

VARIANT 14 PUSH-PULL ASSEMBLY FOR SEVERAL COMMON CORES

PRJ-13-000001658

Variant 14 PushPull

for Automation & Control

(108-94207-1)

1. SCOPE

1.1 Content

This specification covers the performance, tests and quality requirements for Variant 14 Push-Pull Assembly Plug / Jack with several common cores via IEC 61076-3-117.

RJ45 Plug, Push Pull Assy

Fig. B2

1.2 Qualification

The following given specifications and standards shall be used when performing the tests. All tests shall be performed by using the applicable inspection plans and product drawings.

2. APPLICABLE DOCUMENTS

The following documents are part of this specification, if they are referenced. In case of conflict between this specification and the product drawing or of conflict between this specification and the referenced documents, this specification shall take precedence.

2.1 Tyco Electronics Documents

3. **REQUIREMENTS**

3.1 Design and construction

Product shall be of the design, construction and physical dimensions specified on the applicable product drawing

3.2 Materials

The materials used for the product are free of Silicone or Silicone contained release agents and free of unbound Teflon. See drawings for further information and details.

3.3 Ratings

А	Operating temperature	-40℃ +70℃
В	Storage temperature	-40℃ +70℃
С	Degree of protection	IP65 / IP67
D	Signal integrity	acc. Fiber optic Specification
E	Electrical properties	see Industrial Ethernet RJ45
		Connector Specification
F	Dimension of Plug	58mm x 29mm x 23mm
G	Dimension of Jack	52mm x 38mm x 28mm

Electrical characteristics see Specification of Industrial Ethernet RJ45 Connector and Fibre Optic

3.4 Performance and Test Description

The product is designed to meet the electrical, mechanical and environmental performance requirements specified in paragraph 3.5. All tests are performed at ambient environmental conditions per IEC 60512-2 unless specified otherwise.

3.5. Test requirements and Procedures

No.	Test Description	Requirement	Test Procedure						
		General Inspections							
1	Visual and dimensional	Meets requirements of product	According to IEC 60512-1,						
	examination	drawing. There shall be no	test 1a and 1b						
		defect that would impair normal							
		operation.							
Electrical Inspections									
2	Contact resistance (4)	Measuring points see	According to IEC 60512-2-1						
		IEC60603-7	in connected condition						
		Signal contact: max. 20mOhm							
		Shield contact: max. 100mOhm							
3	Insulation resistance	R > 500MOhm	According to IEC 60512-3-1						
		100V ± 15V	in connected condition						
4	Dielectric strength	1000V DC	According to IEC 60512-4-1						
			in connected condition						
		Mechanical Inspections							
			-						
5	Separation and	Rate: 50 mm/min	According to IEC 60512-13-1						
	insertion forces	Insertion force: 45N max.							
		Separation force: 30N max.							
6	Effectiveness of coupling	Rate of load: max. 44,5 N/s	According to IEC 60512-15-6						
	device	50 N for 60s ± 5s							
		No electrical disconnection							
		permitted							
7	Mechanical operation ⁽³⁾	750 cycles - see mechanical	According to IEC 60512-9						
		operation							
		Max. speed 10mm/s;							
		rest 5s							
8	Vibration	f= 10-500Hz, Amplitude= 0,35	According to 60512-6-4						
		mm, acceleration = 50m/s ²	test 6d						
		at room temperature	contact disturbance max.1µs						
			According to IEC 60512-2-5						
1		10 sweeps /axis	test 2e						

9	Shock	50g, 11ms duration of impact,	According to IEC 60512-6-3		
		Acceleration = 500m/s^2			
		Half sinusoidal	max.1μs / 7Ω		
		at room temperature	According to IEC 60512-2-5		
		3 shocks /axis			
10	Cable retention force	89N by cable Ø 6.0mm – 8.0mm	UL 1703, test 22		
		60N by cable Ø 4.8mm – 5.9mm			
		Duration: 60s			
11	Retention force	Test forces: 20N	IEC 60512-		
		Duration: 60s	(1) adapter used in the Plug		
		No physical damage	(2) adapter used in the Frame		
		Environmental Inspections			
		Environmental inspections			
12	Rapid change of	No physical damage	According to IEC 60068-2-14,		
	Temperature	-40℃ to +70℃	Na		
		mated connector,			
		t=0.5h each			
13	Degrees of protection	Class IP6x	According to IEC 60520		
13	Degrees of protection		According to IEC 60529		
	(IP-Code) First reference number	Dust with vacuum			
14		Class IPx5	Apparding to IEC 60520		
14	Degrees of protection		According to IEC 60529		
	(IP-Code) Second reference number	Hose water; cone: 6.3mm Class IPx7			
		Diving; 1m for 0.5h			
15	Degrees of protection	Class IPx8	Apparding to IEC 60520		
15	U I		According to IEC 60529		
	(IP-Code) Second reference number	Diving; 1m for 1h			
40			OPTIONAL		
16	Degrees of protection	Class IPx9K	According to IEC		
	(IP-Code)	80℃ / 80bar			
	Second reference number		OPTIONAL		

