

MADR-007097

Rev. V4

Features

- Moderate Speed, CMOS Technology (25 ns)
- Complementary Outputs
- High Drive Current Capability (±50 mA)
- Low Current Consumption
- Lead-Free SOIC-8 Plastic Package
- 260°C Reflow Compatible
- RoHS* Compliant Version of DR65-0003
- Tape and Reel Packaging Available

Applications

- Aerospace & Defense
- ISM

Description

The MADR-007097 is a SPDT driver used to interface between TTL logic signals and PIN diode based microwave switches. High-speed analog CMOS technology is used to achieve low power consumption at moderate speeds. Low output resistances allow it to develop high output current spikes to ensure fast switching speeds. The complementary output stages are structured so it can be used as an inverting or non-inverting driver for SPST switches, or as a single input, complementary driver for SPDT switches.

The monolithic die is packaged in a SOIC-8, plastic surface mount package and is available in tape and reel packaging for high volume applications.

The MADR-007097 driver is ideally suited for driving MACOM's line of HMIC switches.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.
