■ Features :

* Universal AC input / Full range
* Built-in active PFC function
* Protections: Short circuit / Overload / Over voltage / Over temperature
* Forced air cooling by built-in DC fan
* With DC OK Signal output
* Current sharing up to 2400W(3+1)
* Built-in remote ON-OFF control
* Built-in remote sense function
* Fixed switching frequency at PFC:88KHz PWM:100KHz
* Operating altitude up to 3000 meters (Note.6)
* 3 years warranty

	DIMENSION	170*120*93mm (L*W*H)						
	PACKING	1.9Kg; 8pcs/15.5Kg/1.00CUFT						
NOTE		1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25℃ of ambient temperature. 2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor. 3. Tolerance : includes set up tolerance, line regulation and load regulation. 4. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 360mm*360mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies." (as available on http://www.meanwell.com) 5. Derating may be needed under low input voltages. Please check the derating curve for more details. 6. The operating altitude is 2000 meters for CCC, 3000 meters for UL,TUV. The ambient temperature derating of 5℃/1000m is needed for operating altitude greater than 2000m (6500ft). ※ Product Liability Disclaimer : For detailed information, please refer to https://www.meanwell.com/serviceDisclaimer.aspx

POK Signal

POK Signal is the voltage difference between
"RCG" and "POK" pin output POK Signal for TTL level signal
PSU turn on: 3.3V ~ 5.6V
PSU turn off: 0V ~ 1V

Remote Sensing

Remote Control
Power ON: RCG and RC for short
Power OFF: RCG and RC for open

■ Parallel Operation with Remote Sensing

(1) Parallel operation is available by connecting the units shown as below (+S,-S and P are connected mutually in parallel) :

(2) The voltage difference among each output should be minimized that less than 0.2V is required.

(3) The total output current must not exceed the value determined by the following equation (Output current at parallel operation)
= (The rated current per unit) x (Number of unit) x 0.9.

(4) In parallel operation 4 units is the maximum, please consult the manufacture for other applications.

(5) When remote sensing is used in parallel operation, the sensing wire must be connected only to the master unit.

(6) When in parallel operation, the minimum output load should be greater than 3% of total output load.
(Min. load > 3% rated current per unit x number of unit)