3.5. Qualification and Requalification Tests Sequence

		Test group ⁽¹⁾								
No.	Test	Α	В	С	D	Е	F	G	H	I
		Test sequence ⁽²⁾								
1	Visual and dimensional examination	1, 9	1, 9	1, 10						
2	Contact resistance ⁽⁴⁾	2, 4, 6								
3	Insulation resistance		6							
4	Dielectric strength		7							
5	Separation and engagement forces			2						
6	Effectiveness of coupling device	8		3, 5						
7	Mechanical operation ⁽³⁾			4						
8	Vibration	3								
9	Shock	5								
10	Cable retention force		8							
11	Retention force			6						
12	Rapid change of Temperature		3	8						
13	Degrees of protection (IP6x)		5							
14	Degrees of protection (IPx5 / IPx7)	7	2, 4	7, 9						
15	Degrees of protection (IPx8) OPTIONAL		4a							
16	Degrees of protection (IPx9K) OPTIONAL		4b							

- (1) See paragraph 4.1 A
- (2) Numbers indicate sequence in which tests are performed.
- (3) After test, traces of usage are allowed.
- (4) Wire resistance subtracted from the overall resistance

4. QUALITY ASSURANCE PROVISIONS

4.1 Qualification Testing

A Sample selection

The samples shall be prepared in accordance with product drawings. They shall be selected at random from the production.

Test states A	2000	Variant 11 Diversity D 115 Ones	DNI: 0400004.4
Test group A	3pcs	Variant 14 Plug with RJ45, 8pos	PN: 2120864-1
	3pcs	Variant 14 Jack metal CAT 5e, Pass Through	PN: 2120871-1
	3pcs	Variant 14 Plug with FO, LC, Single Mode	PN: 3-2120864-1
	3pcs	Variant 14 Jack with FO, LC Single Mode	PN: 3-2120871-1
Test group B	6pcs	Variant 14 Plug with RJ45, 8pos	PN: 2120864-1
	6pcs	Variant 14 Jack metal CAT 5e, Pass Through	PN: 2120871-1
Test group C	3pcs	Variant 14 Plug with RJ45, 8pos	PN: 2120868-1
	3pcs	Variant 14 Jack metal CAT 5e, Pass Through	PN: 2120871-1
	3pcs	Variant 14 Plug (for mechanical operation only)	PN: 2120886-1
	3pcs	Variant 14 Jack (for mechanical operation only)	PN: 2120869-1

Test groups consist of:

B Test sequence

Qualification inspection shall be verified by testing samples as specified in paragraph 3.6.

4.2 Requalification Testing

If changes affecting significantly form, fit or function are made to the product or to the manufacturing process, product assurance shall coordinate requalification testing, consisting of all or part of the original testing sequence as determined by development/product, quality, and reliability engineering.

4.3 Acceptance

Acceptance is based on verification that the product meets the requirements of paragraph 3.5. Failures attributed to equipment, test setup, or operator deficiencies shall not disqualify the product.

When product failure occurs, corrective action shall be taken and samples are resubmitted for qualification. Testing to confirm corrective action is required before resubmittal.

4.4 Quality and Conformance Inspection

The applicable TE quality inspection plan will specify the sampling acceptable quality level to be used. Dimensional and functional requirements shall be in accordance with the applicable product drawing and this specification.

A APPENDIX

A.1 Test Setup for Mechanical Vibration Test and Mechanical Shock Test Refer to test No. 8 on page 7 and to test No. 9 on page 8

For the mechanical and vibration test, it is important to fix the Specimens on a fixing plate. Fix the cable and the screw according to fig. C1

A.2 Test Setup for Cable Retention Force

Refer to test No. 10 on page 8

For the Cable Retention Force test, it is important to test without connection to common cores. Also the PushPull connector have to fix that by test procedure no influence of connector comes in. Before test can start cable screw joint prepared to tighten to a torque of 1.4Nm±0.1Nm. Test on cable according fig. C2

Direction of cable retention force

Fig. C2

A.3 Test Setup for Adapter Retention Force on Plug and Frame Refer to test No. 11 on page 8

For the Retention Force test, it is important to test without connected cables or counterpart. Test according to fig. C3 and C4

Fig. C3

Fig. C4
