

MICROCHIP

**EVB-KSZ8563
Evaluation Board
User's Guide**

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

**QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV
= ISO/TS 16949 =**

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELoq® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.

NOTES:

Preface

NOTICE TO CUSTOMERS

All documentation becomes dated, and this manual is no exception. Microchip tools and documentation are constantly evolving to meet customer needs, so some actual dialogs and/or tool descriptions may differ from those in this document. Please refer to our web site (www.microchip.com) to obtain the latest documentation available.

Documents are identified with a “DS” number. This number is located on the bottom of each page, in front of the page number. The numbering convention for the DS number is “DSXXXXA”, where “XXXX” is the document number and “A” is the revision level of the document.

For the most up-to-date information on development tools, see the MPLAB® IDE online help. Select the Help menu, and then Topics to open a list of available online help files.

INTRODUCTION

This chapter contains general information that will be useful to know before using the KSZ8563. Items discussed in this chapter include:

- [Document Layout](#)
- [Conventions Used in this Guide](#)
- [The Microchip Web Site](#)
- [Development Systems Customer Change Notification Service](#)
- [Customer Support](#)
- [Document Revision History](#)

DOCUMENT LAYOUT

This document describes how to use the EVB-KSZ8563 Evaluation Board as a development tool for the KSZ8563, 3-Port Fast Ethernet Switch with RGMII Interface and IEEE 1588v2 support.

- **Chapter 1. “Overview”** – This chapter provides a brief description of the EVB-KSZ8563 Evaluation Board.
- **Chapter 2. “Board Details and Configuration”** – This chapter includes instructions on how to get started with the EVB-KSZ8563 Evaluation Board.
- **Appendix A. “EVB-KSZ8563 Evaluation Board”** – This appendix shows the physical EVB-KSZ8563 Evaluation Board.
- **Appendix B. “Schematics”** – This appendix shows the EVB-KSZ8563 Evaluation Board schematics.
- **Appendix C. “Bill of Materials”** – This appendix includes the EVB-KSZ8563 Evaluation Board Bill of Materials (BOM).
- **Appendix D. “Silk Screen”** – This appendix includes the EVB-KSZ8563 Evaluation Board silk screen.

CONVENTIONS USED IN THIS GUIDE

This manual uses the following documentation conventions:

| Description | Represents | Examples |
|--|---|---|
| Arial font: | | |
| Italic characters | Referenced books | <i>MPLAB[®] IDE User's Guide</i> |
| | Emphasized text | ...is the <i>only</i> compiler... |
| Initial caps | A window | the Output window |
| | A dialog | the Settings dialog |
| | A menu selection | select Enable Programmer |
| Quotes | A field name in a window or dialog | "Save project before build" |
| Underlined, italic text with right angle bracket | A menu path | <u><i>File>Save</i></u> |
| Bold characters | A dialog button | Click OK |
| | A tab | Click the Power tab |
| N'Rnnnn | A number in verilog format, where N is the total number of digits, R is the radix and n is a digit. | 4'b0010, 2'hF1 |
| Text in angle brackets < > | A key on the keyboard | Press <Enter>, <F1> |
| Courier New font: | | |
| Plain Courier New | Sample source code | #define START |
| | Filenames | autoexec.bat |
| | File paths | c:\mcc18\h |
| | Keywords | _asm, _endasm, static |
| | Command-line options | -Opa+, -Opa- |
| | Bit values | 0, 1 |
| | Constants | 0xFF, 'A' |
| Italic Courier New | A variable argument | <i>file.o</i> , where <i>file</i> can be any valid filename |
| Square brackets [] | Optional arguments | mcc18 [options] <i>file</i> [options] |
| Curly brackets and pipe character: { } | Choice of mutually exclusive arguments; an OR selection | errorlevel {0 1} |
| Ellipses... | Replaces repeated text | var_name [, var_name...] |
| | Represents code supplied by user | void main (void) { ... } |

THE MICROCHIP WEB SITE

Microchip provides online support via our web site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

DEVELOPMENT SYSTEMS CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at www.microchip.com, click on Customer Change Notification and follow the registration instructions.

The Development Systems product group categories are:

- **Compilers** – The latest information on Microchip C compilers, assemblers, linkers and other language tools. These include all MPLAB C compilers; all MPLAB assemblers (including MPASM assembler); all MPLAB linkers (including MPLINK object linker); and all MPLAB librarians (including MPLIB object librarian).
- **Emulators** – The latest information on Microchip in-circuit emulators. This includes the MPLAB REAL ICE and MPLAB ICE 2000 in-circuit emulators.
- **In-Circuit Debuggers** – The latest information on the Microchip in-circuit debuggers. This includes MPLAB ICD 3 in-circuit debuggers and PICkit 3 debug express.
- **MPLAB IDE** – The latest information on Microchip MPLAB IDE, the Windows Integrated Development Environment for development systems tools. This list is focused on the MPLAB IDE, MPLAB IDE Project Manager, MPLAB Editor and MPLAB SIM simulator, as well as general editing and debugging features.
- **Programmers** – The latest information on Microchip programmers. These include production programmers such as MPLAB REAL ICE in-circuit emulator, MPLAB ICD 3 in-circuit debugger and MPLAB PM3 device programmers. Also included are nonproduction development programmers such as PICSTART Plus and PIC-kit 2 and 3.

