### ASSR-1218, ASSR-1219 and ASSR-1228

Form A, Solid State Relay (Photo MOSFET)  $(60V/0.2A/10\Omega)$ 

### **Data Sheet**

#### **Description**

The ASSR-12XX Series consists of an AlGaAs infrared light-emitting diode (LED) input stage optically coupled to a high-voltage output detector circuit. The detector consists of a high-speed photovoltaic diode array and driver circuitry to switch on/off two discrete high voltage MOSFETs. The relay turns on (contact closes) with a minimum input current of 3mA through the input LED. The relay turns off (contact opens) with an input voltage of 0.8V or less.

The single channel configurations, ASSR-1218 and ASSR-1219, are equivalent to 1 Form A Electromechanical Relays (EMR), and the dual channel configuration, ASSR-1228, is equivalent to 2 Form A EMR. They are available in 4-pin SO, 6-pin DIP, 8-pin DIP and Gull Wing Surface Mount for DIP packages. ASSR-1219 enables AC/DC and DC-only output connections. For DC-only connection, the output current, lo, increases to 0.4A and the on-resistance, R(ON) reduces to  $2.5\Omega$ .

#### **Functional Diagram**

#### **Features**

- Compact Solid-State Bi-directional Signal Switch
- Single and Dual Channel Normally-off Single-Pole-Single-Throw (SPST) Relay
- 60V Output Withstand Voltage
- 0.2A or 0.4A Current Rating (See Schematic for ASSR-1219 Connection A and B)
- Low Input Current: CMOS Compatibility
- Low On-Resistance:  $0.25\Omega$  Typical for DC-only,  $1\Omega$  Typical for AC/DC
- High Input-to-Output Insulation Voltage (Safety and Regulatory Approved)
  - 3750 Vrms for 1 min per UL1577
  - CSA Component Acceptance

#### **Applications**

- Telecommunication Switching
- Data Communications
- Industrial Controls
- Medical
- Security
- EMR / Reed Relay Replacement

**CAUTION:** It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

#### **Ordering Information**

ASSR-xxxx is UL Recognized with 3750 Vrms for 1 minute per UL1577 and is approved under CSA Component Acceptance Notice #5.

|             | Option         |                  |               |                  |             |                     |

Note: option x2xE for UL1577 5000Vrms for 1 minute will be offered to DIP-6 and DIP-8 only. ASSR-1218 in SO4 is tested at 3750Vrms

To order, choose a part number from the part number column and combine with the desired option from the option column to form an order entry.

#### Example 1:

ASSR-1219-501E to order product of 300mil DIP-6 Gull Wing Surface Mount package in Tape and Reel packaging and RoHS Compliant.

#### Example 2:

ASSR-1228-002E to order product of 300mil DIP-8 package in tube packaging and RoHS Compliant.

Option datasheets are available. Contact your Avago sales representative or authorized distributor for information.

### ASSR-1219 6-Pin DIP Package with Gull Wing Surface Mount Option 300

NOTE: FLOATING LEAD PROTRUSION IS 0.25 mm (10 mils) MAX.

#### ASSR-1228 8-Pin DIP Package

#### ASSR-1228 8-Pin DIP Package with Gull Wing Surface Mount Option 300

DIMENSIONS IN MILLIMETERS (INCHES). LEAD COPLANARITY = 0.10 mm (0.004 INCHES).

NOTE: FLOATING LEAD PROTRUSION IS 0.25 mm (10 mils) MAX.

#### **Lead Free IR Profile**

Non-halide flux should be used

### **Regulatory Information**

The ASSR-1218, ASSR-1219 and ASSR-1228 are approved by the following organizations:

#### UL

Approved under UL 1577, component recognition program up to  $V_{ISO} = 3750 \, V_{RMS}$ 

#### CSA

Approved under CSA Component Acceptance Notice #5.

### **Insulation and Safety Related Specifications**

| Parameter  | Symbol | ASSR-1218 | ASSR-1219<br>ASSR-1228 | Units | Conditions   |
|--|--------|-----------|------------------------|-------|--|

#### Notes

- 1. For derating, refer to Figure 1, 2, 3 and 4.
- 2. The voltage across the output terminals of the relay should not exceed this rated withstand voltage. Over-voltage protection circuits should be added in some applications to protect against over-voltage transients.
- 3. Threshold to switch device is  $I_F \ge 0.5$ mA, however, for qualified device performance over temperature range, it is recommended to operate at  $I_F = 5$ mA.
- 4. Device is considered as a two terminal device:

ASSR-1218 - pin 1, 2 shorted and pin 3, 4 shorted.

ASSR-1219 - pin 1, 2, 3 shorted and pin 4, 5, 6 shorted.

ASSR-1228 - pin 1, 2, 3, 4 shorted and pin 5, 6, 7, 8 shorted.

- 5. The Input-Output Momentary Withstand Voltage is a dielectric voltage rating that should not be interpreted as an input-output continuous voltage rating. For the continuous voltage rating refer to the IEC/EN/DIN EN 60747-5-2 Insulation Characteristics Table (if applicable), your equipment level safety specification, or Avago Technologies Application Note 1074, "Optocoupler Input-Output Endurance Voltage."
- 6. During the pulsed  $R_{(ON)}$  measurement ( $I_O$  duration  $\leq$ 30ms), ambient ( $I_A$ ) and case temperature ( $I_C$ ) are equal.

#### **Application Information**

#### **On-Resistance and Derating Curves**

The Output On-Resistance, R<sub>(ON)</sub>, specified in this data sheet, is the resistance measured across the output contact when a pulse current signal (lo=200mA) is applied to the output pins. The use of a pulsed signal (≤30ms) implies that each junction temperature is equal to the ambient and case temperatures. The steady-state resistance, Rss, on the other hand, is the value of resistance measured across the output contact when a DC current signal is applied to the output pins for a duration sufficient to reach thermal equilibrium. Rss includes the effects of the temperature rise in the device.

Figure 1, 2, 3 and 4 specify the maximum average output current allowable for a given ambient temperature. The maximum allowable output current and power dissipation are related by the expression Rss = Po(max)/(lo(max))<sup>2</sup> from which Rss can be calculated. Staying within the safe area assures that the steady state MOSFET junction temperature remains less than 125 °C.
