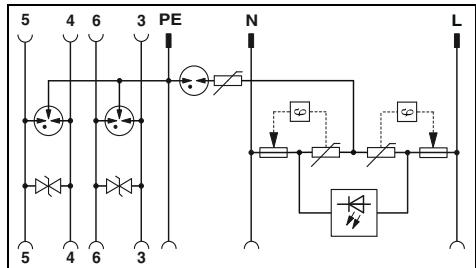

#### DT-LAN-CAT.6+

- Protective adapter for eight signal paths via RJ45 connector
- Can be installed in a control cabinet by removing a ground connection adapter

#### WT-RJ 45-S/ISDN 1/K AP

- Surface-mounted socket
- With RJ45 socket as IAE
- Optimum in-house protection for sensitive interfaces

Total width 63 mm

## Surge protection for information technology and telecommunications

### Surge protection for analog and DSL telecommunication systems

#### PT 2-TELE

- For analog telecommunications
- Two-piece, plug-in
- Universal use
- High discharge capacity
- Connectors can be checked with CHECKMASTER

<b>Notes:</b>
For certifications, see page 154
Attenuation characteristics at <a href="http://www.phoenixcontact.net/products">www.phoenixcontact.net/products</a>

#### DT-TELE-RJ45

- For analog and digital (DSL) telecommunications interface
- Connection: RJ45 socket and/or plug-in screw terminal blocks
- The adapter included enables conversion from RJ45 to RJ11 and RJ12 (for contacting, see circuit diagram)
- International use thanks to multiple assignment
- DIN rail mounting possible by removing the cap

#### CTM...

- For analog telecommunications
- Plug-in module
- Can be used in LSA-PLUS disconnect/control strips or CT-TERMIBLOCK
- Connectors can be checked with CHECKMASTER

## Surge protection for transceiver systems

### You won't lose reception with COAX-TRAB

Transceiver systems are generally considered to be particularly susceptible to surge voltages. Antenna cables which extend beyond a building and are usually very long, plus the antennas themselves, are directly exposed to atmospherical discharge.

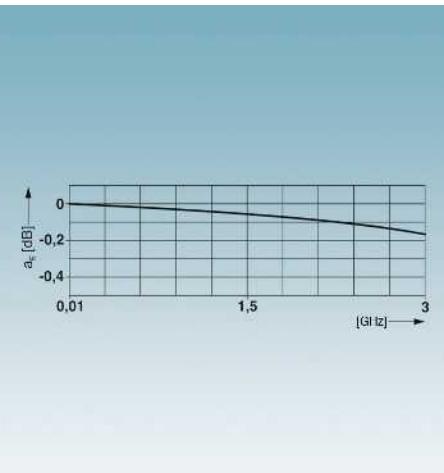

Cables with a coaxial structure and therefore favorable EMC properties are primarily used in antenna systems. However, the risk of surge voltage coupling in antenna cables and potential transfer through to the sensitive interfaces of transceiver systems is not eliminated.

Thanks to interface-optimized surge protective devices, the COAXTRAB product range significantly increases safety for transceiver equipment. The aim of such safety measures is to increase the availability and operability of the devices affected.

### Shielding

Good shielding properties are vital for a clean transmission. The rugged metal housings provide ideal shielding properties and are also suitable for use in harsh industrial environments.

### Customized products

Appropriate protective devices are available for all applications including SAT receiver systems, mobile phones, and video monitoring.

The very low attenuation values ensure that data transmission is clean.

### Performance classes

The protective devices conform to standards in all performance classes. This applies for coarse protection in accordance with Category D1, 10/350 µs and for fine protection in accordance with Category C1, 8/20 µs.

### Connection technology

The right connection technology to suit the application: F connector, TV connector, type N, 7/16, UHF, BNC, SMA.

# Surge protection and interference filters

## Surge protection for transceiver systems

### Protective adapters with coaxial connection

#### COAXTRAB

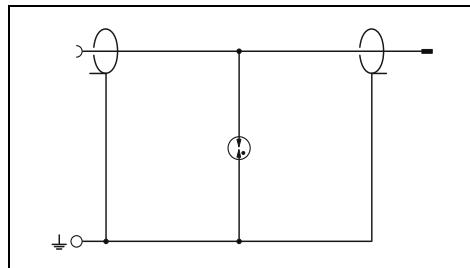

- For antennas with N and BNC connection
- High transmission capacities even for frequencies up to 6 GHz
- Mounting plate enables fixed mounting, e.g., in a control cabinet
- The protective adapters can also be used in a  $75\ \Omega$  system with  $50\ \Omega$  BNC connectors

<b>Notes:</b>

**Description**

**COAXTRAB**, protective adapter for antenna connections with Lambda/4 technology

Female/female

Male/female

**Surge protection for UMTS and quad-band GSM antenna, with SMA connector and SMA coupling**

# Surge protection and interference filters

## Surge protection for transceiver systems

### Protection for antenna inputs of radio and television equipment

#### C-SAT-BOX

- Protection for antenna inputs in satellite receiver technology
- Use before antenna distributor or multi-switch
- Analog and digital SAT signals
- Terrestrial antenna signals
- Direct wall mounting supported

#### C-TV-SAT and C-TV/HIFI

- Protective adapter for antenna connections
- Use on broadband cable or SAT connection
- TV or F connector

### SFP-TRAB

#### Reliable signals with mains interference filter

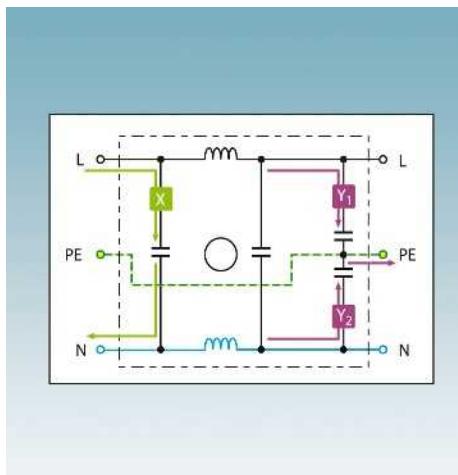

Switching operations triggered mechanically or electronically generate pulse-like and high-frequency interference voltages. These voltages spread in an unimpeded manner across the cable network. All the devices within this cable network are affected. Data errors, uncontrolled functions, and system crashes can result, with data processing devices at particular risk.

#### Interference voltage filters for power supply units

Interference filters limit conducted high-frequency interference voltages. Devices used in data processing or automation particularly benefit from a clean power supply. The end result is safe operation and reliable measured results.

#### Interference filters with type 3 surge protection

Interference filters with integrated type 3 surge protection have two tasks: they absorb surge voltages and also limit high-frequency interference voltages.

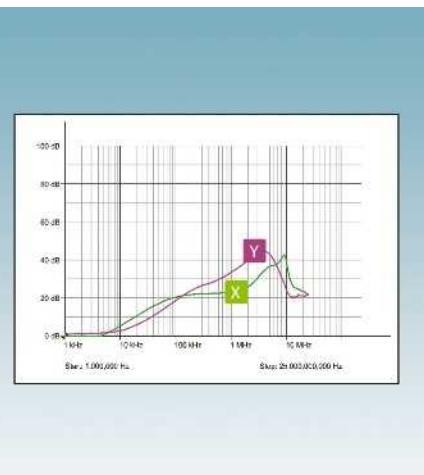

### Mains interference filters - operating principle and range

#### Filtering of symmetrical disturbance variables

**X** - Interference voltages between the phase and neutral conductor are filtered.

#### Filtering of asymmetrical disturbance variables

**Y<sub>1</sub>,Y<sub>2</sub>** - The opposite grounded interference voltages from phase to PE and from the neutral conductor to PE are filtered.

#### Operating range of filters

An attenuation curve diagram illustrates the effective operating range of mains interference filters. The relevant frequency-dependent attenuation can be read according to the symmetrical or asymmetrical filter circuit.

# Surge protection and interference filters

## EMC solutions

### DIN-rail-mountable device protection with SFP-TRAB interference filter

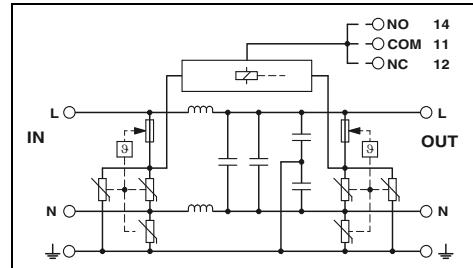

- Combined protective circuit for absorbing transient surge voltages and high-frequency interference voltages
- Thermal monitoring of the protective circuit
- Disconnection status signaled via floating remote indication contact
- Can be installed in industrial environments

<b>Notes:</b>

# Surge protection and interference filters

## EMC solutions

### TERMITRAB

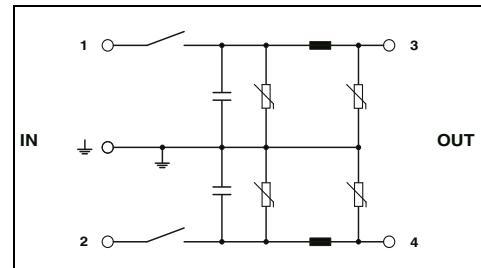

- Combined protective circuit for absorbing transient surge voltages and high-frequency interference voltages
- With spring-cage connection
- Disconnection of signal circuits by disconnect knife

Notes:
For certifications, see page 154
Attenuation characteristics at <a href="http://www.phoenixcontact.net/products">www.phoenixcontact.net/products</a>

Protection for two conductors with a common reference potential

Total width 6.2 mm

### Technical data

Electrical data	
IEC category / EN type	C1 / C3
Maximum continuous operating voltage $U_c$	DC/AC 38 V DC / 30 V AC
Nominal load current $I_L$	0.5 A (55°C)
Nominal discharge surge current $I_n$ (8/20) $\mu$ s	
Total surge current (8/20) $\mu$ s	Core-Ground 350 A
Output voltage limitation at 1 kV/ $\mu$ s	700 A
Cut-off frequency $f_g$ (3 dB)	Core-Ground $\leq 70$ V
Resistance per path	Asymmetrical in the 50 $\Omega$ system Typ. 60 kHz
Inductance per path	0.5 $\Omega$
Capacitance per path	100 $\mu$ H (per path) 130 nF
General data	
Connection data solid / stranded / AWG	0.2 ... 4 mm <sup>2</sup> / 0.2 ... 2.5 mm <sup>2</sup> / 24 - 12
Temperature range	-40 °C ... 85 °C
Degree of protection in acc. with IEC 60529/ EN 60529	IP20
Inflammability class in acc. with UL 94	V2
Test standards	IEC 61643-21/A1 / EN 61643-21/A1

## Surge protection and interference filters

### Test device

#### CHECKMASTER – the arrester test system

Lightning protection systems must be regularly tested in accordance with the requirements of IEC 62305-3 and official regulations. A basic visual check is not enough to identify surge protective devices that were previously damaged. Only an electrical check using the CHECKMASTER produces meaningful results. The test device checks all the relevant components of an arrester. The nominal data of protective elements, such as spark gaps, varistors, gas-filled surge arresters, and suppressor diodes, is tested in a single test cycle.

The CHECKMASTER offers real advantages for safety in all sectors where a high level of system availability is crucial.

## User-friendly and reliable testing of plug-in arresters in just four steps

### 1. Easy selection

The CHECKMASTER has a modular design. Various test sockets are compatible with the various plugs. Further information about the test sockets required can be found on the next page.

### 2. User-friendly scanning

The barcodes on the surge protective devices present a fast and error-free solution for entering items. System-specific abbreviations or user-defined IDs can be entered via the operator interface or read in from the individually created barcode labels.

### 3. Safe testing

When started, an automatic test process is run which checks the arresters with regard to their specific electrical properties. The results are visualized via the display and via two signal lamps.

The protective plug is OK and can be used.

The protective plug has been damaged – replacement is recommended.

The protective plug is faulty and must be replaced.

### 4. Fast logging

The tests are documented according to IEC 62305-3. In addition to the immediate processing of all test values, the CHECKMASTER also allows the contents of the internal memory to be exported directly to an Excel worksheet, for example.

# Surge protection and interference filters

## Test device

### CHECKMASTER

- Modular test device for virtually all plug-in surge arresters from Phoenix Contact
- Corresponding test sockets are available for the arrester connectors
- Test sockets can be easily changed
- Easy operation thanks to barcode scanner or keypad
- Optional entry of system-specific name for protective devices
- Documentation of test results

Notes:
Dimensional drawing at: <a href="http://www.phoenixcontact.net/products">www.phoenixcontact.net/products</a>
The programming cable has a special pin assignment. It can be used only to update the CHECKMASTER software!
1) EMC: Class A product, see page 287

Arrester test device

**The test socket for PLUGTRAB PT is included in the scope of supply of the CHECKMASTER.**

### Case for transporting test sockets

#### PA-CASE

- Six padded compartments
- Sufficient space for all connecting cables
- The test adapters are not supplied as standard with the PA-CASE.

### CM-KBL-RS232/USB

- Adapter cable
- For connection of the test device to a laptop/PC

### CM-KBL-PROG

- Necessary for updating CHECKMASTER firmware

Free software for updating CHECKMASTER can be found at the Download Center on Phoenix Contact's homepage.

The operation of the CHECKMASTER and that of the CM-PA sockets do not meet the general protection requirements for residential areas. Please take the appropriate precautions.

# Power supply units and UPS

## For maximum system availability

### Power supply units

Thanks to high-quality products featuring leading technology, our QUINT, TRIO, MINI, UNO, and STEP POWER product ranges optimally equip you for international competition.

### DC/DC converter

Change the voltage level, regenerate the voltage at the end of long cables or enable the creation of independent supply systems with the QUINT and MINI DC/DC converters.

### Redundancy modules

A redundant power supply system is the result of the parallel connection of two power supply units. Optimize this solution with the QUINT ORING redundancy modules and the QUINT, TRIO, and STEP diodes for maximum system availability.

### Uninterruptible power supply (UPS) units for control cabinets

IQ technology is the key to an intelligent power supply solution. The UPS monitors and optimizes the power storage device. Avoid interruptions when working with the intelligent UPS for non-stop power.

### Uninterruptible power supply (UPS) for 19" racks/towers

Protect all connected loads against any faults on the mains side with the single-phase VFI-SS-111 UPS devices.

# Power supply units and UPS

## Power supply units

**Leading technology and high quality - power supply units ensure your system is always reliably supplied with power.**

Thanks to high-quality products featuring leading technology, with our power supply solutions from the QUINT, TRIO, MINI, and STEP product ranges, you are optimally equipped to handle competitors on an international scale.

Functionality, performance class, and design are tailored to the demands of various different sectors and always offer the ideal solution. Choose from our wide range of power supply units and DC/DC converters.

### QUINT POWER for maximum system availability

Cost-effective selective fuse protection with SFB technology:

In order to trip standard circuit breakers magnetically and quickly, power supply units must be able to supply several times the nominal current for a short period. With SFB (Selective Fuse Breaking) technology, which supplies up to 6 times the nominal current for 12 ms, a dynamic power reserve is available. Faulty current paths are selectively switched off, the fault is isolated, and important system components remain operational.

#### Preventive function monitoring:

Comprehensive diagnostics are provided through constant monitoring of the output voltage and output current. This preventive function monitoring visualizes critical operating states, before errors can occur. The remote monitoring takes place by means of active switching outputs and floating relay contacts.

#### POWER BOOST power reserve:

The static power reserve offers up to 1.5 times the nominal current permanently. At ambient temperatures of up to +40°C the POWER BOOST is continuously available and at higher temperatures, it is available for a few minutes. This ensures that both high inrush currents of capacitive loads, as well as loads with DC/DC converters in the primary circuit, can be reliably supplied.

### Power supply units - a comparison of the advantages

Choose the range of power supply units that best suits your requirements based on ① functionality and ② power.

### QUINT POWER – power supply units for maximum system availability

The unique SFB technology and preventive function monitoring maximize the availability of your application.

- Quick tripping of the standard power circuit breakers
- Preventive function monitoring
- Reliable starting of heavy loads

### TRIO POWER - basic functionality at the highest level

Basic functionality combined with high quality and reliability - this makes the power supply units ideal for use in standard machine production.

- Robust design
- Minimize installation costs
- High operational reliability

### UNO POWER - compact basic functionality

The UNO POWER power supply units offer extremely compact basic functionality.

- Save energy thanks to high efficiency and low idling losses
- Wide-range input
- Wide temperature range

### MINI POWER - for measurement and control technology

The MINI POWER comes into its own in fields where modular electronics housing has become the standard.

- Service-friendly connection technology: encoded COMBICON plug-in connectors
- Active function monitoring with switching output for remote monitoring of the output voltage

### STEP POWER - for installation distributors and flat control panels

The low idling losses and high efficiency make the STEP POWER the most energy efficient in its class.

- Flexible: snap onto the DIN rail or screw onto a level surface
- Energy savings: maximum energy efficiency and incredibly low idling losses

### QUINT POWER power supply units – for maximum system availability

#### QUINT POWER, 3 AC, 24 V DC

- High system availability even in the event of a permanent phase failure
- High surge strength of up to 6 kV thanks to integrated gas-filled arresters
- Quick tripping of standard circuit breakers thanks to the dynamic power reserve SFB (selective fuse breaking) technology with up to 6x the nominal current for 12 ms
- Reliable starting of heavy loads with the static POWER BOOST power reserve with permanently up to 1.5 times the nominal current
- Preventive function monitoring warns against critical operating states before errors occur
- Approved according to SEMI F47: all 24 V DC

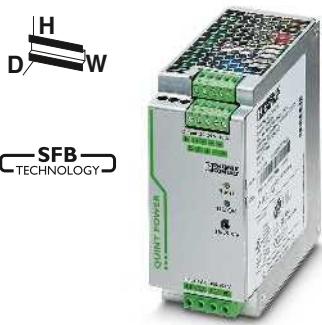

Power supply,  
3 AC, 24 V DC, 5 A

# Power supply units and UPS

## Power supply units

### QUINT POWER power supply units – for maximum system availability

#### QUINT POWER, 3 AC, 48 V DC

- Quick tripping of standard circuit breakers thanks to the dynamic power reserve SFB (selective fuse breaking) technology with up to 6x the nominal current for 12 ms
- Reliable starting of heavy loads with the static POWER BOOST power reserve with permanently up to 1.5 times the nominal current
- Preventive function monitoring warns against critical operating states before errors occur
- Adjustable output voltage of 30 to 56 V DC

**Power supply,  
3 AC, 48 V DC, 20 A**

SELV UL 62368 CB  
Ex: UL 62368

#### Technical data

##### Input data

Nominal input voltage range  
Input voltage range AC/DC  
Frequency range  
Current consumption (nominal load)  
Inrush current limitation at 25°C (typ.) / I<sup>2</sup>t  
Mains buffering (I<sub>N</sub>, typ.)