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at:
<http://www.microchip.com/support>

DOCUMENT REVISION HISTORY

| Revisions | Section/Figure/Entry | Correction |
|---------------------------|--|-------------------------------------|
| DS50002755B (04-17-19) | Figure 2-1, Figure 2-2, Figure 2-3, Figure 2-4, Figure A-1, Figure A-2, Figure D-1, and Figure D-2 | Updated the figures. |
| | Appendix B. "Schematics", Appendix C. "Bill of Materials", and Appendix D. "Silk Screen" | Updated the appendix titles. |
| | All | Removed AVB and 802.1AS references. |
| DS50002755A (05-10-18) | Initial release. | |

Chapter 1. Overview

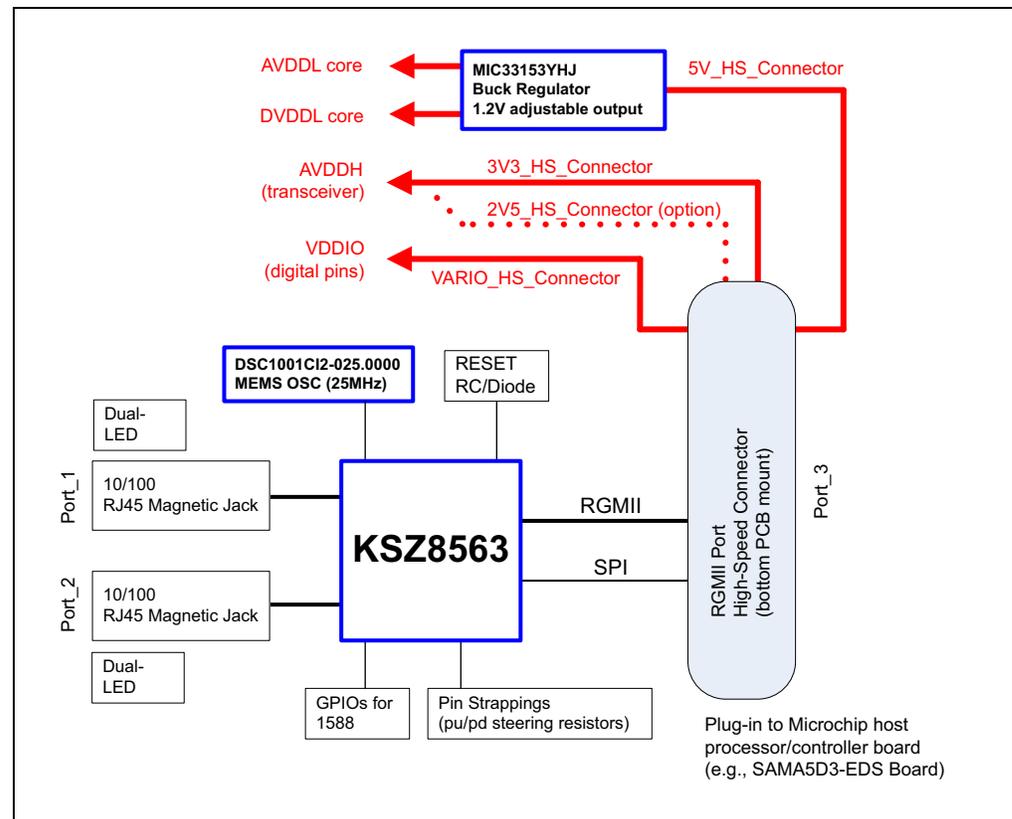

1.1 INTRODUCTION

The EVB-KSZ8563 evaluation board is a plug-in card that interfaces directly with a mating Microchip host processor/controller board, such as the SAMA5D3-EDS board. It features the KSZ8563, a highly-integrated networking device that incorporates a layer-2+ managed Fast Ethernet switch, two 10BASE-T/100BASE-TX physical layer transceivers (PHYs) and associated MAC units, and one MAC port configured as the RGMII interface. The board's two PHY ports are connected to RJ45 Ethernet jacks with integrated magnetics, and the RGMII MAC interface is brought out to a high-speed multi-pin (HS) connector.

As a set, the EVB-KSZ8563 and SAMA5D3-EDS boards provide a highly-flexible platform to allow evaluation of basic KSZ8563 PHY/Switch features using static control-status registers (CSRs) to develop firmware of advanced KSZ8563 MAC/Switch features, such as IEEE1588 PTP and RSTP/MSTP that require interaction with upper network layers.

The scope of this document is meant to describe the EVB-KSZ8563 evaluation board setup and its user interface features. A simplified block diagram of the board is shown in [Figure 1-1](#).

FIGURE 1-1: EVB-KSZ8563 FUNCTIONAL BLOCK DIAGRAM

1.2 REFERENCES

Concepts and materials available in the following documents may be helpful when reading this document. Visit www.microchip.com for the latest documentation.

- *KSZ8563 Data Sheet*
- *EVB-KSZ8563 Schematics*

- *DSC1001 Data Sheet*

Chapter 2. Board Details and Configuration

2.1 INTRODUCTION

The EVB-KSZ8563 is designed as a plug-in card to interface directly with a mating Microchip host processor or controller board, such as the SAMA5D3-EDS board, that supplies full power and provides full register access and configuration via IBA, SPI, or I²C bus management.

2.2 POWER SOURCE

The EVB-KSZ8563 is completely bus-powered from its mating Microchip host processor or controller board. Input power is delivered via the high-speed multi-pin (HS) connector.

Refer to [Figure 2-3](#) and the board schematics in [Appendix B. “Schematics”](#) for details.

2.2.1 Power Probe Points

The power probe points along with the ground test points are shown in [Figure 2-2](#).

2.2.2 Current Access Rework/Probe Points

The EVB-KSZ8563 design is not intended to perform current measurements on the device. If needed, the current access points to measure the current consumption of the KSZ8563 power rails are across the following series ferrite beads to the board powers:

- DVDDL: FB2
- AVDDL: FB3
- VDDIO: FB6
- AVDDH: FB4 for 3.3V (default populate); FB1 for 2.5V (default not populate)

Note: Populate either FB4 only or FB1 only. If 2.5V AVDDH is desired, FB4 should be ‘do not populate’ (DNP) and FB1 should be populated.

