

The Jonard Tools HSC-QR series coaxial coring and stripping tools are a kit consisting of a jacket stripping tool and a HSC-QR series coring tool. These coring and stripping tools are specifically designed to work on Commscope Quantum Reach cables. The coring tool and jacket stripper are designed to allow the jacket stripper to be stored on the coring tool for convenience.

The HSC-QR series is a rugged tool with a heavy-duty aluminum body and special ratcheting handle for comfort. The stripping and coring blades are high carbon steel and heat treated for long life. The tool is designed to be easily used with a drill by simply removing the T handle.