3x 400 V AC ... 500 V AC  
320 V AC ... 575 V AC / 450 V DC ... 800 V DC  
45 Hz ... 65 Hz / 0 Hz  
3x 2.1 A (400 V AC) / 3x 1.7 A (500 V AC)  
< 20 A / < 1 A·s  
> 25 ms (400 V AC) / > 35 ms (500 V AC)

##### Output data

Nominal output voltage  
Setting range of the output voltage

48 V DC ±1%  
30 V DC ... 56 V DC (> 48 V constant capacity)

##### Output current / POWER BOOST / SFB (12 ms)

Magnetic fuse tripping

20 A / 22.5 A / 100 A

Can be connected in parallel / series

B2 , B4 , B4 , B10 , C2 , C4 , C6

Max. power dissipation (no load / nominal load)

Yes / Yes

Efficiency (typ.)

24 W / 70 W

Residual ripple

> 93 % (at 400 V AC and nominal values)

Signaling

< 50 mV<sub>PP</sub>

Signaling DC OK

LED, active switching output, relay contact

Boost signaling

LED, active switching output

##### General data

Weight / Dimensions W x H x D

2.5 kg / 96 x 130 x 176 mm

Spacing when mounting

Alignable: 5 mm horizontally, 15 mm next to active components, 50 mm vertically

Connection method

Screw connection

Input connection data (solid/stranded/AWG)

0.2 - 6 mm<sup>2</sup> / 0.2 - 4 mm<sup>2</sup> / 18 - 10

Output connection data (solid/stranded/AWG)

0.5 - 16 mm<sup>2</sup> / 0.5 - 16 mm<sup>2</sup> / 8 - 6

Signal connection data (solid/stranded/AWG)

0.2 - 6 mm<sup>2</sup> / 0.2 - 4 mm<sup>2</sup> / 18 - 10

Degree of protection / Protection class

IP20 / I

MTBF (EN 29500, 40°C)

> 509000 h

Ambient temperature (operation)

-25 °C ... 70 °C (> 60°C derating, startup at -40°C type-tested)

##### Standards/regulations

2 kV AC (routine test) / 4 kV AC (type test)

Conformance with EMC Directive 2004/108/EC

IEC 60950-1/VDE 0805 (SELV)

EN 50178/VDE 0160 (PELV)

# Power supply units and UPS

## Power supply units

**TRIO POWER power supply units – basic functionality at the highest level**

### TRIO POWER, 600 V DC, 24 V DC

- Connection to 600 V DC intermediate circuits of frequency inverters: in the event of a line supply failure, 24 V loads are supplied using the kinetic energy of the motor. In this way, the motor acts as a generator and supplies energy to the intermediate circuits (e.g., in plastic injection molding machines).

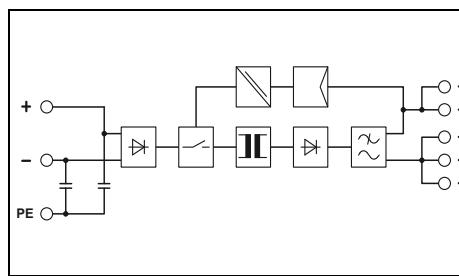

Power supply,  
600 V DC, 24 V DC, 20 A

Power supply,  
1 AC, 12 V DC, 5 A

### TRIO POWER, 1 AC, 12 V DC and 48 V DC

- Adjustable output voltage of 10 to 18 V DC, or 30 to 56 V DC

# Power supply units and UPS

## Power supply units

### MINI POWER power supply units - for measurement and control technology

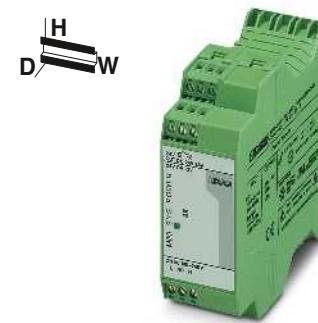

#### MINI POWER, 1 AC, 24 V DC

- Easy-to-maintain connection method thanks to keyed COMBICON connector
- Remote monitoring of output voltage via switching output

#### MINI POWER, 1.5 A

- Flat power supply units with a depth of just 95 mm
  - Optional: DIN rail connector for supplying other modules
- Per power supply:  
2 x ME 17,5 TBUS 1,5/5-ST-3,82 GN  
(Order No.: 2709561)

Power supply,  
1 AC, 24 V DC, 1.3 A

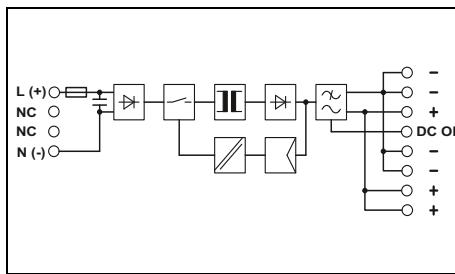

Ex:

Power supply unit, 1 AC, 24 V DC, 1.5 A,  
flat design, optional DIN rail connector

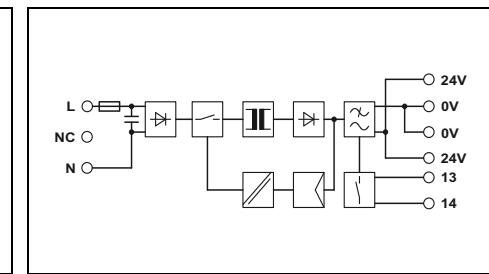

Ex:

#### MINI POWER, 100 W

- Output power limited to 100 W: specifically for applications that require certification according to UL 1310/508 Listed Class 2

## Power supply units

### MINI POWER power supply units - for measurement and control technology

#### MINI POWER, 1 AC, 5 to 15 V DC

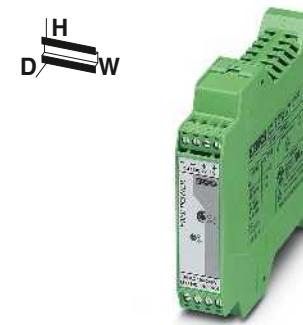

- Easy-to-maintain connection method thanks to keyed COMBICON connector
- Remote monitoring of output voltage via switching output

#### MINI POWER, 5 and 10 - 15 V DC

- Adjustable output voltage of 4.5 to 5.5 V DC, or of 10 to 15 V DC

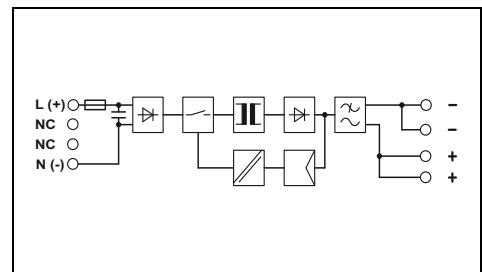

#### MINI POWER, ±15 V DC

- For supplying operational amplifiers

Power supply,  
1 AC, 5 V DC, 3 A

# Power supply units and UPS

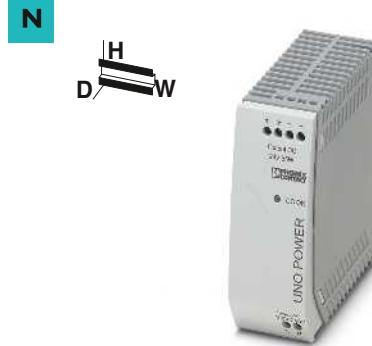

## Power supply units

### UNO POWER power supply units - compact basic functionality

- More space in the control cabinet with up to 20% higher power density
- Height of housing is just 84 mm, suitable for all 120 mm control cabinets
- Maximum energy efficiency: energy savings with over 90% efficiency and extremely low idling losses under 0.3 W

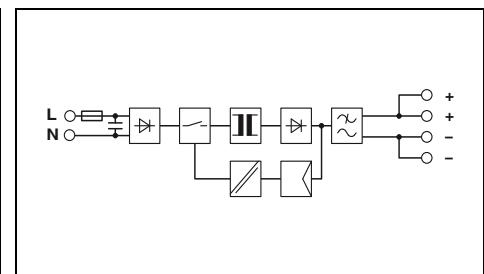

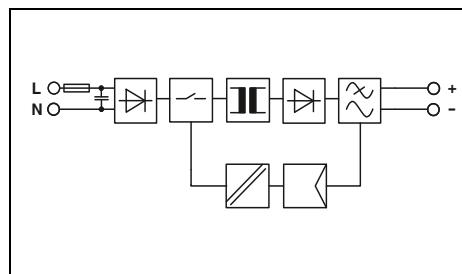

Power supply, 1 AC, 24 DC, 30 W

Power supply, 1 AC, 24 DC, 60 W

# Power supply units and UPS

## Power supply units

### STEP POWER - power supply units for distributor boards and flat control panels

#### STEP POWER, 1 AC, 24 V DC

- Flexible assembly by simply snapping the product onto the DIN rail or screwing it onto an even surface
- Energy savings thanks to maximum energy efficiency and incredibly low no-load losses
- Wide temperature range from -25°C to +70°C
- Reliable power supply thanks to the high MTBF (mean time between failures) of more than 500,000 hours and the UI characteristic curve

Power supply,  
1 AC, 24 V DC, 0.5 A

#### STEP POWER, 24 V DC, 0.5 A

- Slim design with a design width of just 18 mm (1 pitch)

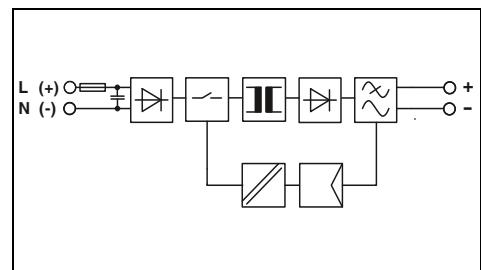

#### STEP POWER, 24 V DC, 0.75 A

- Flat design with a depth of just 43 mm

#### STEP POWER, 48 V AC, 0.5 A

- Connection to 48 V AC operating networks
- Slim design with a design width of just 18 mm (1 pitch)

UL c UL CB scheme

## Power supply units

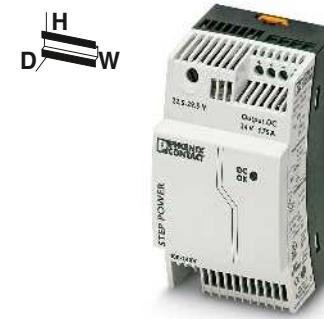

### STEP POWER - power supply units for distributor boards and flat control panels

#### STEP POWER, 1 AC, 24 V DC

- Flexible assembly by simply snapping the product onto the DIN rail or screwing it onto an even surface
- Energy savings thanks to maximum energy efficiency and incredibly low no-load losses
- Wide temperature range from -25°C to +70°C
- Reliable power supply thanks to the high MTBF (mean time between failures) of more than 500,000 hours and the UI characteristic curve
- Adjustable output voltage of 22.5 to 29.5 V DC

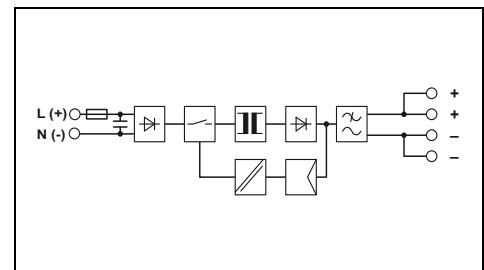

#### STEP POWER, 100 W

- Output power limited to 100 W: specifically for applications that require certification according to UL 1310/508 Listed Class 2
- Approved for DeviceNet™

Power supply,  
1 AC, 24 V DC, 1.75 A

# Power supply units and UPS

## Power supply units

### STEP POWER - power supply units for distributor boards and flat control panels

#### STEP POWER, 1 AC, 5 to 48 V DC

- Flexible assembly by simply snapping the product onto the DIN rail or screwing it onto an even surface
- Energy savings thanks to maximum energy efficiency and incredibly low no-load losses
- Wide temperature range from -25°C to +70°C
- Reliable power supply thanks to the high MTBF (mean time between failures) of more than 500,000 hours and the UI characteristic curve

#### STEP POWER, 5 V DC, 2 A

- Slim design with a design width of just 18 mm (1 pitch)

#### STEP POWER, 5 V DC, 6.5 A

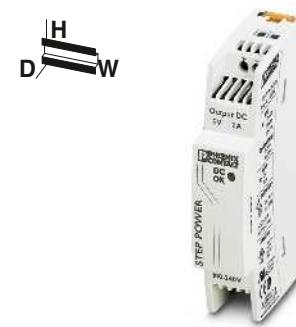

- Adjustable output voltage of 4 to 6.5 V DC

#### STEP POWER, 15 V DC, 4 A

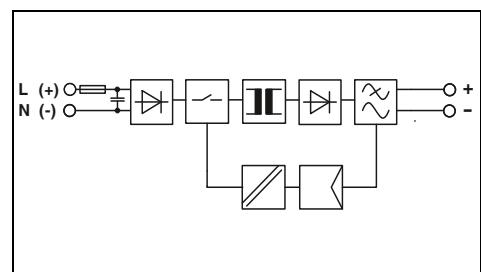

- Adjustable output voltage of 10 to 16.5 V DC

#### STEP POWER, 48 V DC, 2 A

- Adjustable output voltage of 30 to 56 V DC

Power supply,  
1 AC, 5 V DC, 2 A

## **Power supply units and UPS**

## Power supply units

## **Power supply units for extreme ambient conditions**

#### **QUINT POWER, dip-coated**

With ATEX approval for maximum system availability under extreme ambient conditions, such as dust, dirt, corrosive gases, and 100% humidity

- Complies with standard EN 60079-15 and may be installed in a potentially explosive area.
  - They are suitable for use in Class I, Division 2, Groups A, B, C, D

**Power supply,  
dip-coated,  
1 AC, 24 V DC, 5 A**

**Power supply,  
dip-coated,  
1 AC, 24 V DC, 10 A**

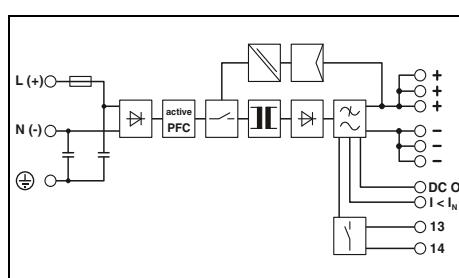

## MINI POWER EX

Corresponds to standard EN 60079-15

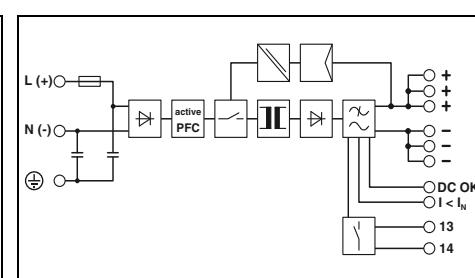

- Installation within potentially explosive area in which category 3G items are necessary

## Notes:

**MINI-PS...**: DIN rail connector (optional), for routing through the supply voltage and data signal, two required per device (ME 17,5 TBUS 1,5/5-ST-3,81 GN, 2709561).

## DC/DC converters

**QUINT and MINI DC/DC converters** alter the voltage level, regenerate the voltage at the end of long cables, or enable the creation of independent supply systems by means of electrical isolation.

There are numerous fields of application for DC/DC converters. As the name suggests, they convert voltages in order to match different voltage levels to one another. On long supply lines, they raise the voltage to compensate for voltage drops.

DC/DC converters separate circuits from each other using electrical isolation and protect the sensitive loads by decoupling them. The primary-switched switching devices have an internal intermediate circuit. This acts as a filter. This means, for example, that grounded and ungrounded circuits can be kept separate. A further advantage is the protection of critical loads from damaging voltage fluctuations: if, for example, a motor is switched on that requires a higher current for the starting torque, there is a short voltage dip. The same occurs when loads with high input capacities are switched on. Troubleshooting these temporary faults is often difficult and time-consuming.

DC/DC converters are also ideal in battery-supported power supply networks or

solutions with unregulated transformers, when sensitive loads require a stable DC.

### QUINT POWER for maximum system availability

Cost-effective selective fuse protection with SFB technology:

In order to trip standard circuit breakers magnetically and quickly, power supply units must be able to supply several times the nominal current for a short period. With SFB (Selective Fuse Breaking) technology, which supplies up to 6 times the nominal current for 12 ms, a dynamic power reserve is available. Faulty current paths are selectively switched off, the fault is isolated, and important system components remain operational.

### Preventive function monitoring:

Comprehensive diagnostics are provided through constant monitoring of the output voltage and current. This constant, preventive monitoring of input voltage, output voltage, and output current visualizes critical operating states before errors can occur. Remote monitoring is provided by means of active switching outputs and floating relay contacts.

### POWER BOOST power reserve:

The static power reserve offers up to 1.25 times the nominal current permanently. At ambient temperatures of up to +40°C the POWER BOOST is continuously available and at higher temperatures, it is available for a few minutes. This ensures that both high inrush currents of capacitive loads, as well as loads with DC/DC converters in the primary circuit, can be reliably supplied.

### For maximum system availability

The unique SFB technology and preventive function monitoring maximize the availability of your application.

- Quick tripping of the standard power circuit breakers
- Preventive function monitoring
- Reliable starting of heavy loads

### Maximum system availability with SFB technology

SFB technology using a frayed display cable as an example:

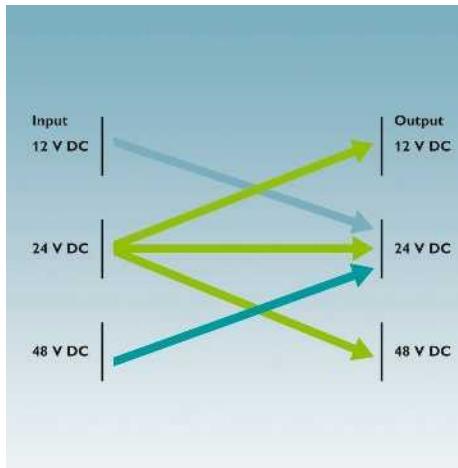

- The fuse triggers immediately, the lower lever display is dark.
- The controller, sensors, and actuators continue to operate without interruption.
- Production continues.

### MINI DC/DC converter - for control technology

MINI DC/DC converters come into their own in fields where modular electronics housing has become the standard.