Remove the above ferrite beads and place the current probes in series across the power probe points ([Section 2.2.1 “Power Probe Points”](#)) that are joined by the ferrite beads. See also [Appendix B. “Schematics”](#).

Board LED components are connected to the VDDIO power rail, and thus the measured current is higher than the amount consumed by only the KSZ8563 device.

2.3 CLOCK

The EVB-KSZ8563 utilizes the on-board Microchip DSC1001CI2-025.0000 clock chip, a 25-MHz MEMS oscillator, as the input reference clock to the KSZ8563 device. Refer to [Figure 2-1](#) and the board schematics in [Appendix B. “Schematics”](#) for details.

2.4 RESET

2.4.1 Power-On Reset

The discrete RC/Diode (R12, C8, and D3) circuit provides power-on reset to the KSZ8563 device.

2.4.2 Manual Reset

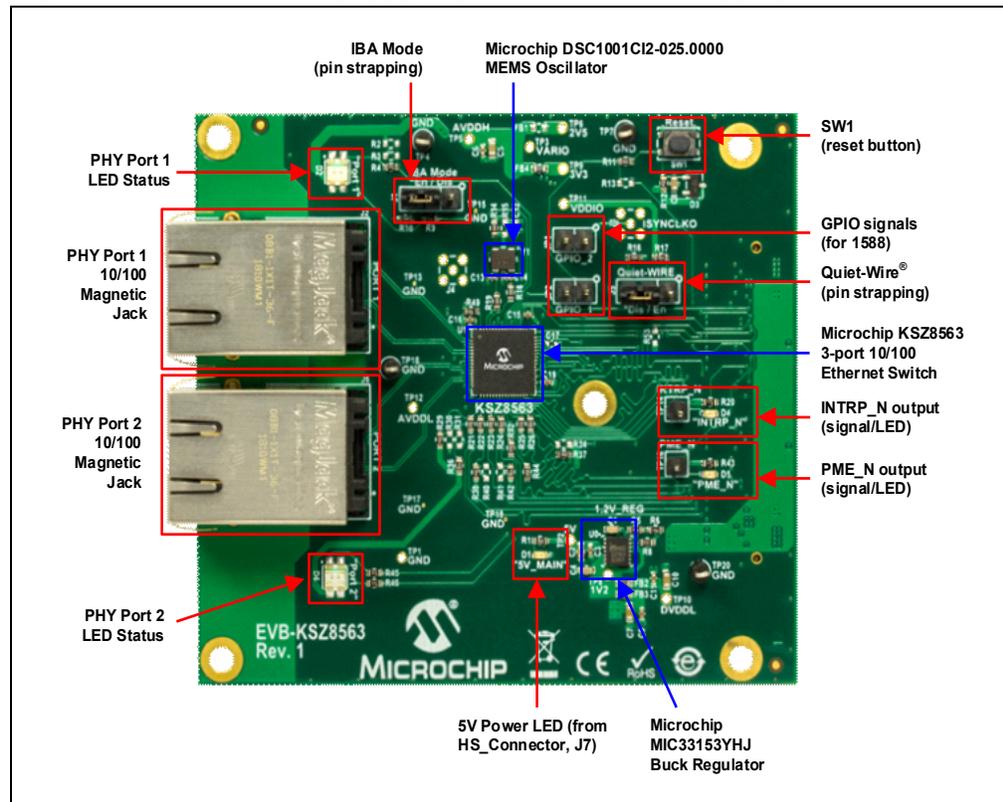

The SW1 reset button can be pressed and released to provide manual reset to the KSZ8563 device after power-up. Refer to [Figure 2-1](#) and the board schematics in [Appendix B. "Schematics"](#) for details.

2.5 BOARD FEATURES AND CONFIGURATION

The following sub-sections describe the board features and configuration settings.

[Figure 2-1](#) displays the top view of the EVB-KSZ8563 with key features, jumpers, and headers highlighted in red, and with Microchip components highlighted in blue.

FIGURE 2-1: EVB-KSZ8563 TOP VIEW WITH CALLOUTS

Board Details and Configuration

Figure 2-2 displays the power probe points along with the ground test points.

