

**Space-saving  
4-channel type  
with built-in input resistor**

**PhotoMOS®  
RF SOP 4 Form A CxR10  
Voltage-sensitive (AQS221FO2S)**

**RoHS compliant**

### FEATURES

**1. Built-in input resistor means less man-hours when mounting**

The voltage-sensitive type, which eliminates the need to mount an external input resistor, is now available in a small package. Man-hours spent mounting external input resistors are cut and board designing is simplified.

**2. Saves space on PC board**

Since the small package size remains the same while including a built-in input resistor, space on the PC board is saved. This makes it easier to incorporate space savings when designing miniature devices.

**3. Both low on-resistance (R type) and low capacitance (C type) available at excellent electrical characteristics of CxR10**

- R type: On resistance 0.8Ω (typ.)  
Output capacitance 14pF (typ.)
- C type: On resistance 9.5Ω (typ.)  
Output capacitance 1.1pF (typ.)

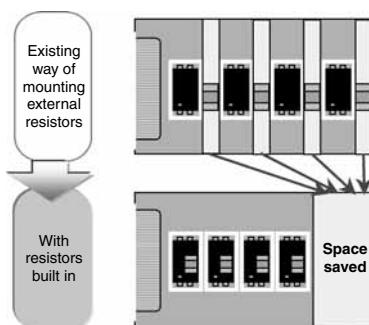

### TYPICAL APPLICATIONS

**For multi-circuit switching;**

**1. Measuring and testing equipment**  
Semiconductor testing equipment, Probe cards, Datalogger, Board tester and other testing equipment

**2. Telecommunication and broadcasting equipment**

**3. Medical equipment**