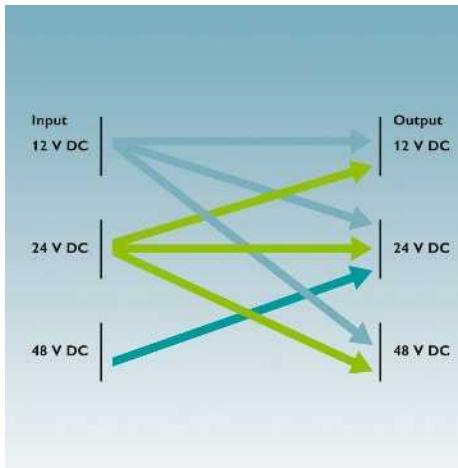

- Service-friendly connection technology with COMBICON encoded plug-in connectors
- Active function monitoring with switching output for remote monitoring of the output voltage

### Voltage levels of QUINT DC/DC converters

The QUINT DC/DC converters alter the voltage level:

- Input voltages: 12 V DC, 24 V DC, 48 V DC
- Output voltages: 12 V DC, 24 V DC, 48 V DC

### Voltage levels of MINI DC/DC converters

The MINI DC/DC converters alter the voltage level:

- Input voltages: 12 V DC, 24 V DC, 48 V DC
- Output voltages: 5...15 V DC, 24 V DC, 48 V DC

### TRIO for frequency inverters

- Direct connection to the 600 V DC intermediate circuit of a frequency inverter
- Mains failure: 24 V loads continue to be supplied using the kinetic energy of the motor. In this case, the motors act as generators and supply energy to the intermediate circuit.

Details about this product can be found on page 178

# Power supply units and UPS

## DC/DC converters

### QUINT DC/DC converters, 24 V DC

- Support conversion to various voltage levels
- Constant voltage: output voltage regenerated even at the end of long cables
- Electrical isolation: for setting up independent supply systems
- SFB technology: fast tripping of standard circuit breakers, thanks to the dynamic power reserve with up to 6 times the nominal current for 12 ms
- Reliable starting of heavy loads thanks to the static POWER BOOST power reserve with permanently up to 125% of the nominal current
- Preventive function monitoring warns against critical operating states before errors occur

12 V DC / 24 V DC, 5 A

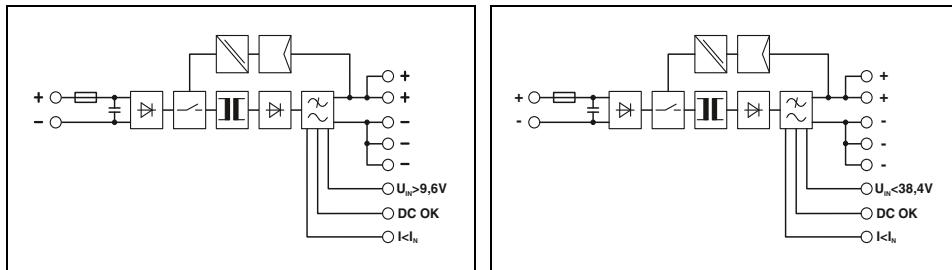

DC/DC converter,  
48 V DC / 24 V DC, 5 A

#### QUINT DC/DC converter, 24 V DC, dip-coated

- For maximum system availability under extreme ambient conditions, such as dust, dirt, corrosive gases, and 100% humidity
- They are suitable for use in Class I, Division 2, Groups A, B, C, D

## DC/DC converters

### MINI DC/DC converters

- Support conversion to various voltage levels
- Constant voltage: output voltage regenerated even at the end of long cables
- Electrical isolation: for setting up independent supply systems

**DC/DC converter,  
12 - 24 V DC / 24 V DC, 1 A**

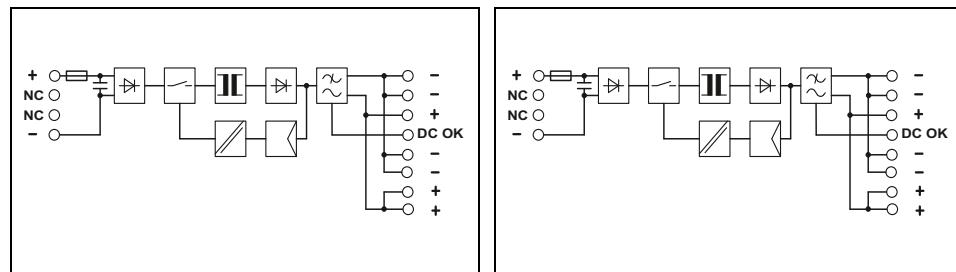

**DC/DC converter,  
12 - 24 V DC / 5 - 15 V DC, 2 A**

### MINI AC power terminal block

- For supplying MINI DC/DC converters from unregulated AC networks
- A transformer's AC voltage is rectified and filtered

## Redundancy modules

### Maximum availability due to redundancy modules

To prevent the effects of errors on the load in a redundant system and increase the operational reliability, power supply units should be decoupled from one another with a redundancy module. Only by doing this, is it possible to ensure that an incorrectly connected power supply unit or a short circuit does not have an effect on the load.

### Simple decoupling with STEP and QUINT DIODE redundancy modules

If the power supply units are decoupled, a short circuit at the output of one of the power supply units or in the supply line from the power supply unit to the diode no longer has any effect on the load.

### Decoupling and monitoring with TRIO DIODE redundancy modules

The redundancy modules check the output voltages of the power supply units, as well as the wiring up to the redundancy module itself. Should one of these pathways short circuit, the load will continue to be supplied. Cable breaks are also detected and reported.

### Decoupling, monitoring, and closed-loop control by means of the QUINT ORING active redundancy modules

The QUINT ORING active redundancy modules monitor the entire redundancy solution. They detect critical operating states and inform the user in good time. For example, faulty wiring or defective cables are reported.

### QUINT ORING redundancy module for maximum system availability

- Constant monitoring of input voltage, output current, and decoupling section
- ACB technology doubles the service life
- Energy savings of 70% by using MOSFETs over diodes
- Two positive output terminals

### ACB technology doubles the service life

The ACB (Auto Current Balancing) technology provides symmetrical loading of the power supply units, thereby reducing the operating temperature. This means up to double the service life of the redundant system.

### Continuous monitoring

QUINT ORING detects critical operating states within the entire supply path and notifies the operator in good time.

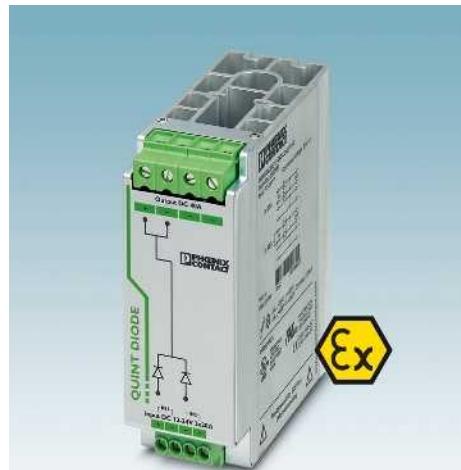

#### Monitoring

- Power supply unit voltages
- Wiring
- Decoupling section
- Load current

### TRIO DIODE redundancy module

- Permanent redundancy monitoring
- Consistent redundancy up to the load
- Flexible: nominal voltages of 12 V DC to 48 V DC

### Redundancy module QUINT DIODE

- Rugged design for currents of up to 60 A
- Consistent redundancy up to the load
- Flexible: nominal voltages of 12 V DC to 48 V DC

### STEP DIODE redundancy module

- Space-saving: design width of just 18 mm
- Consistent redundancy up to the load
- Flexible: nominal voltages of 5 V DC to 24 V DC

# Power supply units and UPS

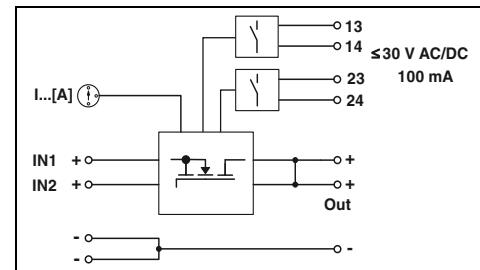

## Redundancy modules

### QUINT ORING, 24 V DC

- Preventive function monitoring: permanent monitoring of the input voltage, output current, and decoupling section
- Continuous redundancy right through to the load: the use of two Plus output terminal blocks makes it possible to devise a redundant wiring concept that runs right through to the load
- Double the service life of the redundant solution thanks to even load distribution: the ACB (Auto Current Balancing) technology automatically and symmetrically distributes the load current to two power supply units operating in parallel
- Save energy: decoupling is achieved with MOSFETs and results in energy savings of up to 70% compared with conventional diodes
- OVP (Over Voltage Protection): surge voltages are limited to 30 V

Active redundancy module  
24 V DC, 2x 10 A, 1x 20 A

## Redundancy modules

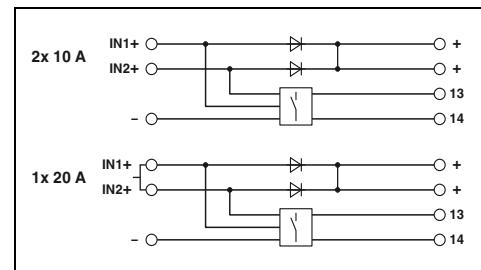

### TRIO DIODE, 12 - 24 and 48 V DC

- Permanent redundancy monitoring: checking of output voltages of parallel-connected power supplies and of wiring running to the redundancy module
- Continuous redundancy right through to the load: the use of two Plus output terminal blocks makes it possible to devise a redundant wiring concept that runs right through to the load
- Flexible: nominal voltages of 12 V DC to 48 V DC

## Redundancy modules

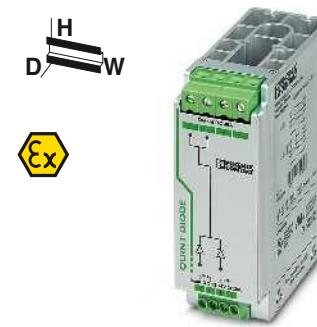

### QUINT DIODE and STEP DIODE diode modules

#### QUINT DIODE, 12 - 24 V and 48 V DC

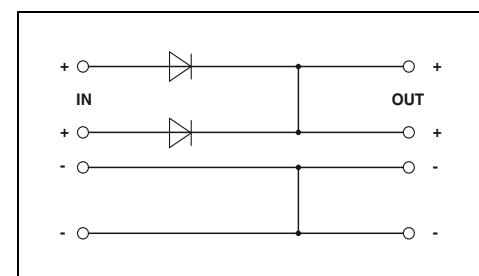

- Rugged design for currents of up to 60 A
- Continuous redundancy right through to the load: the use of two Plus output terminal blocks makes it possible to devise a redundant wiring concept that runs right through to the load
- Flexible: nominal voltages of 12 V DC to 48 V DC
- Complies with standard EN 60079-15 and may be installed in a potentially explosive area

#### STEP DIODE

- Space-saving: design width of just 18 mm
- Continuous redundancy right through to the load: the use of two Plus output terminal blocks makes it possible to devise a redundant wiring concept that runs right through to the load
- Flexible: nominal voltages of 5 V DC to 24 V DC

## Power supply unit accessories

### Mounting on S7-300 rail

To supply a SIMATIC® S7-300 control unit, QUINT POWER 2.5 A, 5 A, and 10 A are mounted on the S7 rail using a QUINT-PS-ADAPTER-S7.

No further accessories are required for fastening.

# Power supply units and UPS

## Uninterruptible power supply units for the control cabinet

### The intelligent UPS system ensures maximum system availability

Uninterruptible power supply (UPS) units continue to deliver power even if the supply network goes down. An uninterruptible solution consists of the three function units shown:

- Power supply
- UPS module
- Power storage

### QUINT UPS-IQ

IQ technology is the key to an intelligent power supply solution. The uninterruptible power supply unit monitors and optimizes the power storage. Avoid interruptions when working with the intelligent UPS for non-stop power.

- **SOC (state of charge)** keeps you informed of the charging state and remaining runtime of your battery at all times
- **SOH (state of health)** reports remaining life expectancy of the power storage device, warns of failure at an early stage
- **SOF (state of function)** determines the current performance capability of the power storage device.

### Practical example

An industrial PC must be continuously supplied with 24 V DC.

#### Previous solution:

The UPS with 3.4 Ah buffers 24 V DC/5 A for 20 minutes under optimum conditions.

Can the power storage device actually bridge this time?

Charging state, performance, and remaining runtime of the power storage device are unknown.

#### The solution is the QUINT UPS-IQ:

The intelligent UPS determines all relevant power storage device states. This ensures the crucial transparency required to guarantee the stability of the supply and optimum use of the power storage device at all times.

The intelligent battery management detects the current charging state of the connected power storage device and uses this to calculate the remaining runtime.

The QUINT UPS-IQ also indicates whether the buffer time is actually 20 minutes. As soon as an adjustable threshold value is reached, a warning message is sent via the floating relay contact, the software or directly to higher-level controllers. The IPC continues working for as long as possible

and is shut down before the battery voltage runs out.

## Uninterruptible power supply units for the control cabinet

**IQ technology**

The IQ technology is intuitive and provides you with information as soon as it is required.

- Intelligent battery management with SOC, SOH, and SOF
- Intelligent battery control
- Intelligent charging
- Data port

**Signaling and configuration**

The UPS-CONF configuration and management software allows you to monitor and configure your UPS system. The software can be downloaded free of charge at: [www.phoenixcontact.net/products](http://www.phoenixcontact.net/products).

- Flexible adaptation of QUINT UPS-IQ behavior to individual requirements
- Monitoring and data recorder

**Communication**

The data cables allow you to integrate the UPS module into your application. You can therefore benefit from all the advantages of IQ technology and be kept informed of the state of your UPS solution. The information provided by QUINT UPS-IQ can, for example, be forwarded to higher-level controllers via Ethernet or be implemented directly in control solutions from Phoenix Contact.

**Modular solution**

1. Choose your power supply unit, e.g., QUINT POWER

2. Choose your UPS module

**QUINT UPS-IQ**

3. Choose your power storage device:
- UPS-CAP for maximum service life
  - UPS-BAT/LI-ION for long service life with long buffer times
  - UPS-BAT/VRLA and VRLA-WTR for maximum buffer times

**UPS with integrated power storage**

Particularly space-saving and easy to retrofit, the UPS module and power storage device are combined in the same housing.

- QUINT UPS: power storage device with lead AGM technology
- STEP UPS: LiPo-based power storage device
- QUINT BUFFER buffer module: capacitor-based power storage device

**UPS with integrated power supply unit**

The UPS module and power supply unit in a single housing is a space-saving solution. Only one power storage device is required to complete the UPS system.

- MINI UPS: for 24 or 12 V DC
- TRIO UPS: for 24 DC

# Power supply units and UPS

## Uninterruptible power supply units for the control cabinet

### Selecting the power storage device for QUINT UPS-IQ

You can always find the ideal solution for maximum system availability with the new modular system for uninterruptible power supply units. The various storage media feature a wide range of different properties: long service life or a very long buffer time, no maintenance or use at extreme ambient temperatures. Whatever your requirements, we have the ideal power storage device.

#### Your advantages

Fast installation

- Automatic detection of the power storage device by QUINT UPS-IQ
- Tool-free replacement during operation

Maximum availability

- Constant communication with QUINT UPS-IQ for continuous monitoring and intelligent management

Extremely long service life

- Optimum charging characteristic according to the technology and ambient conditions

Type	Buffer time (typical)	Temperature	Service life At 20°C	Service life At 50°C	Charging cycles At 20°C	Weight (standardized)
UPS-CAP...	< 5 min.	-40 ... 60°C	> 20 years	8 years	> 500,000	0.4 kg
UPS-BAT/LI-ION...	> 40 min.	-20 ... 58°C	15 years	2 years	7000	0.45 kg
UPS-BAT/VRLA-WTR...	> 5 h	-40 ... 60°C	15 years	1.5 years	300	1.3 kg
UPS-BAT/VRLA...	> 8 h	0 ... 40°C	6 ... 9 years	1 year	250	1 kg

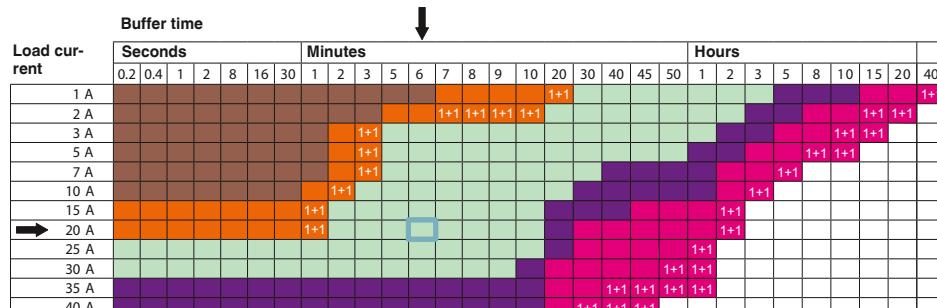

## **Selection of power storage devices with capacitors, lithium ion, and pure lead AGM technology**

## Buffer times for DC UPS modules

Select your UPS-BAT and UPS-CAP for  
24 V DC applications here.

Example: 20 A needs to be buffered for 6 minutes.

Solution: UPS-BAT/LI-ION/24DC/120WH

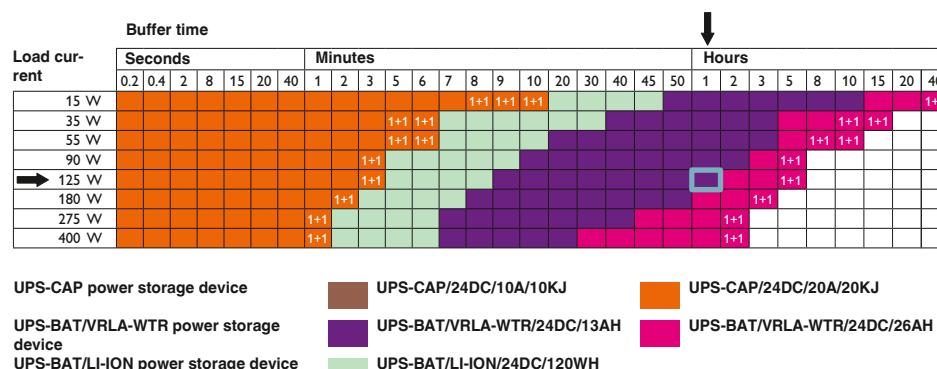

### **Buffer times for AC UPS modules**

Select your UPS-BAT and UPS-CAP for  
120 V AC/230 V AC applications here.

Example: 125 W needs to be buffered for one hour.