FIGURE 2-2: EVB-KSZ8563 POWER/GROUND CALLOUTS

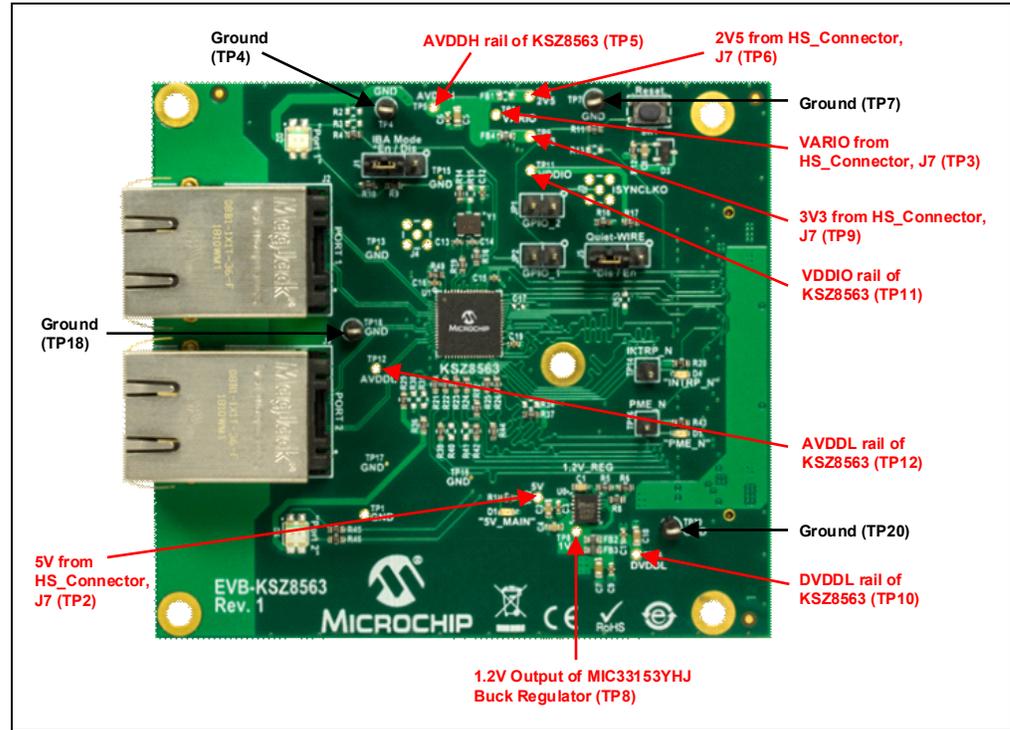

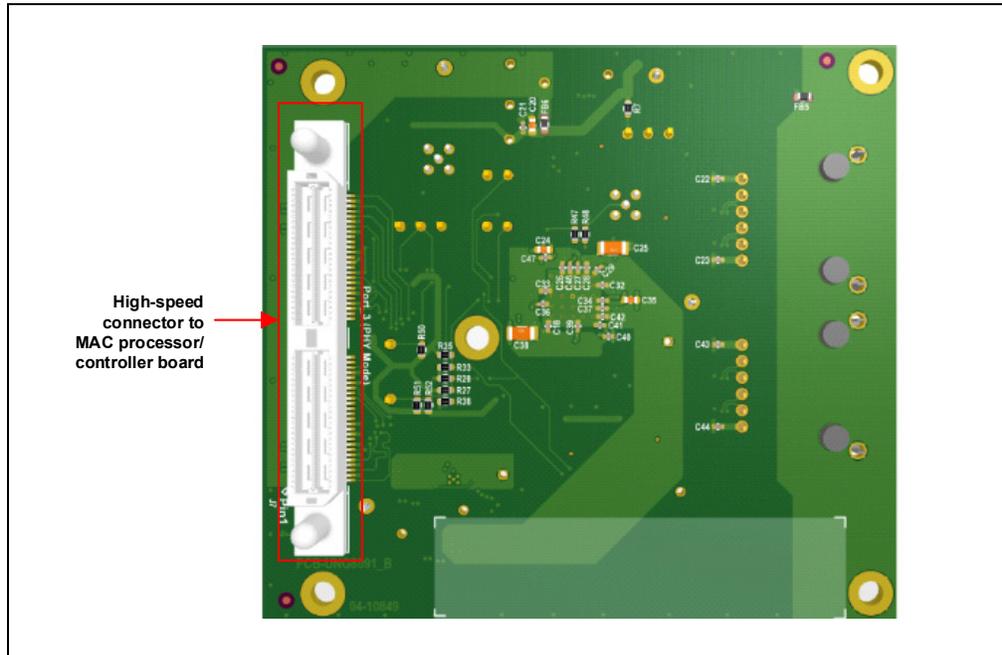

Figure 2-3 displays the bottom view of the EVB-KSZ8563 with the HS connector (J7) (highlighted in red) that plugs directly into a mating Microchip MAC processor or controller board.

FIGURE 2-3: EVB-KSZ8563 BOTTOM VIEW WITH CALLOUT

Board Details and Configuration

2.5.1 PHY Ports - Integrated Magnetic Jacks

PHY ports 1 and 2 (J2 and J6) support 10BASE-T/100BASE-TX with both Auto-Negotiation and Auto MDI/MDI-X enabled as the power-up defaults.

2.5.2 PHY Ports - LEDs

Two Dual-LEDs (D2 and D6) provide the link status for PHY ports 1 and 2, respectively. The LED descriptions are listed in [Table 2-1](#).

TABLE 2-1: PHY PORTS - LED DESCRIPTION

| LED | LED Color | Description |
|--------|-----------|---|
| D2, D6 | Red | Solid Color: 100-Mbps Link Blinking: Activity (RX, TX) |
| | Orange | Solid Color: 10-Mbps Link Blinking: Activity (RX, TX) |
| | Off | Link off |

2.5.3 Pin Strapping Configuration

As the power-up or reset defaults, the KSZ8563 device is configured via internal or external pull-up/down resistors to the following settings:

- **PHY Ports 1 and 2:** Auto-Negotiation enabled and Energy-Efficient Ethernet (EEE) enabled
- **MAC Port 3:** RGMII mode at 1000-Mbps speed
- **Start Switch:** The switch forwards the packets immediately after hardware reset.
- **Management:** SPI Slave mode

The In-band Management Access (IBA) mode and Quiet-Wire[®] pin strappings can be enabled or disabled using the 3-pin jumpers shown in [Table 2-2](#). Set the desired jumper settings prior to board power-up, hardware reset, or both.

TABLE 2-2: PIN STRAPPING JUMPERS

| Jumper | Label | Description | Close Pins 1-2 | Close Pins 2-3 |
|--------|------------|---|----------------|-------------------|
| J1 | IBA Mode | IBA provides full register read and write access via any one of the three data ports. When enabled by pin strapping, IBA defaults to PHY port 1. SPI or I ² C management access is required to enable IBA for MAC port 3 or PHY port 2. | Disable | Enable (default) |
| J5 | Quiet-Wire | Quiet-Wire filtering is implemented on-chip to enhance 100BASE-TX EMC performance by reducing both conducted and radiated emissions from the TXP/M signal differential pair. | Enable | Disable (default) |

Refer to the board schematics in [Appendix B. “Schematics”](#) and the *KSZ8563 Data Sheet* for further details on the pin strappings.

2.5.4 GPIO Signal Headers

Table 2-3 shows the GPIO signals that support the IEEE 1588 Precision Time Protocol (PTP).

