## Vacuum Handling Tool

**Specifications** 

Vacuum Handling Tool Kit Static Dissipative

Comes with: 1/8" cup mounted directly on tip 1/4" cup on bent probe 3/8" cup on straight probe

Low cost high quality pick-and-place tool

How to Use

- 1. Select a tip with a rubber vacuum cup that is slightly smaller than the area at which you want to pick-and-place the part from.
- 2. Push the vacuum cup, or vacuum cup and probe tip, snugly onto the end of the vacuum tool.
- 3. Make sure that there is no dust on the rubber vacuum cup. Note: if preferred, the rubber cups can be placed directly on the vacuum tool without using the straight or bent probes.
- 4. Gently squeeze the vacuum tool bulb, and place the soft rubber vacuum cup squarely onto the pick-and-place part, then relax the bulb. This will create a vacuum that will hold the part firmly. Note: it is normal for the vacuum created to slowly lose its strength over 30-60 seconds, so placing your part within this time is recommended.
- 5. Move the part to where you want to place it, lower it to the board, then squeeze the bulb again to release the part.

## **Applications**

Pick-and-place of metal, plastic, or any parts having a smooth non-porous top surface area that the rubber vacuum cup can seal against. For larger parts, use the larger vacuum cup.