Solution: UPS-BAT/VBI A-WTB/24DC/13AH

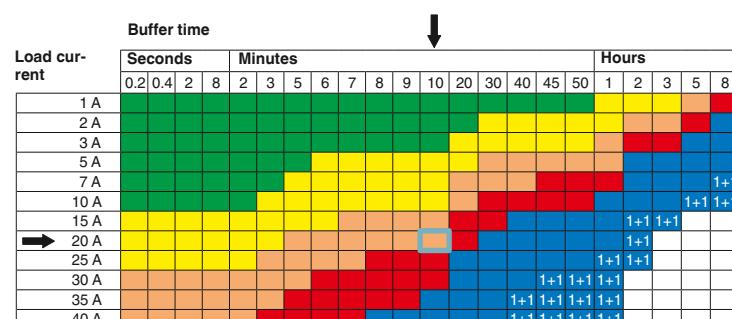

#### **Selection of power storage devices with lead AGM technology**

### **Buffer times for DC UPS modules**

Select your UPS-BAT for 24 V DC applications here

Example: 20 A needs to be buffered for 10 minutes

Solution: UPS-BAT/VBL A/24DC/72AH

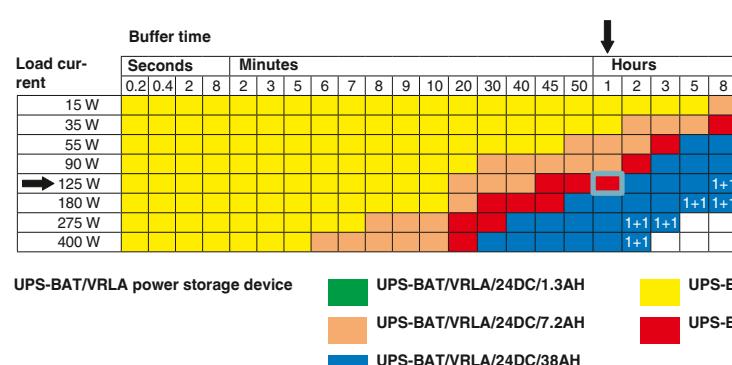

#### **Buffer times for AC UPS modules**

Select your UPS-BAT for 120 V AC/230 V AC applications here.

Example: 125 W needs to be buffered for one hour.

Solution: LIIPS-BAT/VBLA/24DC/12AH

1+1 ... Two rechargeable battery modules of the same capacity are required in this case.

The data is based on an ambient temperature of 20°C.

# Power supply units and UPS

## Uninterruptible power supply units for the control cabinet

### QUINT UPS-IQ for DC applications

The UPS module for 24 V DC with output currents ranging from 5 to 40 A allows you to create a custom solution combining power supply unit, UPS module, and power storage device.

Optimum use of the buffer time and preventive monitoring of the power storage device:

- Detects the current charging state of the power storage device and calculates the remaining runtime
- Calculates the current life expectancy of the power storage device

Substantial power reserve:

- For mains and battery operation
- POWER BOOST static power reserve
- Dynamic power reserve with SFB (Selective Fuse Breaking) technology

Fast battery charging:

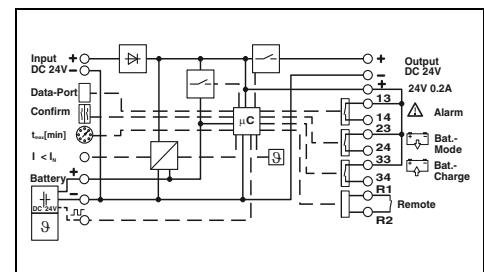

- Adaptive current management charges the power storage device twice as fast as before, while simultaneously providing sufficient energy for the loads.

Extensive signaling and parameterization:

- Floating relay contacts
- Data port
- Parameterization with memory block

Uninterruptible power supply,  
24 V DC / 24 V DC, 5 A

## **Power supply units and UPS**

## **Uninterruptible power supply units for the control cabinet**

## **QUINT UPS-IQ for DC applications with dual output voltage**

The UPS module for two output voltages, 12 and 24 V DC, allows you to create a custom solution combining power supply unit, UPS module, and power storage device.

- Flexible and space-saving thanks to the two output voltages in one unit

Optimum use of the buffer time and preventive monitoring of the power storage device:

- Detects the current charging state of the power storage device and calculates the remaining runtime
  - Calculates the current life expectancy of the power storage device

Substantial power reserve:

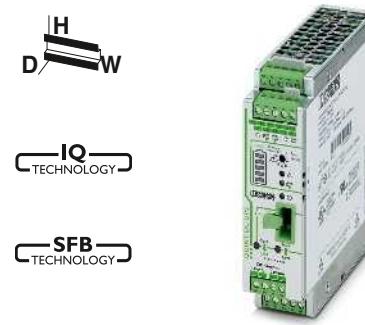

- For mains and battery operation
  - POWER BOOST static power reserve
  - Dynamic power reserve with SFB (Selective Fuse Breaking) technology

Fast battery charging:

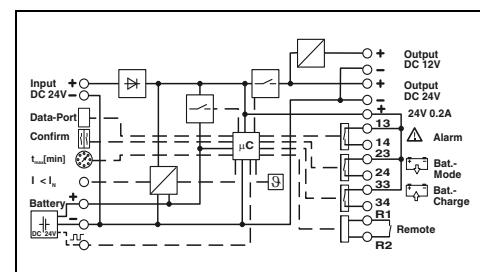

- Adaptive current management charges the power storage device twice as fast as before, while simultaneously providing sufficient energy for the loads.

## Extensive signaling and parameterization:

- Floating relay contacts
  - Data port
  - Parameterization with memory block

**Uninterruptible power supply,  
24 V DC/12 V DC, 5 A and 24 V DC, 10 A**

## Uninterruptible power supply units for the control cabinet

## QUINT UPS-IQ for AC applications

The UPS module for 120 V AC/230 V AC with 400 W/500 VA power can be combined with all UPS-CAP and UPS-BAT power storage devices.

Optimum use of the buffer time and preventive monitoring of the power storage device:

- Detects the current charging state of the power storage device and calculates the remaining runtime
- Calculates the current life expectancy of the power storage device

Worldwide use:

- Input voltages from 96 to 264 V AC
- Storage of the level and frequency of the input voltage, in the event of mains failure, the output is automatically supplied with 120 V AC/60 Hz or 230 V AC/50 Hz
- Manual voltage pre-selection possible

Maximum energy efficiency:

- Offline operation: 98% efficiency for charged power storage device

Extensive signaling and parameterization:

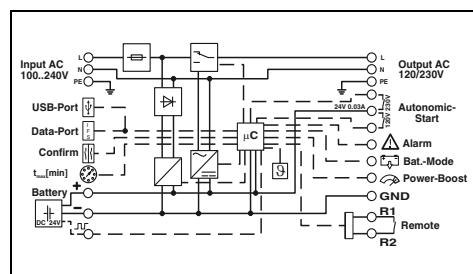

- Switching outputs
- USB interface
- Data port
- Parameterization with memory block

Simplified startup:

- The UPS can be switched on without a power supply network

Uninterruptible power supply,  
1 AC / 1 AC, 500 VA

## Technical data

General input data	80 V AC ... 264 V AC 45 Hz ... 65 Hz $U_N \pm 10\%$ . Can be configured using UPS-CONF software.

## Accessories for QUINT UPS-IQ

### IFS-RS232-DATACABLE

- For Modbus communication with the RS-232 interface
- Connection to the Phoenix Contact COM server for Ethernet communication
- Communicate directly with higher-level controllers, such as Phoenix Contact ILC or RFC, or use as a gateway

### IFS-MINI-DIN-DATACABLE

- For direct communication with the ILC from the Phoenix Contact Inline system

### IFS-OPEN-END-DATACABLE

- Open cable for flexible communication

### QUINT UPS-IQ function blocks

- For further processing of information communicated via data cables
- For PC Worx software
- Free download at [www.phoenixcontact.net/products](http://www.phoenixcontact.net/products)

# Power supply units and UPS

## Uninterruptible power supply units for the control cabinet

### UPS module with integrated power storage

QUINT-UPS is very easy to install in existing systems. It's just a case of connecting a 24 V DC power supply unit upstream and the reliable UPS solution is complete.

- Advantages of using IQ technology
- Minimal wiring effort
- Maintenance-free power storage device with lead AGM technology

#### Notes:

The buffer time associated with your solution is dependent on the load current. Exact details for each uninterruptible power supply can be found on page 233

#### Description

**Power supply, uninterruptible**

## Uninterruptible power supply units for the control cabinet

## Maintenance-free buffer module

The buffer module can accommodate failures lasting several seconds.

It combines an electronic switch-over unit and a capacitor-based power storage device in the same housing.

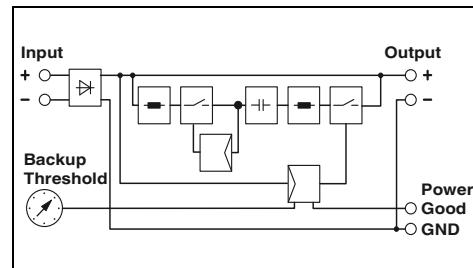

## Notes:

The buffer time associated with your solution is dependent on the load current. Exact details for each uninterruptible power supply can be found on page 233

**Buffer module,

## Buffer times for UPS with integrated power storage

Particularly space-saving and easy to retrofit, the UPS module and power storage device are combined in the same housing. The maintenance-free buffer module is now also available with 40 A load current.

Select your QUINT UPS,  
QUINT BUFFER, and STEP UPS here.  
Example: 5 A needs to be buffered for  
20 minutes.  
Solution: QUINT-UPS/24DC/24DC/10/3.4AH

Note: with the STEP-UPS/12DC/12DC/4,  
buffer times are double those of the  
STEP-UPS/24DC/24 DC/3.

Load current	Buffer time

## Power storage devices for MINI UPS and TRIO UPS

The UPS module and power supply unit are combined in the same housing in a particularly space-saving way. Only one power storage device is required to complete the UPS system.

### MINI UPS

Power storage devices with lead AGM technology for output voltages of 24 or 12 V DC. Buffer times of up to 50 minutes with 1 A load current.

Note: with the MINI-DC-UPS/12DC/4,  
buffer times are double those of the  
MINI-DC-UPS/24DC/2.

### TRIO UPS

Power storage devices with lead AGM technology buffer failures lasting up to 2 hours with 5 A load current.

Select your MINI-BAT and QUINT-BAT for MINI UPS and TRIO UPS here.

Example: 2 A needs to be buffered for 20 minutes.

Solution: MINI-BAT/24DC/1.3AH

# Power supply units and UPS

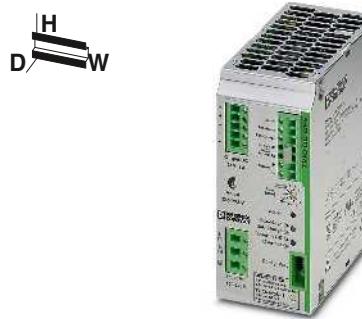

## Uninterruptible power supply units for the control cabinet

### Power storage device for MINI UPS

#### MINI-BAT

- MINI-BAT for maximum buffer times
- Lead AGM (Absorbent Glass Mat) technology
  - Ambient temperatures from 0 to +40°C

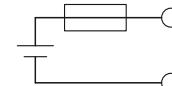

#### Notes:

The buffer time associated with your solution is dependent on the load current. Exact details for each uninterruptible power supply can be found on page 233

## Power supply units and UPS

### Uninterruptible power supply units for 19" racks/towers

#### Constant power supply and improved power quality

UPS devices play an important role in ensuring reliable power quality. They bridge power failures and remove other mains faults such as:

- Under voltages or surge voltages
- High-frequency noise
- Frequency fluctuations
- Harmonics

#### Class VFI-SS-111 UPS devices according to IEC 62040-3

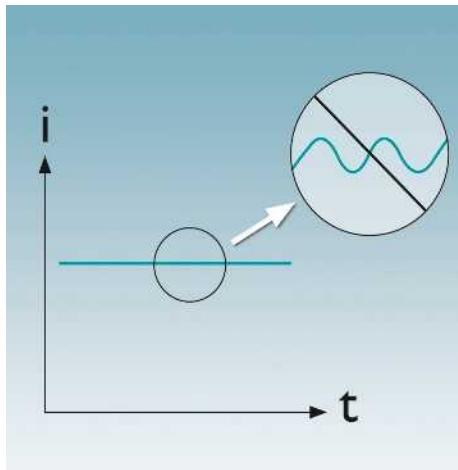

The UPS devices are class VFI-SS-111 single-phase, uninterrupted power supply units. The connected loads are protected against any faults on the mains side. Double conversion technology permanently supplies loads with an output voltage/frequency that is independent of the mains input.

#### Extensive configuration options:

Configure your UPS system according to your requirements and the operating environment.

UPS-CP devices can be configured directly via the control panel, even with no external power supply, provided the batteries are charged:

- Quick status check via LED and illuminated LCD control panel
  - Controlled computer shutdown by means of additional software
  - Remote access via web browser with SNMP network card
- Complete and extend your UPS system:
- DIN rails offer the option of installing the UPS-CP devices in 19" racks
  - All devices can be extended with SNMP network cards or relay cards

**Long battery life**

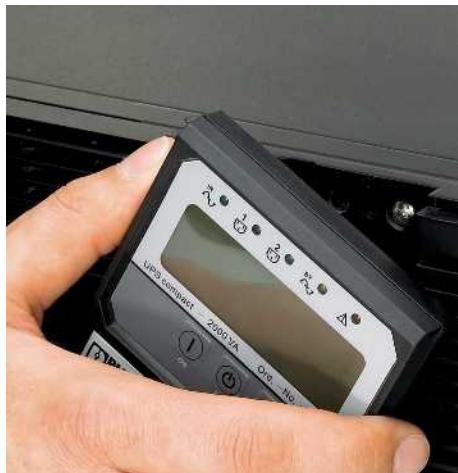

The special charge control of the UPS-CP devices ensures ripple-free DC voltage without higher-level AC currents.

**Integrated safety cut-off**

If required the UPS-CP devices can be integrated in a safety concept via a two-pos. connection.

**Easy battery replacement**

Batteries can be easily replaced during operation and when integrated. This is true for all UPS devices and battery modules.

**Stand-alone or 19" rack installation possible**

Depending on the application, the control panel on the UPS-CP devices can be rotated 90° for optimum display clarity.

# Power supply units and UPS

## Uninterruptible power supply units for 19" racks/towers

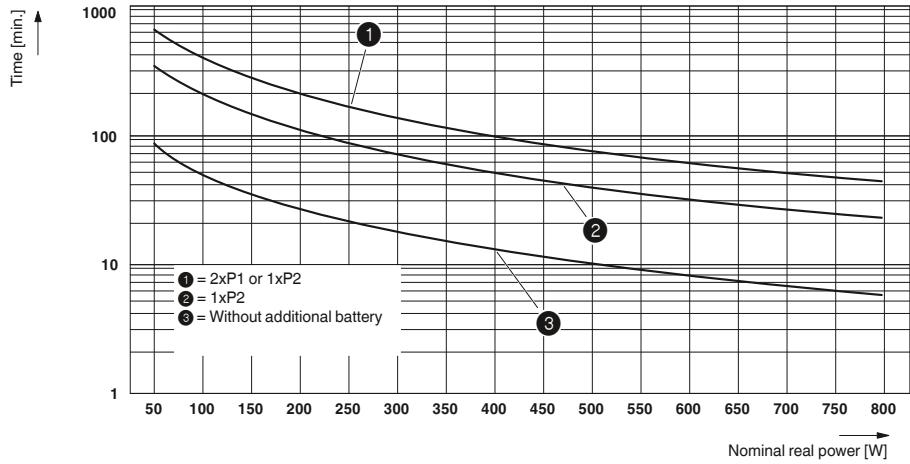

In order to select the ideal UPS, the power requirement of the connected loads and the required bridging time must be known. The diagrams illustrated can be used to select the appropriate UPS.

By adding external battery units, correspondingly longer bridging times can be achieved.

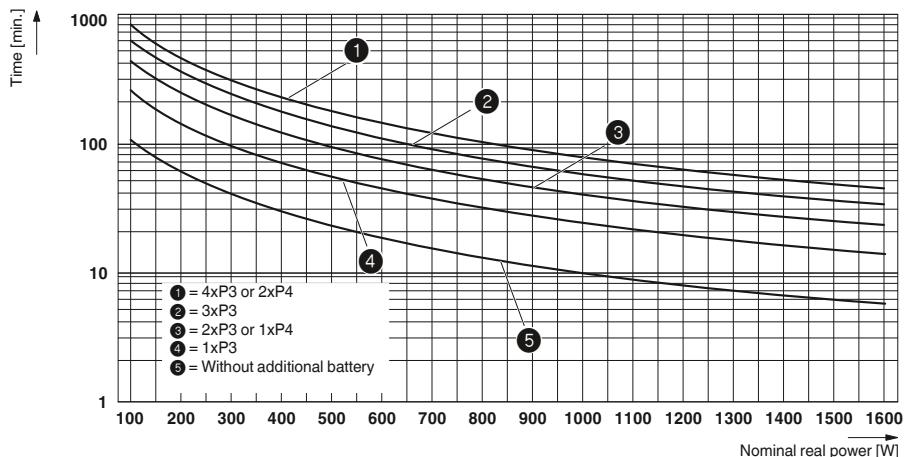

For the assignment and maximum possible number of external battery units, please refer to the table on the right.