TABLE 2-3: GPIO SIGNAL HEADERS

| Header | Label | Description | Pin 1 | Pin 2 |
|--------|--------|---|------------|-------------------------|
| JP1 | GPIO_2 | The GPIO_2 pin is configurable to implement IEEE1588 event trigger outputs and time stamp capture inputs to support real-time application requirements. | No Connect | GPIO_2 (KSZ8563 pin 41) |
| JP2 | GPIO_1 | The GPIO_1 pin is configurable to implement IEEE1588 event trigger outputs and time stamp capture inputs to support real-time application requirements. | Ground | GPIO_1 (KSZ8563 pin 40) |

Refer to the board schematics in [Appendix B. “Schematics”](#) and the *KSZ8563 Data Sheet* for further details and usage on the GPIO signal pins.

2.5.5 INTRP_N Output

The INTRP_N output at test point TP14 provides the interrupt output from the KSZ8563 device. By default, it is active low and drives low to turn on D4 when asserted.

Refer to the board schematics in [Appendix B. “Schematics”](#) and the *KSZ8563 Data Sheet* for further details and usage on the INTRP_N signal.

2.5.6 PME_N Output

The PME_N output at test point TP16 provides the Power Management Event (PME) interrupt output for Wake-on-LAN (WoL) from the KSZ8563 device. By default, it is active low and drives low to turn on D5 when asserted.

Refer to the board schematics in [Appendix B. “Schematics”](#) and the *KSZ8563 Data Sheet* for further details and usage on the PME_N signal.

2.6 USING THE EVB-KSZ8563

The EVB-KSZ8563 plugs in directly to a mating Microchip host controller or processor board, such as the SAMA5D3-EDS board, that delivers full power and provides full register access and configuration via IBA, SPI, or I²C bus management.

Together, the EVB-KSZ8563 and the SAMA5D3-EDS enable Ethernet traffic switching across all three data ports of the KSZ8563 device with RGMII MAC port 3 connecting to the SAMA5D3 processor and PHY ports 1 and 2 connecting via copper Ethernet cable (CAT-5 UTP or better) to external Ethernet devices.

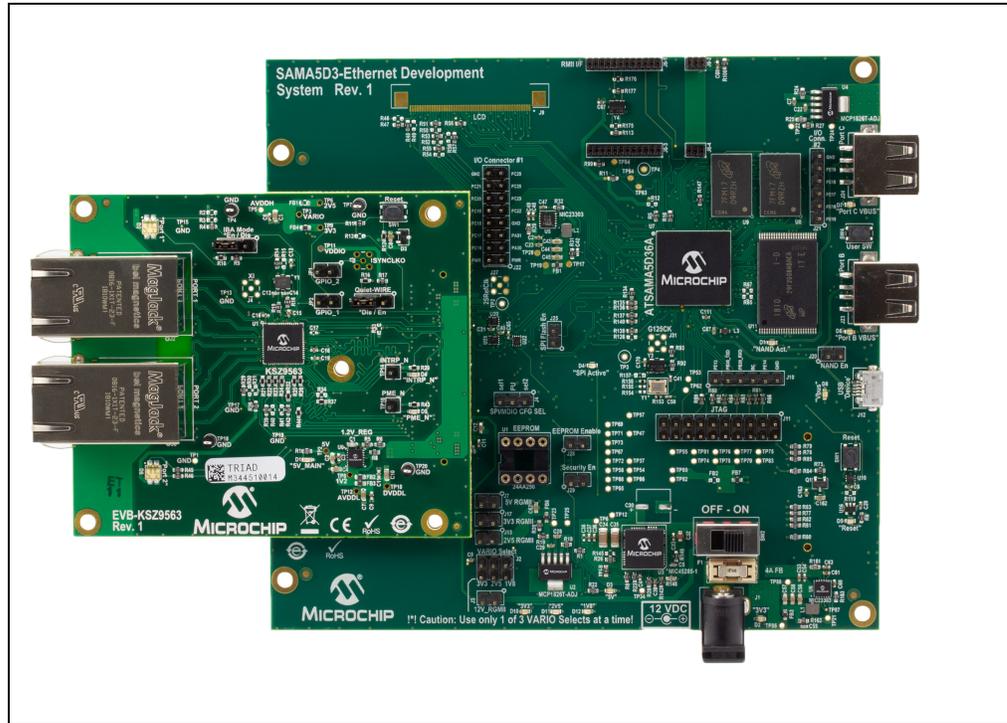

All KSZ8563 registers are accessible via IBA, SPI, or I²C bus management from the SAMA5D3-EDS board, enabling full evaluation and firmware development for all KSZ8563 MAC/Switch features and interaction with upper network layers.

Refer to the SAMA5D3-EDS board documentation on its usage.

[Figure 2-4](#) shows a switch EVB connected to the SAMA5D3-EDS board.

Board Details and Configuration

FIGURE 2-4: EXAMPLE OF SWITCH EVB WITH SAMA5D3-EDS FOR FIRMWARE DEVELOPMENT

NOTES:

Appendix A. EVB-KSZ8563 Evaluation Board

A.1 INTRODUCTION

This appendix shows the EVB-KSZ8563 evaluation board.

FIGURE A-1: EVB-KSZ8563 EVALUATION BOARD (TOP VIEW)

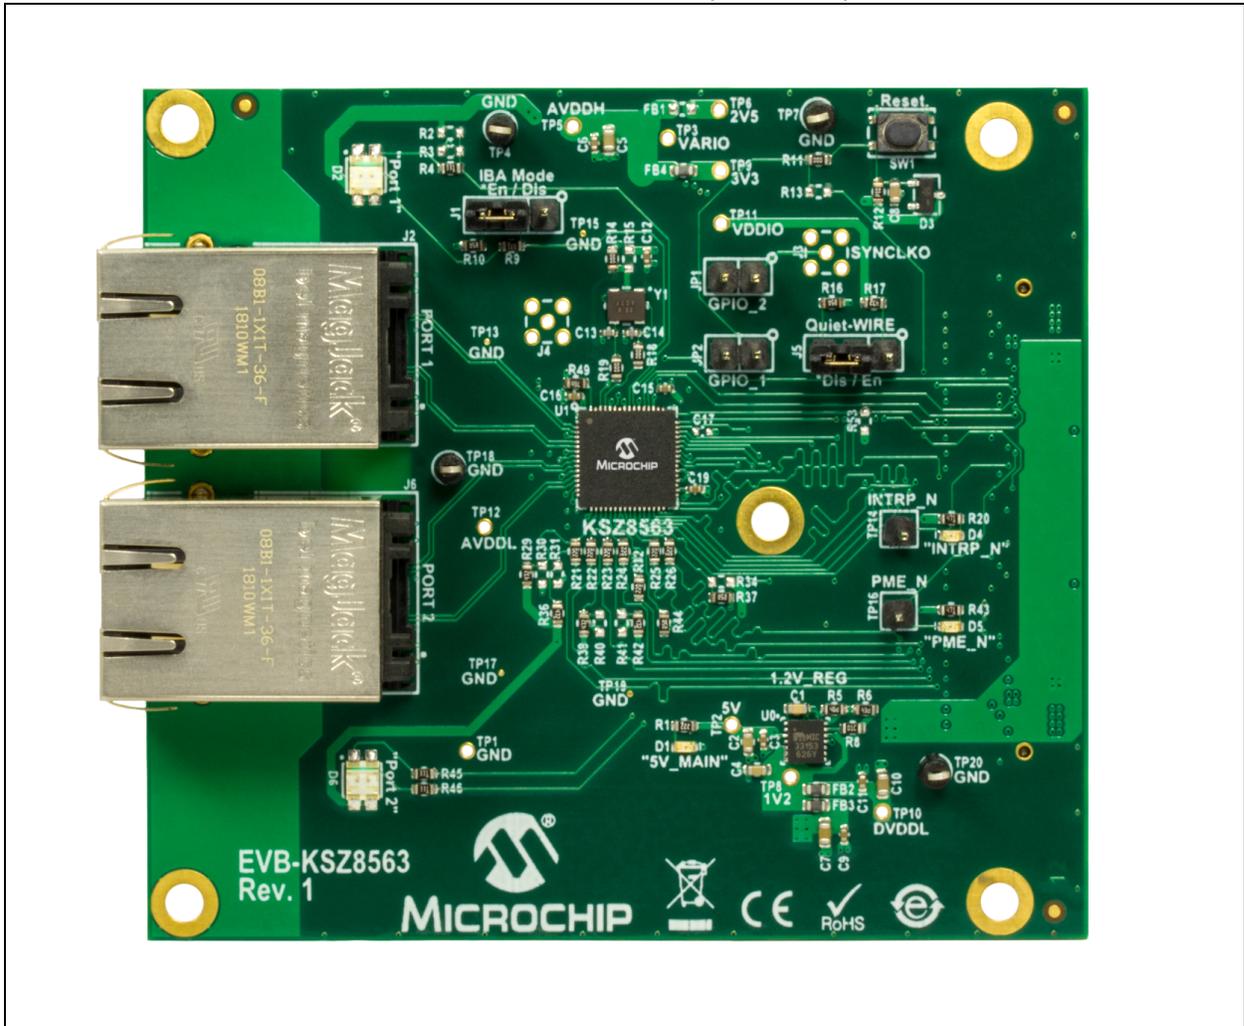

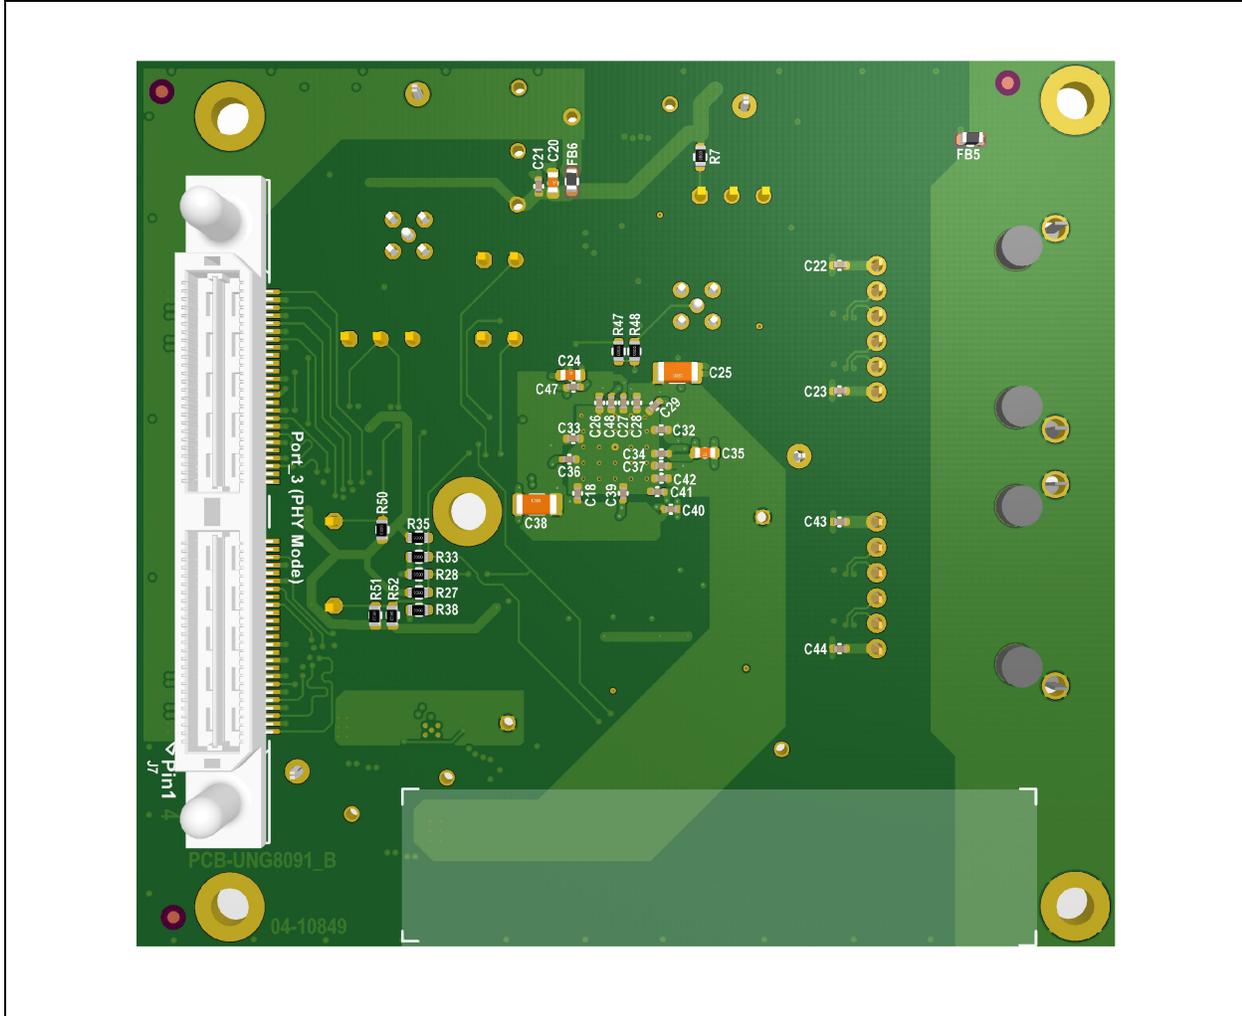

FIGURE A-2: EVB-KSZ8563 EVALUATION BOARD (BOTTOM VIEW)

Appendix B. Schematics

B.1 INTRODUCTION

This appendix includes the EVB-KSZ8563 schematics.