## Uninterruptible power supply units for 19" racks/towers

### UPS devices

- Class VFI-SS-111 single-phase UPS (according to IEC 62040-3)
- Double conversion technology for maximum voltage quality
- Use as rack (19") or tower device with rotatable control panel
- Hot-swappable battery replacement on the front
- Long battery life thanks to ripple-free charging
- Mains-independent output voltage
- Comprehensive accessories for enhanced functions
- Supports a variety of operating systems

# Power supply units and UPS

## Uninterruptible power supply units for 19" racks/towers

### UPS accessories

- SNMP network cards for UPS remote control and monitoring
- Relay cards with extended signal outputs for control functions
- External bypass modules for bypassing the UPS during servicing
- Multiple socket strips for connecting additional loads
- Redundancy modules for parallel connection of UPS devices to increase the reliability of the supply

**SNMP interface adapter card**

**6-way relay card**

# Protective devices

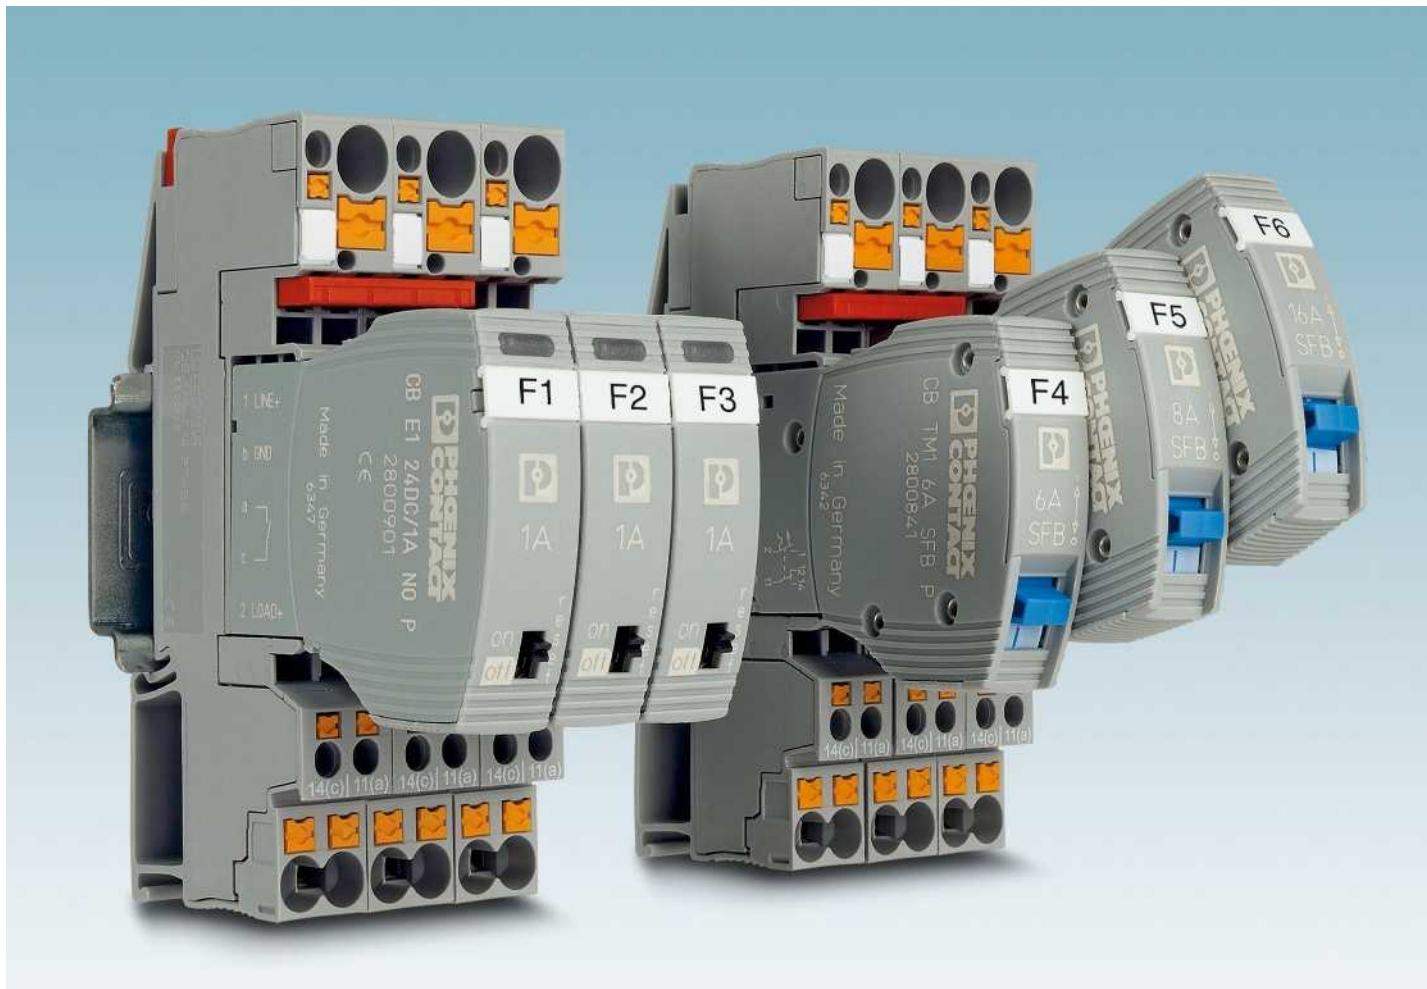

## High-grade device circuit breakers offer safety for your systems

Device circuit breakers are a key factor in high system availability. In the event of over-load and short-circuit currents, they selectively shut down the faulty circuit.

## Introduction to protective devices

### Branch out

The device circuit breakers provide reliable protection even if your systems involve long cable paths. Together with the SFB technology\* of the QUINT POWER power supply units, the special SFB trigger characteristic of the CB device circuit breakers ensures fast shutdown in the event of an error. This combination offers maximum protection against overload and short-circuit currents.

\*SFB = Selective fuse breaking, selective shutdown

### Individual adaptation

You can pre-wire your systems with base elements and individually equip them with protective plugs on site. The device circuit breakers can also be quickly adapted to accommodate necessary changes in your system. Should you change a load, simply replace the relevant protective plug. Various tripping methods, characteristic curves, and nominal currents are available depending on the application.

### Modular extension

It couldn't be easier. Enhance your system with additional device circuit breakers in no time at all. You can bridge the power distribution, remote signaling or even the auxiliary voltage for electronic circuit breakers without this resulting in significant wiring costs. The uniform, plug-in housing concept as well as the bridgeability of the base elements simplify installation.

### Device circuit breaker board

The multi-channel circuit breaker boards are used in standard production machines or in control and process technology, for example.

Central potential distribution minimizes the time and effort that has to be spent on installation. The boards are very versatile in application, as each one is populated with thermomagnetic circuit breakers individually.

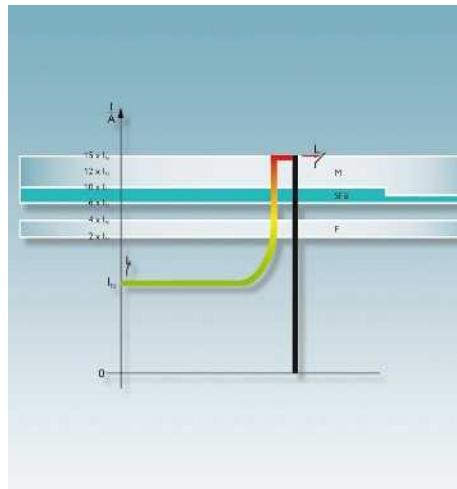

### Latching

You can quickly and easily remove the plugs from the base element. The new latching ensures a secure fit in harsh environments and where there are vibrations in the installation environment. It holds the plug in place in the base element.

### Coding

Straightforward coding means that components can be mounted on the base element according to individual requirements without any errors.

### SFB trigger characteristic

Thermomagnetic device circuit breakers with the SFB trigger characteristic\* provide maximum overcurrent protection – even in large systems with long cable paths.

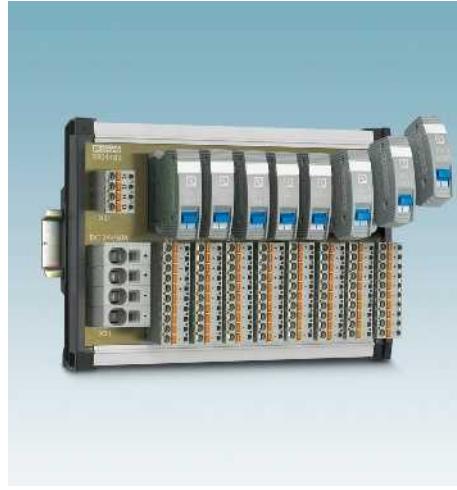

### Bridge

With the unique bridge system from our standard range, the device circuit breakers can be combined easily as per your requirements. Potentials of the same type can be connected quickly and safely.

### Variable connection technologies

You can choose base elements with either push-in or screw connection technology.

### Device circuit breaker board

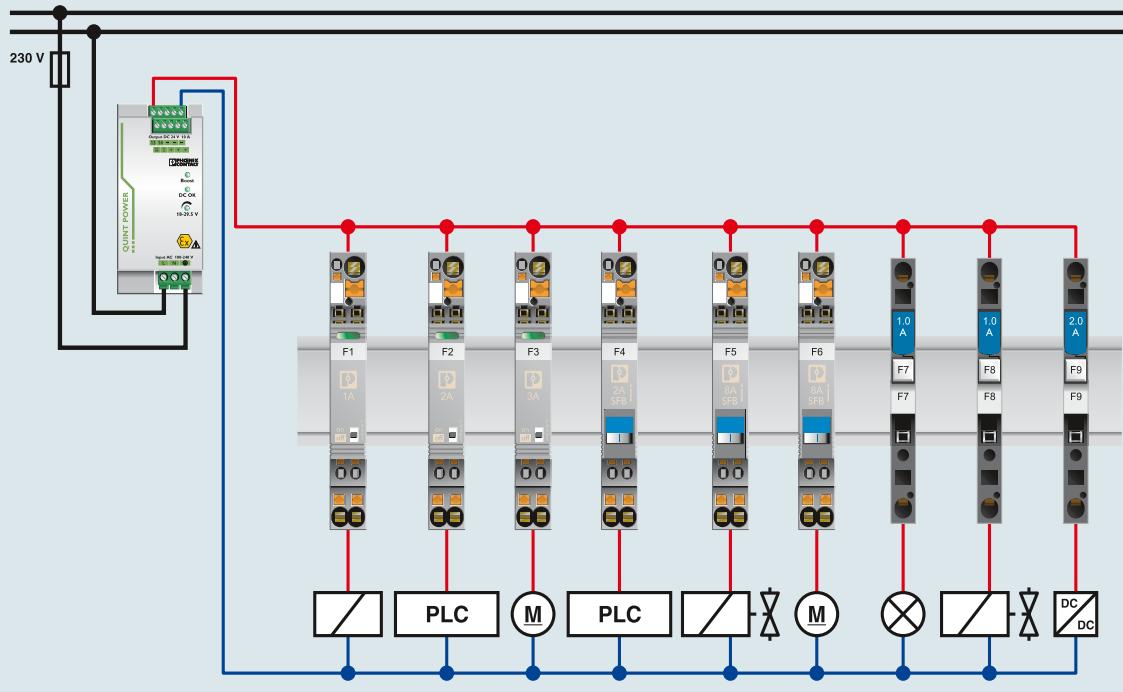

The multi-channel device circuit breaker boards are available with 4, 8 or 12 channels.

## Device circuit breakers

### Plug-in electronic circuit breakers

- Device circuit breakers for protecting against voltage dips caused by overloads and short circuits
- Integrated active current limitation
- Remote control possible
- Maximum ease of maintenance thanks to the two-piece design
- Snap-in function for secure hold and easy removal
- Plug coding possible
- Narrow design

The figure shows the complete module consisting of a base element and connector

1 N/O contact

Total width 12.3 mm

## Device circuit breakers

### Base element and plug-in bridges

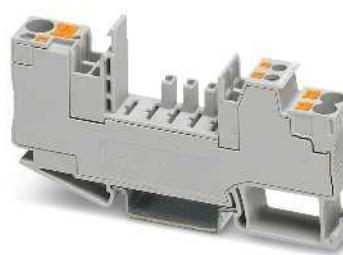

N

#### Base elements

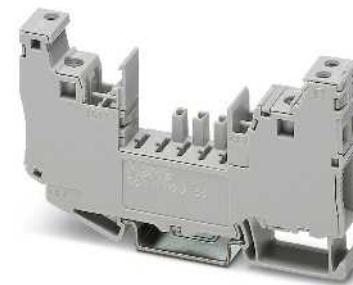

- For accommodating CB TM.../CB E.... device circuit breakers
- Rail-mountable module
- With bridge shafts
- Systematic structure with 1-channel base elements possible

#### Notes:

Can be loaded with up to 41 A if two bridges are connected for the supply.

1-pos. with push-in connection,  
input 1 x 6 mm<sup>2</sup>/output 2 x 4 mm<sup>2</sup>

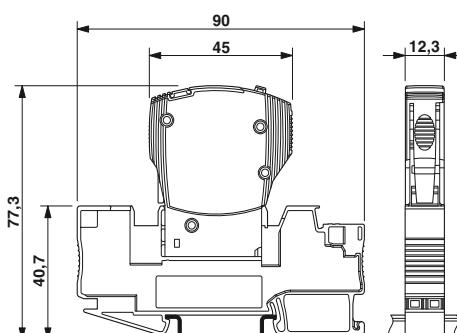

1-pos. with screw connection,  
input 1 x 10 mm<sup>2</sup>/output 1 x 10 mm<sup>2</sup>

General data	
Rated surge voltage	4 kV
Dimensions W / H / D	12.3 mm / 90 mm / 46.7 mm
Connection method	Push-in connection
Temperature range	-30 °C ... 60 °C
Degree of protection	IP30 (Actuation area)
Inflammability class according to UL 94	V0

# Protective devices

## Device circuit breakers

### Device circuit breaker board

N

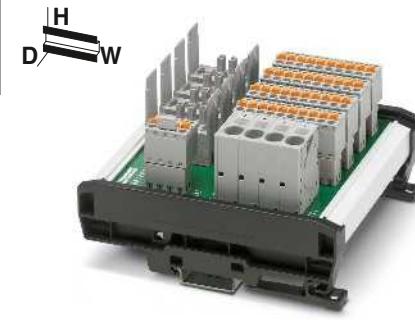

#### Notes:

The board is supplied **without** a plug.

Only type CBB TM1... plugs can be used.

For dimensional drawings, see [www.phoenixcontact.net/products](http://www.phoenixcontact.net/products)

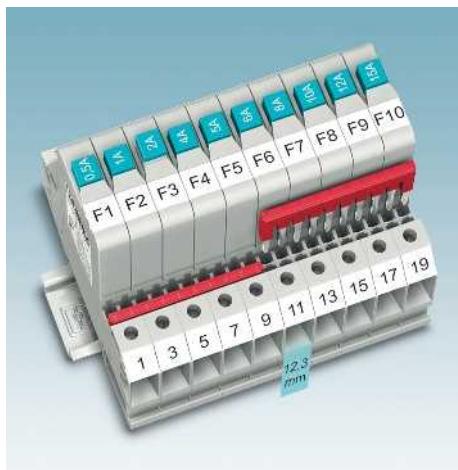

DIN-rail mountable

- Reduced installation time thanks to multi-channel device circuit breaker board (4/8/12 channels)
- Space savings of up to 35% thanks to compact design
- Fuse protection of up to 12 A per channel provides best possible protection for connected loads
- Up to 5 loads can be protected simultaneously with the additional terminal points
- Integrated group remote signaling ensures that you are always kept informed
- High current carrying capacity of the board supports supply of up to 60 A
- Maximum overcurrent protection across long cable paths thanks to device circuit breakers with SFB trigger characteristic

## Thermomagnetic circuit breaker UT 6-TMC ...

- Thermomagnetic circuit breakers feature a compact design, large-surface labeling options, and a double plug-in bridge shaft
- They can be integrated into the CLIPLINE complete system via the plug-in bridge shaft
- 12.3 mm compact design
- High level of system availability thanks to their reclosure function and clear status display
- Eleven nominal current levels can be selected from 0.5 A to 16 A
- Clear assignment of the relevant circuit breaker thanks to the large center labeling area

A complete data sheet is available to download for each product at [www.phoenixcontact.net/products](http://www.phoenixcontact.net/products).

DIN-rail mountable

Total width 12.3 mm

## Device circuit breakers

### TCP thermal circuit breaker

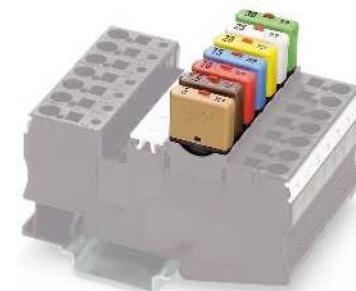

- Plug-in thermal miniature circuit breakers combine the protective mechanism of an auto flat-type fuse with the advantages of a circuit breaker
- In the event of an error, the time-sensitive search for a suitable replacement fuse is eliminated thanks to the reclosure function
- The area of application extends to the protection of integrated circuits in all battery and onboard systems with up to 32 V DC
- Fits in all fuse holders designed for flat-type fuse inserts according to ISO 8820-3 (DIN 72581-3)
- A version with screw or spring-cage connection is used as a basic terminal block

**You can find more fuse terminal blocks in Catalog 3, Modular terminal blocks.**

#### Notes:

Attention: The reset button must not be obstructed. During installation, please leave enough room for using button.  
For additional technical data, drawings, and accessories, please visit [www.phoenixcontact.net/products](http://www.phoenixcontact.net/products).  
You can find a wide selection of fuse terminal blocks in Catalog 3, Modular terminal blocks  
1) If the fuse is faulty, the downstream circuit is not off load.

**TCP thermal circuit breaker****Notes:**

**Note:**  
When mounted in rows, the nominal current of the devices can be transmitted only at 80% or must be correspondingly overdimensioned.

For additional technical data, drawings, and accessories, please visit [www.phoenixcontact.net/products](http://www.phoenixcontact.net/products).

Can be plugged into a fuse terminal block

- The reclosable thermal circuit breaker is available in nine nominal current levels ranging from 0.25 to 10 A
  - The integrated switching function enables immediate reclosure and thus ensures the availability of the system
  - Compact design
  - A version with screw or spring-cage connection is used as a basic terminal block
  - Potential distribution possible by means of bridges
- A complete data sheet is available to download for each product at [www.phoenixcontact.net/products](http://www.phoenixcontact.net/products).

## Multiplication factor for higher ambient temperatures for TCP..., UT 6-TMC..., TMC..., and TMCP...

## Note:

When mounted in rows with simultaneous load, a mutual thermal effect occurs. This is equivalent to a rise in the ambient temperature. It depends on the nominal current, the ambient temperature, the number of devices, and the distance between devices. The nominal device current can be either overdimensioned (see multiplication factor for temperature behavior) or limited to just > 80%. Please request the maximum permissible current if planning to mount in rows.

Ambient temperature, °C	Multiplication factor
-30	0.76
-20	0.79
-10	0.83
0	0.93
+10	0.93
+23	1.00
+30	1.04
+40	1.11
+50	1.19
+60	1.29

## Device circuit breakers

### ECP-E plug-in electronic circuit breaker

The area of application for the electronic circuit-breaker ECP-E extends to all aspects connected with the power supply unit. In the event of an overload, power supply units reduce their output voltage and all the connected loads are no longer supplied with sufficient power, e.g., in the case of short-circuit at the load.

The solution here is the electronic circuit breaker:

- Selective protection of all 24 V DC load circuits at switched-mode power supply units
- Residual current always limited to 1.8 times the nominal current
- Capacitive loads can be switched on and loads are only switched off in the event of an overload or short circuit

After detecting overload or short-circuit in the load circuit, the load output of the ECP-E is locked. The current flow is interrupted in the faulty current circuit. The ECP-E and subsequently the current circuit can be activated again through the electronic reset input (13;14) or manually at the device through the slide-type switch.

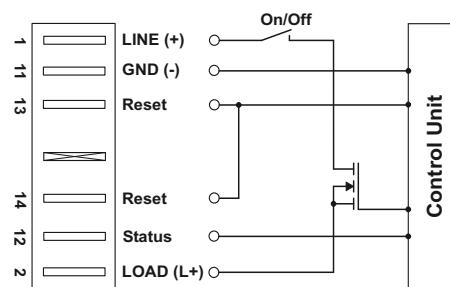

The ECP-E has the following features:

- The operating or error state is indicated by a multi-color LED as well as an integrated status output (12)
- Design width of just 12.5 mm
- Can be plugged onto TMCP SOCKET M base

A complete data sheet is available to download for each product at  
[www.phoenixcontact.net/products](http://www.phoenixcontact.net/products).

## ECP selective circuit breaker

The area of application for the ECP ... extends to all aspects of the power supply unit. In the case of an overload, power supply units reduce the output voltage. As a consequence, all connected loads would no longer be sufficiently supplied. This means that if an error occurs in one load of a system, the voltage will be affected in all load circuits.

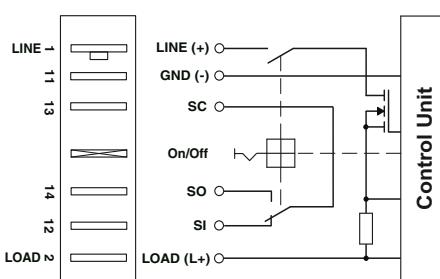

The solution here is the electronic circuit breaker:

- Selective protection of all 24 V DC load circuits at switched-mode power supply units
- Residual current always limited to 1.8 times the nominal current
- Combination of active electronic current limitation and proven circuit breaker technology including electrical isolation
- Capacitive loads can be switched on and loads are only switched off in the event of an overload or short circuit

Other properties:

- Operating or error state indicated by LED and integrated signal contacts
- Design width of just 12.5 mm
- Can be plugged onto TMCP SOCKET M base

A complete data sheet is available to download for each product at [www.phoenixcontact.net/products](http://www.phoenixcontact.net/products).

Can be plugged onto base

Total width 12.5 mm

## Device circuit breakers

### Base for ECP and TMCP

- The TMCP SOCKET M base element is used to mount TMCP ... and ECP ... plug-in circuit breakers on DIN rails
- Flexible structure with any number of positions
- Individual protection thanks to free combination of both circuit breaker types on a single module
- The TMCP CONNECT LR termination elements are plugged in at the start and end of the module structure
- Supply indicated via connections 11 and 12
- Separate signal request for each circuit breaker
- Using connections 13 and 14 in the termination elements, a signal loop can be created via all circuit breakers quickly and without the need for additional wiring.
- All electrical connections of the main and signal contacts are located in the base
- Potential distribution possible by means of bridges
- User-friendly spring-cage connection
- Large-surface labeling options make it easier to assign the circuit breakers to the modules

## General installation notes/surge voltage limiting components

### Installation instructions for surge protective devices

#### Installation direction:

Surge protective devices with a multi-stage configuration which are looped into the circuit are marked "IN" and "OUT". They must be connected before the device to be protected so that "IN" points towards the direction from which the surge voltage is expected.

The device to be protected should be connected to the terminal points marked "OUT". This is the only way to ensure correct operation of the surge protective device in the event of a surge voltage coupling.

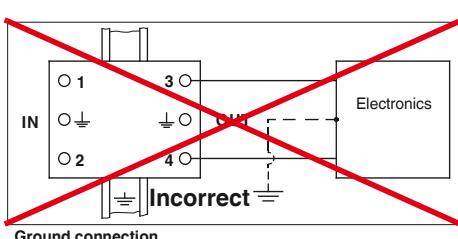

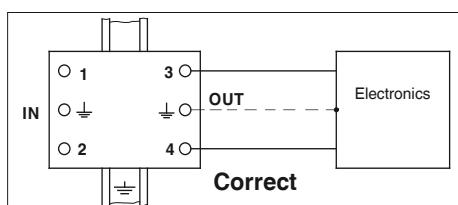

#### Connection:

The protective conductor connection of the system to be protected should be connected directly and via the shortest route to the ground connection of the surge protective device or the corresponding connection terminal block on the "OUT" side of the surge protective device.

This is the only way to ensure that impermissibly high voltages due to potential increases caused by discharge currents are prevented between the ground connections of the surge protective device and the device to be protected. The same is true for the connection between ground and the live conductors of the device to be protected (see figure: ground connection).

#### Equipotential bonding:

Correct operation of the surge protective devices requires complete equipotential bonding in accordance with the applicable regulations.

#### Cable routing:

Protected and unprotected cables must not be laid directly parallel to one another. They must be physically separated or shielded from one another so that surge voltages cannot be coupled from unprotected cables to protected ones. If crossed, cables that can influence one another must be crossed at right angles.

#### Quenching follow currents:

Gas-filled surge arresters only have limited self-quenching capability and are therefore almost always suitable for protecting message transmission systems.

The arresters easily meet the requirements of the usually high-impedance remote indication circuits. Distinct quenching behavior is observed under the following conditions in the case of systems with higher operating voltage or lower impedance:

**AC application:** if the possible short-circuit current of the source exceeds the alternating current carrying capacity, a fuse is required to prevent overheating caused by the follow current.

**DC application:** for voltages > 12 V DC, the possible short-circuit current of the source must not exceed 100 mA. Otherwise a fuse that enables shutdown within 5 seconds should be selected. Self-quenching capability is ensured for voltages ≤ 12 V. Please note, however, that the specific technical data for the product must always be observed.

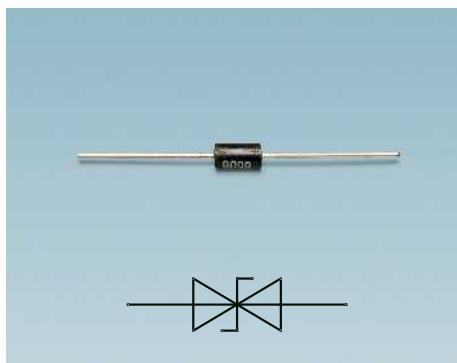

**Backup fuse:** the system must be protected against impermissibly high short-circuit currents due to arrester overload. The maximum permissible or required backup fuse for the affected arrester is documented in the technical data of the relevant product.

### Surge voltage limiting components

The main function-specific components for lightning arresters and surge protective devices are spark gaps, gas-filled surge arresters, varistors, and diodes, as well as decoupling impedances.

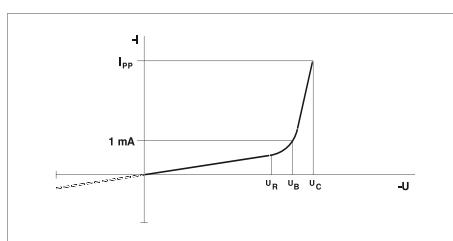

All components have specific advantages and disadvantages. In order to achieve optimum protection, protective circuits and multi-stage protection concepts that combine various components can be implemented.

#### Suppressor diode

The reverse voltage  $U_R$  is the highest voltage that the diode can safely block. A current of 1 mA flows through the suppressor diode at the breakdown voltage  $U_B$ . At this point the suppressor diode starts limiting the surge voltage.

The maximum clamping voltage  $U_C$  is the highest voltage which can be present at the suppressor diode in the event of a peak pulse current  $I_{pp}$  (10/1000)  $\mu$ s.

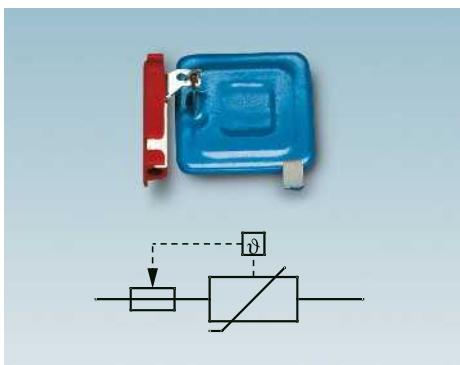

U/I characteristic curve of a suppressor diode

Explanation:

$U_R$	= Reverse voltage
$U_B$	= Breakdown voltage
$U_C$	= Clamping voltage
$I_{pp}$	= Peak pulse current
$I_R$	= Reverse current

## General installation notes/surge voltage limiting components

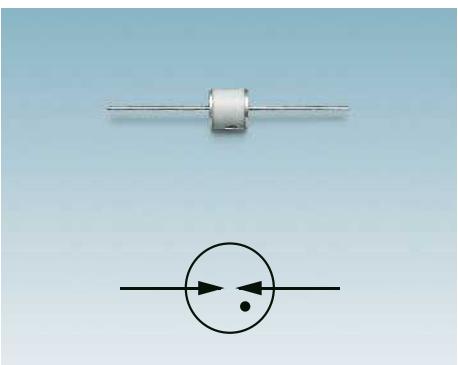

## Varistors

Block varistor with thermal disconnect device

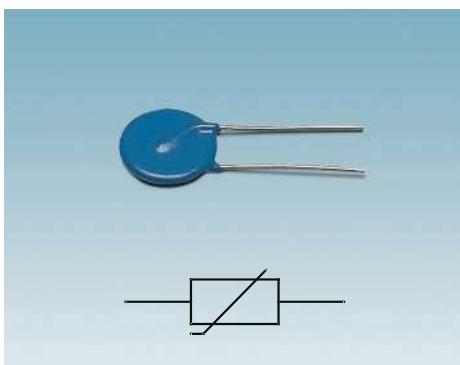

Varistors are “voltage-dependent resistors” which, due to their voltage/current characteristic curves enable a high discharge capacity with a low residual voltage.

## Gas-filled surge arresters

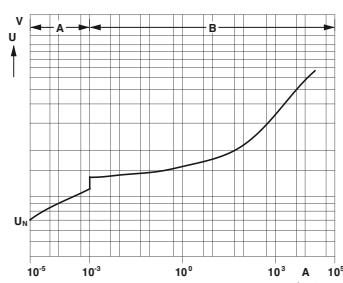

Gas-filled surge arresters consist of an electrode arrangement in a ceramic or glass tube. Between the electrodes is an inert gas, such as argon or neon. When the igniting voltage is reached, the component changes to a low-resistance state as a result of the gas discharge used. The igniting voltage is not a constant, instead it is dependent on the rate of rise of the surge voltage.

After igniting the discharge path, an arc voltage between 10 and 30 V typically occurs, which can be measured as a voltage drop at the arrester. In this low-resistance state, a line follow current, whose value depends on the impedance of the mains connected upstream, can flow through the arrester. In order to interrupt line follow currents that exceed the self-quenching capability, a fuse must be connected upstream of the surge arrester. Series connection of varistors or resistors is also possible.

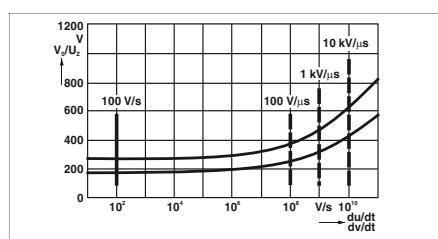

Disc varistor

U/I characteristic curve of metal oxide varistors

Explanation:

- A = High-resistance operating area
- B = Low-resistance operating area/limiting area

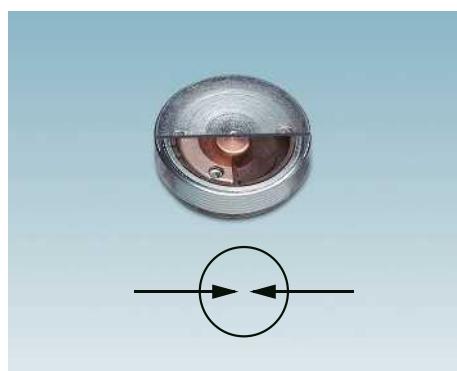

Characteristic ignition curve of a gas-filled surge arrester

■ Static response behavior

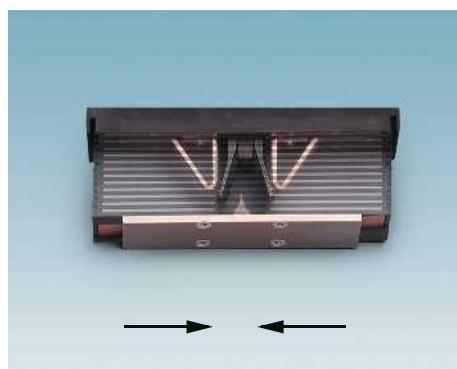

■ ■ Dynamic response behavior

The ArC spark gap in the FLASHTRAB lightning arrester is based on arc chopping technology. Two spark horns positioned opposite one another are kept at a distance by an isolator bridge bar. In addition, a baffle plate is fitted below the electrodes in the direction of the opening. In the event of a surge voltage, surface discharge occurs along the isolator bridge bar, which creates an arc. This is driven along the spark horns towards the baffle plate where it is chopped up. The resulting physical effects quench the arc and the associated line follow currents.

A significant increase in the follow current quenching capacity can be achieved with spark gap types in which quenching plates are arranged around the spark horns.

## Explanation of terms

### Surge protective devices

The wide range of different applications also requires numerous different surge protective devices with application-specific properties. Important criteria include the type of circuit, the surge-voltage limiting properties, and the design. The TRABTECH range from Phoenix Contact offers numerous versions, such as adapters, junction boxes or DIN-rail-mountable arresters in a modular and compact design, providing practical system solutions for all applications.

In line with their intended application, surge protective devices are designed for high electrical loads. However, excessive or very frequent surge voltages may lead to overload. This can result in a reduction or even failure of the protective function, and the affected protective device having to be replaced. Where possible, surge protective devices should therefore have a plug-in design and support testing.

The TRABTECH product range from Phoenix Contact takes these requirements into consideration as far as modern technology permits. The product range includes surge protective devices in the form of adapters, as well as devices with a two-piece plug-in modular design.

The protective devices in the FLASHTRAB, VALVETRAB, PLUGTRAB, and COMTRAB product ranges are particularly interesting with regard to their plug-in capability and testability. They have been developed with various protective circuits and different nominal voltages for applications in power supply, measurement and control, and data interface protection.

With components that are perfectly designed to work together, i.e., gas-filled surge arresters, varistors, and suppressor diodes depending on the protective circuit, their specific advantages are fully utilized.

### Explanation of terms

#### AC withstand voltage

The r.m.s. value of the highest sinusoidal voltage at mains frequency which will not lead to a disruptive discharge under the specified test conditions.

#### Aging

Modification of the original performance data due to disturbing pulses, operation or unfavorable ambient conditions.

#### Ambient conditions

The immediate ambient conditions for the device or the relevant air and creepage distances.

#### Arc voltage $U_{bo}$

The arc voltage is the instantaneous value of the voltage on a discharge path (arc discharge) during an arresting process.

#### Arrester

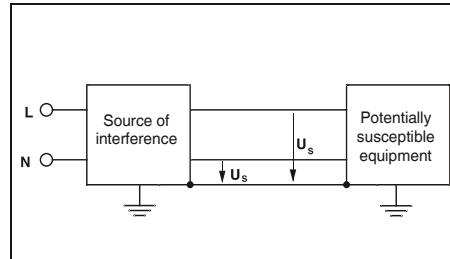

Item of equipment that mainly consists of voltage-dependent resistors and/or spark gaps. Both elements can be connected in series or in parallel, or even used individually. Arresters are used to protect other electrical equipment and electrical systems against impermissibly high surge voltages.

#### Associated electrical equipment

An item of electrical equipment in which not all circuits are intrinsically safe, but which contains circuits that can influence the safety of the intrinsically safe circuits to which they are connected.

#### Asymmetrical interference

Asymmetrical means that the source of interference and the potentially susceptible equipment are grounded, i.e., they have a capacitive or galvanic connection to the protective conductor. As shown in the figure, the interference moves from the source along both conductors to the potentially susceptible equipment and back via ground. The terms "common-mode interference" or "common mode" are also used.

#### Asymmetrical voltage, common mode voltage

Average voltage between each conductor and a specified reference point, usually reference ground or ground.

#### Burst

Pulses which occur repeatedly within a specific time interval.

#### Common mode voltage

The common mode voltage is the voltage which occurs in the event of interference between live conductors and ground.

#### Coupling

Interaction between circuits, in which energy is transferred capacitively, inductively or galvanically from one circuit to the other.

#### Direct or close-up strikes

These cause surge voltages with an energy level that constitutes a considerable part of the total energy of the lightning discharge.

#### Discharge of static electricity; electrostatic discharge; ESD

The transmission of an electrical charge between bodies with different electrostatic potentials when they are in close proximity or touching.

#### Disconnect device

This is a device which disconnects a SPD from the mains when it fails. It is designed to prevent a permanent fault in the system caused by the faulty surge arrester and provide an optical indication of the faulty SPD.

#### Disturbance variable

The disturbance variable is an electromagnetic (or electrical or magnetic) variable, which can have an undesirable influence on electrical equipment.

#### Electromagnetic compatibility (EMC)

The ability of a device or system to operate without faults in an electromagnetic environment without itself causing electromagnetic interference, which would be unacceptable for other devices in this environment.

#### Electromagnetic environment

The sum of all electromagnetic phenomena at a given location.

**Electromagnetic interference**

A loss in the quality of the operating behavior, such as malfunction or failure of electrical or electronic equipment, that is caused by an electromagnetic disturbance variable.

**Equipment to be protected**

All equipment of a structural system or a range which requires surge protection or lightning protection.

**Equipotential bonding**

The removal of potential differences between conductive parts, in which all points assume virtually the same potential.

A distinction is made between functional equipotential bonding and protective equipotential bonding.

**Equipotential bonding conductors**

These are electrically conductive connections used to create equipotential bonding.

**Equipotential bonding strip**

This is the strip which is designed to connect protective conductors, equipotential bonding conductors, and conductors for functional earth grounding to the ground conductor and the ground electrodes.

**Equipotential bonding system**

This refers to all the interconnected equipotential bonding conductors, including the conductive parts such as housing or external conductive parts which work in the same way.

The equipotential bonding system can also be the grounding system or part of a grounding system.

**Exposure**

Exposure is an insufficient distance between the lightning protection system and metal installations or electrical systems which leads to a risk of flashover or disruptive discharge in the event of a lightning strike.