FIGURE B-1: EVB-KS28563 SCHEMATICS - KS28563 DEVICE, PIN STRAPPING, CLOCK, AND RESET

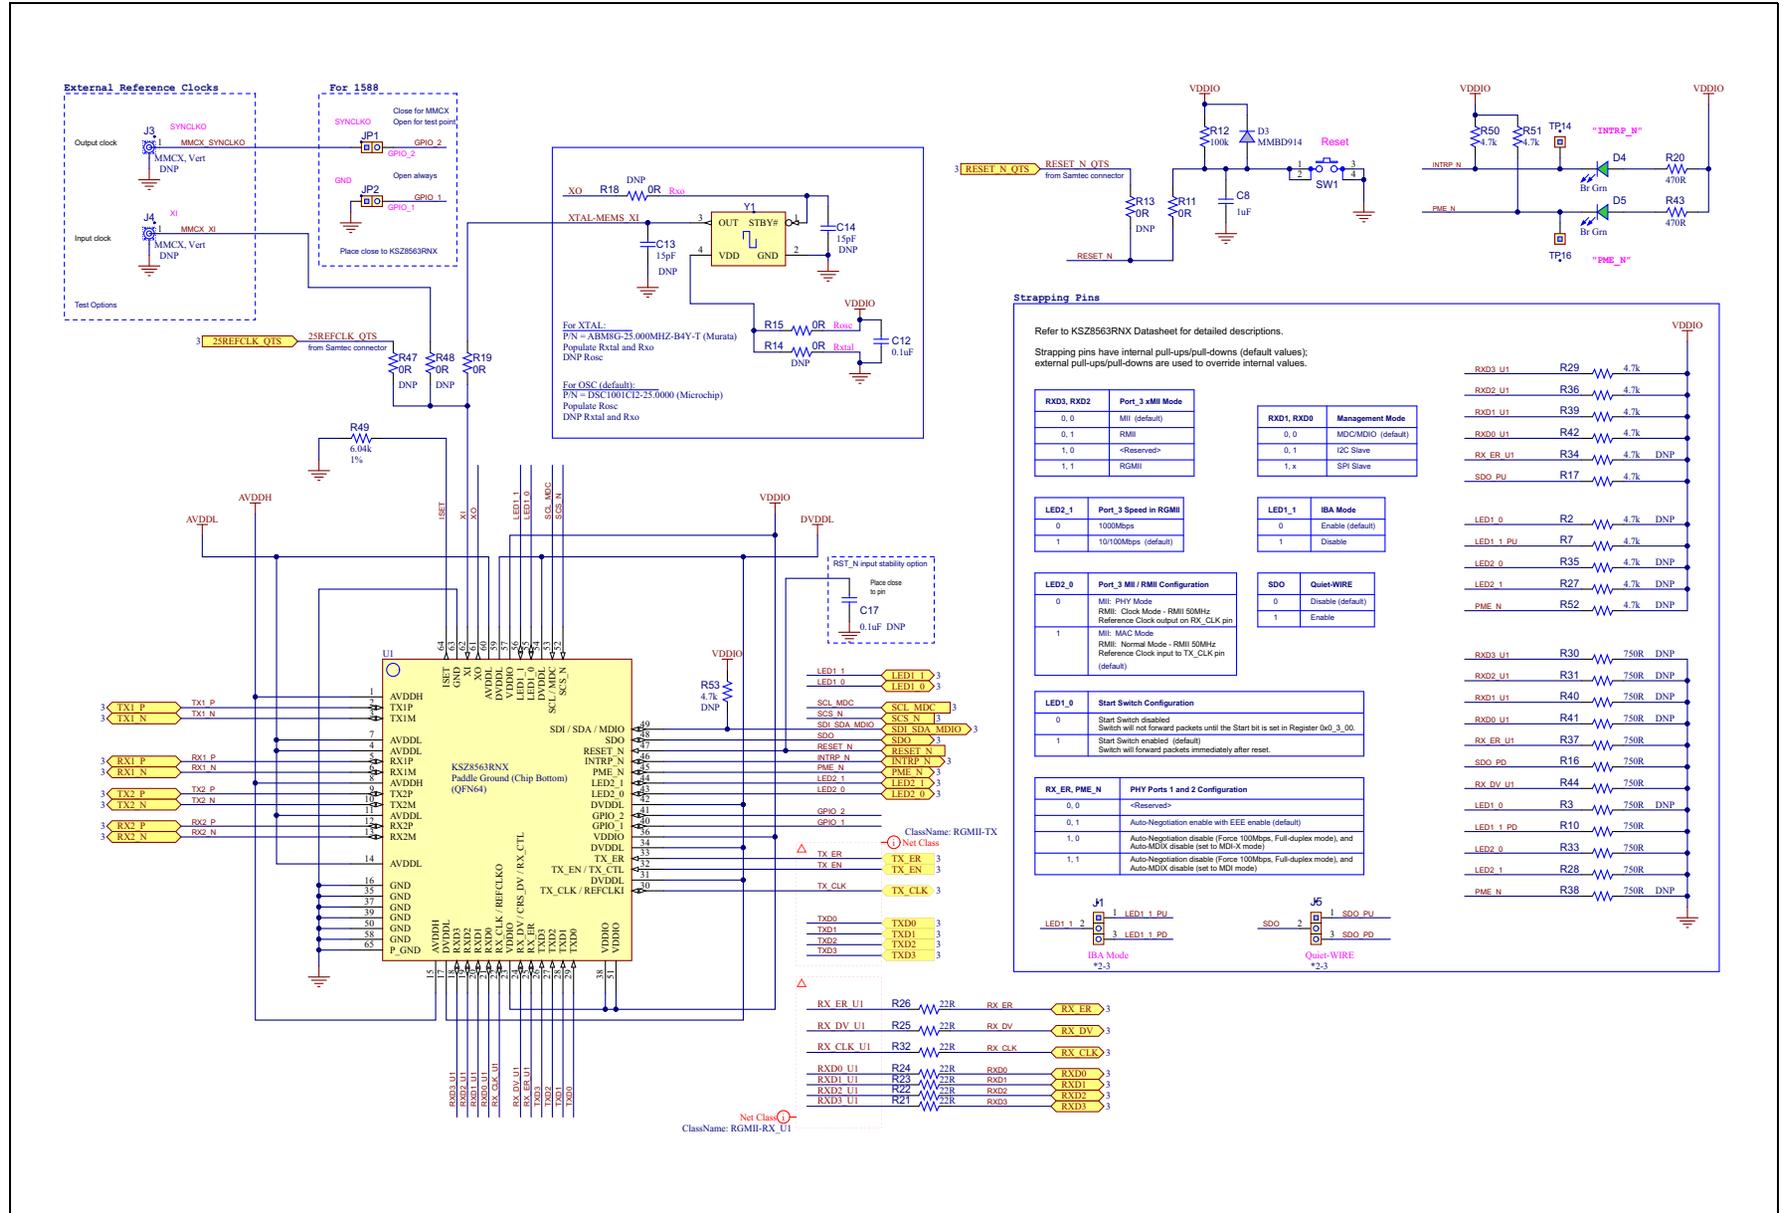

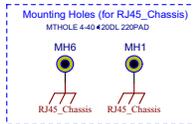

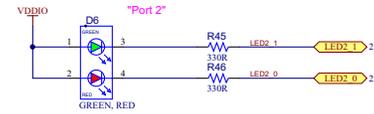

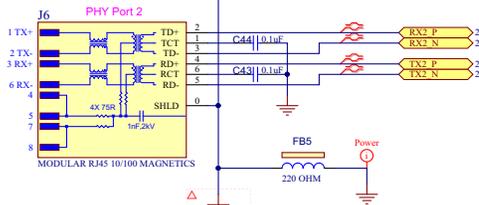

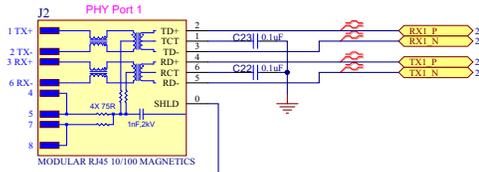

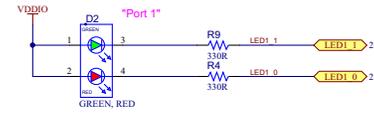

FIGURE B-2: EVB-KSZ8563 SCHEMATICS - PORTS 1, 2 PHYS; PORT 3 MAC - MII/RMII/RGMII CONNECTOR

PCB Layout Constraint:
Match trace lengths between the KSZ8563RNX device and the Samtec connectors for each of the following Class Name groupings:
* RGMII-RX_U1 + QTS-PHY-RX
* RGMII-TX

Tri-color Dual-LED Mode
(power-up default setting)

| Pins (LEDx_1, LEDx_0) | Description | Dual-LED Color |
|-----------------------------------|---|----------------|
| [0, 1] | -Reserved (not used)- | Green |
| [1, 0] [1, toggling] | Solid Color : 100M Link Blinking : Activity (RX, TX) | Red |
| [0, 0] [0, toggling, toggling] | Solid Color : 10M Link Blinking : Activity (RX, TX) | Orange |
| [1, 1] | Link off | <<off>> |

For the xMII pins, Micrel parts naming convention is referenced to the PHY side regardless of whether the switch is in MAC mode or PHY mode. That is, "TX" named pins are inputs and "RX" named pins are outputs for MAC mode and PHY mode.