**Exposure voltage**

The exposure voltage is a voltage that occurs at the exposure point when lightning strikes the lightning protection system.

**Follow current  $I_f$** 

Current which flows through the SPD following discharge and is supplied by the mains. The follow current differs considerably from the continuous operating current.

**Gas-filled surge arrester**

The gas-filled surge arrester is a discharge path which is filled with a gas other than air, generally an inert gas.

**Ground**

This expression refers to the earth and the ground.

**Ground conductor**

A conductor which connects the equipment to be grounded to a ground electrode, as long as the ground conductor is not laid in the ground or, if laid in the ground, is insulated.

**Ground electrode**

A conductor embedded in the ground with an electrically conductive connection to ground. Parts of supply lines to a ground electrode, which are not insulated in the ground, are considered to be parts of the ground electrode.

**Grounding**

Grounding is the sum of all means and measures used for grounding.

**Grounding resistance**

The resistance between the grounding system and the reference ground. The amount of grounding resistance depends on the interaction of the individual ground electrodes.

**Impulse sparkover voltage of 1.2/50  $\mu$ s**

Highest voltage value before the disruptive discharge between the electrodes of the spark gap of a SPD.

**Impulse withstand voltage  $U_{\text{imp}}$** 

The peak value of the highest surge voltage with a predefined form and polarity, which will not lead to a disruptive discharge under the specified test conditions.

Note: the impulse withstand voltage is equal to or greater than the rated surge voltage.

**Inactive parts**

Inactive parts are conductive parts that are electrically isolated from all live parts through basic insulation.

**Insertion attenuation**

To determine the insertion attenuation of a SPD, the mains and frequency are specified. The attenuation value is defined as the ratio of voltages that occur immediately before and after the insertion point of the SPD to be tested. The result is expressed in decibels.

**Insulation coordination**

The assignment of characteristic insulation data for an item of equipment for:

- Expected surge voltages
- Characteristic data of the surge protective device
- Expected ambient conditions
- Protective measures against contamination

**Interference suppression**

Measure to reduce or avoid the electromagnetic disturbance variables that occur.

**Intrinsically safe circuit**

A circuit protected against sparks and thermal effects that may occur under the conditions specified in DIN EN 60079-11 (which include error-free operation and specific fault conditions), which can cause the ignition of a particular explosive gas atmosphere.

**Intrinsically safe electrical equipment**

Electrical equipment in which all circuits are intrinsically safe.

**Lightning protection system**

All devices as a whole that provide external and internal lightning protection for the system to be protected.

**Lightning surge current  $I_{\text{imp}}$** 

Lightning surge currents are characterized by the parameters peak value, charge, specific energy, and current increase rate. The lightning surge current  $I_{\text{imp}}$  is a measurement for the discharge capacity of lightning arresters (class I). It is determined according to a defined test procedure using 10/350  $\mu$ s waveform test pulses.

**Lightning surge voltage**

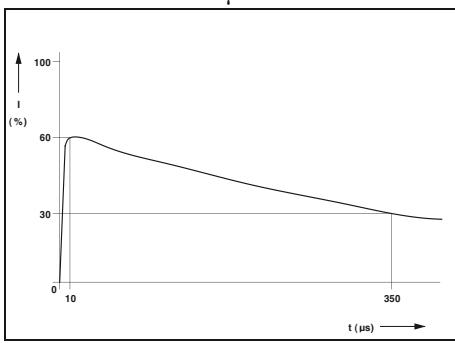

Surge voltage as a result of lightning discharge.

# Technical information

## Explanation of terms

### Lightning test current

The (10/350)  $\mu$ s lightning test current has a rise time of 10  $\mu$ s and a decay time to half-value of 350  $\mu$ s.

10/350 lightning current pulse according to IEC 62305-1

### Live parts

Live parts are conductors and conductive parts of equipment that are energized under normal operating conditions.

### Maximum continuous voltage $U_c$

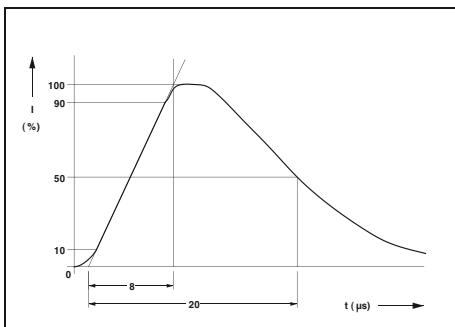

The rated voltage is the maximum permissible r.m.s. value of the power-frequency AC voltage, which may be permanently applied to the protective paths of the arrester.

### Nominal current $I_N$ or load current $I_L$

Highest continuous current for products according to IEC 61643 which can flow through the surge protective device at the specified temperature without altering the electrical operating properties. For higher operating temperatures, the nominal current is lower (derating).

### Nominal discharge surge current $I_n$

Peak value of the current flowing through the SPD with surge form (8/20)  $\mu$ s. It is used to classify the SPD according to class II. Source: EN 61643-11

8/20 surge current pulse according to IEC 60060-1

### Nominal voltage $U_N$

A suitable rounded voltage value, which is specified by the manufacturer for equipment for the purpose of designation or identification.

### Normal mode voltage

The normal mode voltage is the voltage which occurs in the event of interference between two conductors of a circuit.

### Potentially susceptible equipment

All electrical equipment whose function can be influenced by disturbance variables is referred to as potentially susceptible equipment. Influence on function may be in the form of a functional disturbance, reduction in function, malfunction or failure.

### Protection level $U_p$

A parameter that characterizes the performance capabilities of the SPD with regard to voltage limitation via its connection terminal blocks. This value, which should be specified by the manufacturer, must be greater than the highest measured value of the clamping voltages.

### Protective paths

The voltage-limiting or switching components of the SPD can be connected between conductor/conductor, conductor/ground, conductor/neutral conductor, and neutral conductor/ground or a combination of these options. These circuit types are referred to as protective paths.

### Pulse

Rapid, brief alteration of a physical variable, followed by a fast return to the original value.

### Pulse burst; burst

Result of a limited number of pulses or waves of a limited duration.

### Rate of rise

Average rate of change of a variable between two specified values, e.g., 10% and 90% of the peak value.

### Reference ground

An area of the earth, particularly of the earth's surface, which is so far away from the ground conductors that no noticeable voltages occur between any points of this area as a result of the current entering the earth.

### Remote strikes

These usually cause surge voltages with a significantly lower energy level than close-up strikes. Remote strikes are responsible for causing surge voltages in electrical and electronic systems.

### Residual current device (RCD)

Residual current devices are devices which isolate electrical systems from the power supply system as soon as the residual current to ground exceeds a specific value.

### Residual voltage $U_{res}$

The peak voltage value that occurs while discharge surge current is flowing via the terminal blocks of the SPD. Source: EN 61643-11:2002

### Response

A response is when either:

- The peak value of the ohmic components of the current flowing through the arrester reaches 5 mA
- A voltage dip with an increase in the peak value of the current flowing through the arrester to 5 mA occurs

### Selective residual current device

Selective residual current devices are time-delayed circuit breakers.

### Short circuit stability

Highest interference-free short-circuit current the SPD can withstand.

### Source of interference

A source of interference is the origin of disturbance variables. In principle, any electrical equipment, such as motors or fluorescent lamps, can be a source of interference.

### Specialist

A specialist is a person who, because of their education, experience, and instruction, and their knowledge of relevant regulations, can assess any required operations and recognize any possible dangers.

Note: when considering a person's professional training, several years' experience in the relevant field can also be taken into account.

### Spike

A relatively short single-polarity pulse.

### Surface discharge surge arrester

The surface discharge surge arrester, according to DIN VDE 0845 Part 1, is a discharge path in which gas discharge is initiated by means of surface discharge.

### Surge current of (8/20) $\mu$ s

Surge current with a rise time of 8  $\mu$ s and a decay time to half-value of 20  $\mu$ s. Source: IEC 60060-1

**Surge current of (10/350)  $\mu$ s**

Surge current with a rise time of 10  $\mu$ s and a decay time to half-value of 350  $\mu$ s. Source: IEC 62305-1

**Surge protection equipment (SPE)**

Surge protection equipment consists of surge protective devices and all equipment in telecommunications systems, including their cables, used for surge protection.

**Surge protective device (SPD)**

A device to limit surge voltages and discharge surge currents. It contains at least one non-linear voltage-limiting component.

**Surge voltage**

Any voltage with a peak value that exceeds the corresponding peak value of the maximum continuous voltage under normal operating conditions.

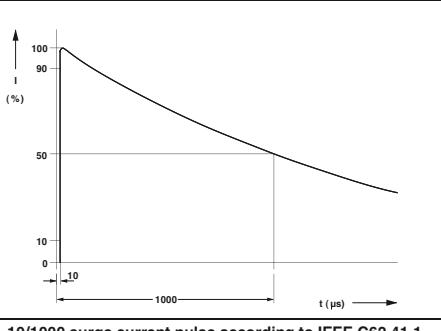

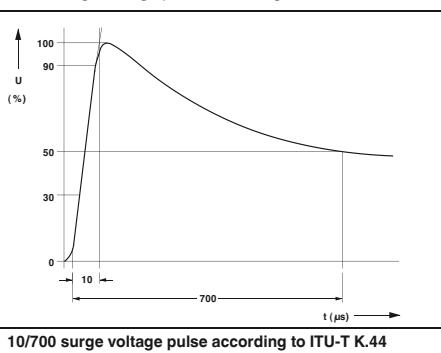

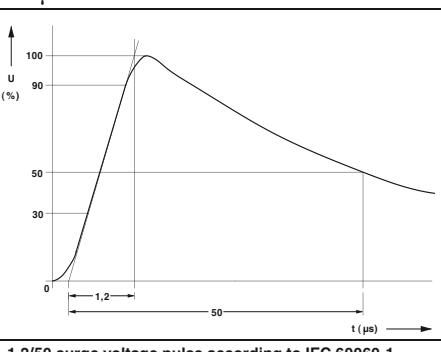

Source: EN 60664-1

**Surge voltage category**

Assignment of electrical equipment to the anticipated surge voltage.

**Surge voltage of (1.2/50)  $\mu$ s**

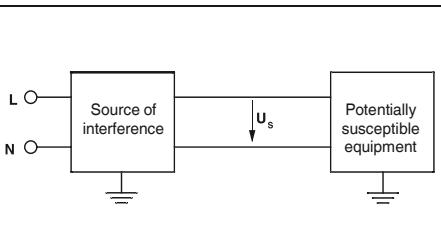

Surge voltage with a rise time of 1.2  $\mu$ s and a decay time to half-value of 50  $\mu$ s. Source: IEC 60060-1

**Switching surge voltage**

Surge voltage as a result of a switching operation.

**Symmetrical interference**

As shown in the figure, the disturbance variable moves from the source along one conductor to the potentially susceptible equipment and back along the other conductor. The terms "normal-mode interference" or "differential mode" are also used.

**Symmetrical interference voltage**

Interference voltage between two wires of a cable (e.g., double cable) or between two connection points of electrical equipment for this cable type.

**Symmetrical voltage, differential mode voltage**

Voltage between two live conductors from one defined group.

**Temperature range**

Range between the minimum and maximum temperature that may be present at/in housing. For devices without self-heating, this value is the permissible ambient temperature. For devices with self-heating, these values are the maximum temperatures that may occur at/in the device during operation.

**To ground**

An electrically conductive part, e.g., the lightning protection system is connected to ground via a grounding system.

**Transient**

Describes a phenomenon or variable which changes during what is, in comparison to the time scale being observed, a short period of time between two consecutive stationary states.

**Transients**

Irregular and relatively short positive and/or negative voltage or current changes between two stationary states.

**Varistors**

A varistor is a bipolar non-linear resistor with a symmetrical voltage/current characteristic curve and a resistance value which decreases as the voltage increases.

## Quality in quantity

### Integrated management system

The aim of the Phoenix Contact integrated management system is to coordinate all the requirements regarding products, processes, and organization.

Statutory and regulatory requirements, as well as those of international standards and our customers, are met and, in some cases, even exceeded in all phases of the product lifecycle.

In the Phoenix Contact management system, the integration of quality, environmental protection, and safety in the workplace is monitored each year for conformance by internationally recognized independent bodies. Certification in accordance with international standards ISO 9001, ISO 14001, and BS OHSAS 18001 is the result of our corporate philosophy of meeting the needs of our customers, staff, and environment as best as possible. They serve as the basis for innovative products with the familiar high Phoenix quality standard, actively practiced environmental protection, and responsibility in the field of occupational health and safety. Of course, we integrate all further requirements of standards, international approvals or special customer requirements into company processes.

This system provides a building block for the success of the Phoenix Contact Group and its products and services.

### CE marking

The CE mark was introduced as an important instrument for the free movement of goods and services within the single European market. By attaching the mark to a product, the manufacturer confirms that it complies with all applicable European Union (EU) directives. EC directives describe the product properties with regard to device safety and avoiding danger. These are legally binding regulations of the European Union (EU). In other words, compliance with the requirements is a **statutory condition for**

### marketing the product within the EU.

Where applicable, the products that our company currently manufactures fall within the scope of the following directives:

- 2006/95/EC  
Electrical equipment designed for use within certain voltage limits (Low Voltage Directive)
- 2004/108/EC  
Electromagnetic compatibility (EMC Directive)
- 2006/42/EC  
Safety of machinery (Machinery Directive)
- 94/9/EC  
Equipment and protective systems intended for use in potentially explosive areas (ATEX Directive 100a)
- 1999/5/EC  
Radio and telecommunications terminal equipment (R&TTE)

The standards upon which the specified directives are based, have been part of our standard of development for a long time. This guarantees conformance with European directives. The numbers of the directives indicate their version at the time of publication. In the event of changes to directives and/or standards, our products will undergo conformity assessment again in good time and a new declaration of conformity will be issued promptly. The current declarations for each product can also be found in our Download Center.

The EMC Directive occupies a special place among the European directives listed. It defines electromagnetic compatibility as a fundamental property of devices based on mandatory guidelines. European Law therefore acknowledges the electromagnetic compatibility of devices and systems as an important condition for error-free operation of machinery and systems. Phoenix Contact is one of the leading international companies in surge protection, and therefore possesses broad expertise in EMC. This expertise and the experience gained over years of developing and applying industrial interface and communication technology have resulted in our products having an extremely high standard of quality with regard to electromagnetic compatibility. It was with a view to providing other companies with this expertise that our associate company, Phoenix Testlab, was founded. Phoenix Testlab GmbH is an independent, accredited service provider offering EMC testing that conforms to European standards. At Phoenix Testlab, devices are also tested with regard to their electrical safety, mechanical influences, and their behavior in relation to environmental influences. Furthermore,

Phoenix Testlab is a "Notified Body" in accordance with EMC Directive 2004/108/EC and according to R&TTE Directive 1999/5/EC for radio and telecommunications terminal equipment. As a "Telecom Certification Body" (TCB), Phoenix Testlab may also approve these products for markets in the USA, Canada, and Japan.

### Standards and regulations

All relevant standards and regulations are used as the basis for the development and maintenance of our products.

International standards are subject to continuous changes as a result of harmonization and new developments. In line with this process, the current version of all standards that are relevant to our products is documented in the product area on our website at [www.phoenixcontact.net/products](http://www.phoenixcontact.net/products).

### Online product information service on the web

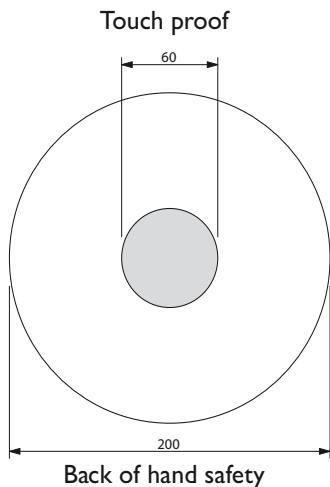

Phoenix Contact's product range is growing constantly.

Due to our commitment to product monitoring, all products are subject to improvement.

The Internet is an ideal platform to quickly communicate new product developments and improvements to the market.

You can quickly access the relevant Phoenix Contact website for your region via [www.phoenixcontact.com](http://www.phoenixcontact.com). Here, you will always find the latest overview of products, solutions, and services from Phoenix Contact. This includes technical documents, such as data sheets and user manuals, the latest driver and demo software, plus a means of contacting the appropriate contact person directly.

## Shock protection

### Example: pressure actuation

The accident prevention regulations BGV A 2 issued by the German employer's liability insurance association for precision mechanics and electrical engineering apply to the operators of electrical systems and are aimed at the prevention of electrical accidents by means of special safety requirements.

These regulations contain specifications regarding the safety distances for work, operation, and occasional handling in the proximity of "live parts" in low-voltage systems up to 1000 V ~ or 1500 V ~.

- Work with live parts is only permitted once they have been de-energized. Operational activities are only permitted in the vicinity of live parts if these parts are de-energized or are protected against direct contact (§ 6). The following safety measures are applicable when working in close proximity to live parts:
- Provision of the de-energized state for the duration of the work
- Ensure shock protection is in place in the form of covers or barriers during the work
- Assurance that proximity limits will not be violated (§ 7)

The term "occasional handling" has been introduced for the operation of elements such as pushbuttons, rocker arms or rotary buttons in the proximity of live parts.

In VDE 0105-1, this is covered by "operation with partial protection against direct contact".

Detailed specifications for "occasional handling" can be found in DIN VDE 0106-100. This specifies to what degree live parts in the proximity of operating elements are to be protected against contact. The basis for this is the definition of a "protection area for occasional handling"; this is the area into which the user must reach in order to handle the machine.

The most important thing is that an area

formed by an even envelope curve 30 mm in radius must surround the live parts. This area must be **touch proof**, i.e., the live parts of the electrical device must not be within reach of the VDE test finger in accordance with IEC 60529/DIN VDE 0470-1 (test finger).

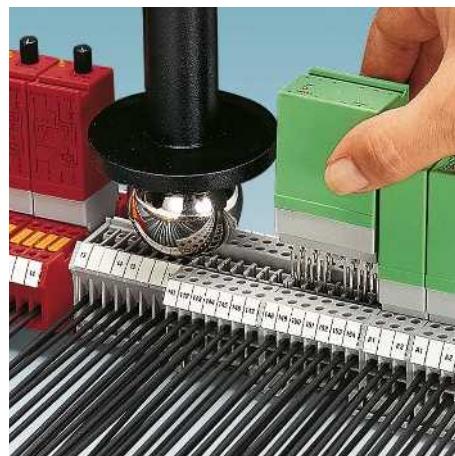

Back of hand safety is specified for the "rest of the area" up to 100 mm around the operating element. **Back of hand safety** means that when a force of 50 N is applied to a ball with a diameter of 50 mm, this does not come into contact with the live parts of the equipment. No special measures for shock

protection are provided outside this area.

Note: systems and equipment that are operated with SELV up to 25 V ~ or 60 V ~ are considered to be protected against direct contact.

According to § 5, Subsection 4 of the BGV A 2 regulations, there is no need to test the condition of the system prior to initial startup if the company has confirmation from the manufacturer or installer that the electrical systems and equipment conform to

BGV A 2. The confirmation required relates to systems and equipment that have been installed and are ready for operation and can only be issued by the installer or installation

company. The manufacturer of the electrical equipment can only issue a confirmation that products have been produced in accordance with the relevant electrotechnical DIN VDE regulations stipulated in BGV A 2. The installer must bear this in mind when selecting the equipment to be used.

In the field of connection technology, Phoenix Contact offers a wide range of products that are touch proof or that can be protected against contact using covers. Depending on the conditions, all of this must be taken into account when selecting the individual types of terminal block and accessories.

## Quality features of insulating housing

### Thermoplastics

The majority of our insulating housing is made from thermoplastic materials. Roughly speaking, these can be divided into amorphous and semi-crystalline substances.

Thermoplastics are processed using the efficient and environmentally-friendly injection molding process. They have good recycling properties and can be re-used. We use many materials that are modified in different ways to meet the demanding requirements that electrical and electronic modules, devices, and systems have to meet with regard to their mechanical, thermal, and electrical properties.

### Behavior of plastics under the influence of temperature (operating temperatures, mechanical influences)

All plastics undergo a process referred to as thermal aging when they are subjected to heat over long periods. This process causes changes in the mechanical and electrical properties of the material. External influences, e.g., radiation, additional mechanical, chemical or electrical stresses, amplify this effect. Special tests on samples can yield characteristic data which provides a good means of drawing comparisons between different plastics. However, applying these characteristics to an evaluation of molded plastic parts is only possible to a limited extent, and can only give the designer a rough guide when it comes to selecting a plastic material. This catalog uses the following assessment criteria: the **RTI value** according to UL746B/ANSI 746 B (elec. based on dielectric strength) and the **Ti value** according to IEC 60216-1 (based on a 50% reduction in tensile strength after 20,000 hours).

IEC 60947-7-1/EN 60947-7-1 specifies a permissible temperature increase of 45 K for modular terminal blocks under nominal load. Phoenix Contact terminal blocks meet this requirement.

The properties of plastics are not only affected by the influence of heat as described above; they also undergo changes as a result of cold influences. When subjected to cold as well as low levels of humidity, plastics become increasingly brittle with the result that they are no longer capable of withstanding the same mechanical loads. As the table on the right shows, the plastics concerned can be used down to a temperature of -40°C, but only without a mechanical load. As far as the products presented in the catalog are concerned, it is the ambient temperature specified in each case that is to be regarded as definitive for operation. Regardless of the plastics used, this may be subject to further restrictions (e.g., limited to -20°C) as a result

of the components used or other restrictive parameters.

At very low temperatures, this means that any form of mechanical load on the plastic components must be avoided (e.g., mounting of products on/removal of products from the DIN rail, actuation of terminal points, locking/ejection of relays from bases, prizing out of plug-in bridges, bending of cables and lines, etc.), as there is always an associated risk of damage. Unless otherwise indicated, it is recommended that you carry out the specified mounting/operational tasks in a temperature range from -10°C to +40°C.

### Inflammability characteristics of plastics (UL 94)

Inflammability tests for plastics have been defined by Underwriters Laboratories (USA) in regulation UL 94. This applies to all areas of application, but in particular to electrical engineering. A horizontal or vertical test is carried out at the test laboratory to determine the inflammability of the plastic material with a naked flame. In order of increasing resistance to combustion, the evaluation classes are HB, V2, V1, V0, and 5V. Test results are recorded on "yellow cards" and are published annually in the **Recognized Component Directory**.

### Thermoplastics: non-reinforced polyamide, PA

We use modern, semi-crystalline polyamide insulation material, which has now become an essential component in electrical engineering and electronics. It has long occupied a leading position and is authorized for use by the relevant approval authorities such as the CSA, NEMKO, KEMA, PTB, SEV, UL, VDE, etc.

Polyamide also has excellent electrical, mechanical, chemical, and other properties, even at high operating temperatures. Brief peak temperatures up to approximately 200°C are permitted as a result of heat aging stabilization. Depending on the type (PA 4.6, 6.6, 6.10, etc.), its melting point is in the region of 215°C to 295°C.

Polyamide absorbs moisture from its surroundings, on average 2.8%. However, this moisture is not in the form of crystallization water in the plastic itself, but chemically bonded H<sub>2</sub>O groups in the molecule structure. This makes the plastic flexible and resistant to breakage, even at temperatures as low as -40°C. According to UL 94, PA belongs to inflammability class V2 to V0.

### Thermoplastics: polyester, PBT

We use the semi-crystalline thermoplastic polyester in non-reinforced and fiberglass-reinforced variants for special applications which require increased dimensional and form stability.

In addition to the high operating temperature, the material is characterized by excellent mechanical strength and hardness, and does not absorb moisture from its surroundings. PBT is therefore particularly suitable for strips, for example, which are soldered onto PCBs and subsequently have to pass a burn-in test while they are subjected to heat. According to UL 94, PBT belongs to inflammability class V2 to V0.

### Thermoplastics: polycarbonate, PC

Polycarbonate combines many advantages such as rigidity, impact strength, transparency, dimensional stability, good insulation properties, and resistance to heat.

This amorphous material only absorbs moisture to a very limited degree, and is used for items such as large, rigid electronic component housing.

In its transparent form, polycarbonate is particularly suitable for use as cover profiles or marking materials.

PC has good resistance properties against mineral acids, saturated aliphatic hydrocarbons, gasoline, greases, and oils.

The material is less resistant to solvents, benzene, lyes, acetone, and ammonia. Strain cracks may result from contact with certain chemicals.

According to UL 94, PC belongs to inflammability class V2 to V0.

**Thermoplastics:****polycarbonate fiber-reinforced, PC-F**

Compared to non-reinforced materials, fiber-reinforced polycarbonates feature greater rigidity, impact strength, and operating temperature. In other respects, their properties are largely identical to those of non-reinforced polycarbonate.

**Thermoplastics: ABS**

We use the thermoplastic molding compound ABS for products which must have good impact and notched impact properties in addition to high mechanical stability and rigidity. The products are resistant to chemicals and stress cracking due to their special surface quality and hardness.

The characteristic thermal properties provide good dimensional stability at both low and high temperatures. Products made from ABS can be coated with metallic surfaces, e.g., nickel.

According to UL 94, the molding compound used belongs to inflammability class HB to V0.

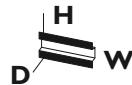

**Dimensions: width / height / depth**

The dimensions for "width / height / depth" are defined as follows for all DIN-rail mountable products in the INTERFACE range:

- Width: measurement taken along the DIN rail
- Height: measurement taken across the DIN rail
- Depth: measurement taken starting from the mounting plate and including the NS 35/7.5 DIN rail (EN 60715)

The width, height, and depth never change, even if the products shown in this catalog happen to be photographed from two different perspectives (horizontal or vertical).

To make things easier for you, one of the following two symbols has been included next to each product photo:

Properties	Unit/level	Polyamide PA	Polyester PBT	Polycarbonate PC	Polycarbonate PC-F	ABS
Operating temperature	RTI */**	°C ≤ 105	°C ≤ 105	°C ≤ 125	°C ≤ 120	°C ≤ 80

**Tightening torque of terminal block screws**

IEC 60947-1/EN 60947-1, modified, Table 4 specifies tightening torques for screw connections based on the screw size for electrical and mechanical type tests.

**Extract from IEC 60 947-1/EN 60 947-1, Table 4**  
The torque according to IEC and the recommended tightening torque for Phoenix Contact terminal blocks are specified.

Thread	Head screw with slot	
	Torque [Nm]	Recommended tightening torque [Nm]
M2.5 (M2.6)	0.4	0.4 - 0.5
M3	0.5	0.5 - 0.6
M3.5	0.8	0.8 - 1.0
M4	1.2	1.2 - 1.5
M5	2.0	3
M6	2.5	4

## Connection cross section

The rated cross sections of modular terminal blocks must be specified by the manufacturer in accordance with IEC 60947-7-1. The rated cross section is the maximum conductor cross section that can be connected in single-, multi- or fine-strand versions subject to specific thermal, mechanical and electrical requirements.

The manufacturer must also specify the **rated connection capacity**, i.e., the area of the conductor that can be connected, as well as the number of conductors that can be connected simultaneously and the necessary preparation of the conductor ends. The conductors can be **solid (single or multi-strand)** or **stranded (fine-strand)**.

These values can be found in the product-specific technical data.

The rated connection capacity of the Phoenix Contact modular terminal blocks usually exceeds standard requirements, which specify that it must only be possible to connect one conductor with one of the two next smallest cross sections, excluding the rated cross section (standardized for the cross section range from 0.2 to 35 mm<sup>2</sup>).

In addition, conductors with a rated cross section can usually be wired with ferrules with plastic sleeve.

Phoenix Contact modular terminal blocks are designed to allow copper conductors to be connected to them untreated. "Special treatment" or the use of ferrules – both permitted according to IEC 60947-7-1 – is not

required. If ferrules are nevertheless used to protect stranded conductors against splicing, the connection capacity of the stranded conductor is generally reduced by one level.

Structure and dimensions of connecting cables

### EMC: Class A product:

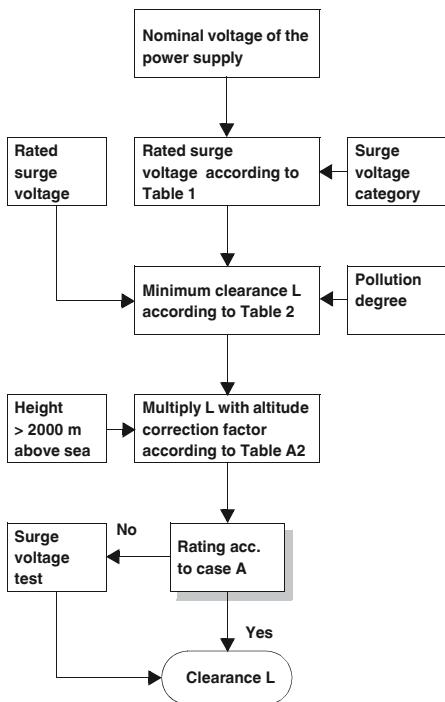

In accordance with statutory regulations, our products are indicated with this footnote if they are intended for use in industrial environments. This means that the permissible limit values for residential applications may be exceeded in the event of conducted and emitted interference. In such cases, the operator may have to take additional safety measures in order to ensure electromagnetic compatibility in residential applications.

### Note:

Subject to changes that serve the purpose of technical progress.

## Dimensioning of clearances

### Schematic for determining clearances

### Altitude correction factors (extract from Table A.2)

Height in m	Normal air pressure in kPa	Multiplication factor for gaps
2000	80.0	1.00
3000	70.0	1.14
4000	62.0	1.29
5000	54.0	1.48
6000	47.0	1.70
7000	41.0	1.95
8000	35.5	2.25
9000	30.5	2.62
10000	26.5	3.02
15000	12.0	6.67
20000	5.5	14.50

### Rated surge voltages for items that are directly supplied by the low-voltage network (extract from Table 1)

Nominal voltage of the power supply system <sup>1)</sup> (mains) acc. to IEC 60038 <sup>3)</sup> [V]		Conductor-neutral conductor voltage derived from the total nominal AC voltage or nominal DC voltage	Rated surge voltage <sup>2)</sup> [V]			
Three-phase	Single-phase	[V]	I	II	III	IV
230/400 277/480 400/690	120 to 240	50	330	500	800	1500
		100	500	800	1500	2500
		150	800	1500	2500	4000
		300	1500	2500	4000	6000
		600	2500	4000	6000	8000
		1000	4000	6000	8000	12000

<sup>1)</sup> Refer to Appendix B for application in existing deviating low-voltage networks and their nominal voltages.

<sup>2)</sup> Items with this rated surge voltage may be used in systems in accordance with IEC 60364-4-443.

<sup>3)</sup> The slash, i.e., /, indicates a three-phase 4-conductor system. The lower value is the conductor-to-neutral conductor voltage, whereas the higher value is the conductor-to-conductor voltage. When only one value is specified, it refers to a three-phase 3-conductor system, and indicates the conductor-to-conductor voltage.

<sup>4)</sup> Refer to 2.2.2.1.1 for an explanation of surge voltage categories.

### Minimum clearances for surge voltages (extract from Table 2)

Required impulse withstand voltage <sup>1)</sup> <sup>5)</sup>	Condition A			Condition B		
	Non-homogeneous field (refer to 1.3.15)			Homogeneous field (refer to 1.3.14)		
	1 [mm]	2 [mm]	3 [mm]	1 [mm]	2 [mm]	3 [mm]
0.33 <sup>2)</sup>	0.01			0.01		
0.40	0.02			0.02		
0.5 <sup>2)</sup>	0.04	0.2 <sup>3)</sup> <sup>4)</sup>		0.04		
0.60	0.06			0.06		
0.80 <sup>2)</sup>	0.10			0.10		
1.0	0.15			0.15		
1.2	0.25	0.25		0.2		
1.5 <sup>2)</sup>	0.5	0.5		0.3		
2.0	1.0	1.0	1.0	0.45		
2.5 <sup>2)</sup>	1.5	1.5	1.5	0.6		
3.0	2.0	2.0	2.0	0.8		
4.0 <sup>2)</sup>	3	3	3	1.2		
5.0	4	4	4	1.5		
6.0 <sup>2)</sup>	5.5	5.5	5.5	2		
8.0 <sup>2)</sup>	8	8	8	3		
10	11	11	11	3.5		
12 <sup>2)</sup>	14	14	14	4.5		
15	18	18	18	5.5		
20	25	25	25	8		
25	33	33	33	10		
30	40	40	40	12.5		
40	60	60	60	17		
50	75	75	75	22		
60	90	90	90	27		
80	130	130	130	35		
100	170	170	170	45		

<sup>1)</sup> This voltage is:

- For function insulation: the highest surge voltage expected for the clearance
- For basic insulation, if influenced directly or considerably by surge voltages from the low-voltage network: the item's rated surge voltage

<sup>2)</sup> For a different basic insulation: the highest surge voltage possible in the circuit

<sup>3)</sup> Preferred values

<sup>4)</sup> For PCBs, the values of pollution degree 1 are applicable, except that no deviation below the value of 0.04 mm is permitted, as specified in Table 4.

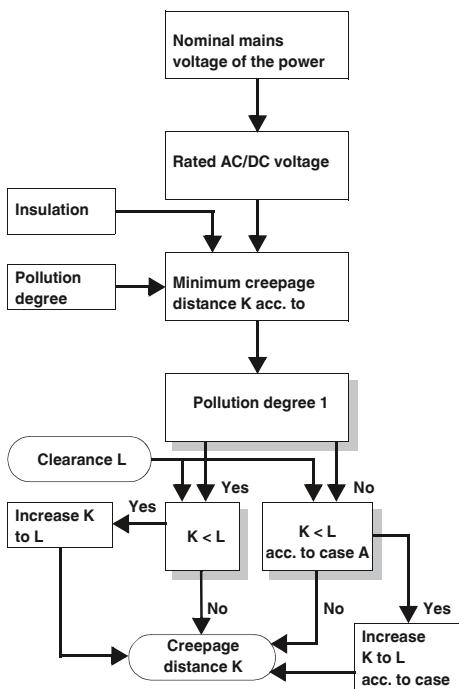

<sup>5)</sup> Minimum clearances for pollution degrees 2 and 3 are based on the corresponding creepage distances. This resistance is reduced due to the effects of humidity.

<sup>6)</sup> Values can be interpolated for parts or circuits within items that are subjected to surge voltages.

<sup>7)</sup> The distances for pollution degree 4 are equal to those for pollution degree 3, except that the minimum clearance is 1.6 mm.

## Dimensioning of creepage distances

### Schematic for determining creepage distances

Single-phase 3 or 2-conductor AC or DC voltage systems (extract from Table 3a)

Nominal voltage of the power supply system (mains) *	Voltages for Table 4

1000 **)	1000	-

<sup>1)</sup> Conductor-ground insulation levels for non-grounded systems or those grounded through impedance correspond to conductor-conductor insulation levels as the operating voltage of every conductor to ground can, in practice, reach the conductor-conductor voltage. This is due to the fact that the actual voltage to ground is determined by the insulation resistance and the capacitive reactance of each conductor to ground. A low (but permissible) insulation resistance of one conductor can thereby practically ground it and increase the other two to conductor-conductor voltage to ground.

<sup>\*</sup>) Refer to 2.2.1 for correlation with the rated voltage.

<sup>\*\*)</sup> These values correspond to the values in Table 1.

<sup>1)</sup> Conductor-ground insulation levels for non-grounded systems or those grounded through impedance correspond to conductor-conductor insulation levels as the operating voltage of every conductor to ground can, in practice, reach the conductor-conductor voltage. This is due to the fact that the actual voltage to ground is determined by the insulation resistance and the capacitive reactance of each conductor to ground. A low (but permissible) insulation resistance of one conductor can thereby practically ground it and increase the other two to conductor-conductor voltage to ground.

<sup>2)</sup> For items designed for use in three-phase 4-conductor and three-phase 3-conductor systems, grounded as well as non-grounded, only the values for 3-conductor systems may be used.

<sup>\*</sup>) Refer to 2.2.1 for correlation with the rated voltage.

<sup>\*\*)</sup> These values correspond to the values in Table 1.

### Creepage distances to prevent failures occurring due to creepage (extract from Table 4)

<sup>1)</sup> This voltage is:

- a) For function insulation: the working voltage
- b) For basic and additional insulation of a circuit supplied directly by the low-voltage network: either the voltage selected from Table 3a or 3b on the basis of the rated voltage of the equipment or the rated insulation voltage

c) For basic and additional insulation of systems, equipment and internal circuits which are not supplied directly from the mains: the highest r.m.s. value of the voltage that, within the bounds of the rated data, can occur in the system, the equipment or the internal circuit, when supplied with rated voltage and in the case of the most unfavorable combination of operating conditions.

<sup>2)</sup> With pollution degree 3, insulation material group IIIb is not recommended for use if voltages are greater than 630 V.
