APPLICATION SPECIFICATION

iPass+ HD – External Connector

1.0 SCOPE

This specification covers the 0.75mm centerline iPass+ HD (High Density) Single Port Connector for applying and removing the connector to the pc board. The connector is a single one port connector with two card slot openings and is also available in a 1X2 and 1X4 configurations. Twenty-four differential pairs are assigned per port. The connector has 36 contacts per port of which 24 can be assigned to signals and 12 are for ground terminals. The connector is a right angle press-fit compliant mount connector with 0.37mm finished vias for the compliant signal pins.

The connector has compliant pin contacts for mechanical retention to the pc board. The connector provides electromagnetic interference (EMI) suppression with ground fingers that contact the panel and an outer elastomeric EMI gasket that contacts the mating plug. The connector assembly is designed to be inserted through a standard bezel after being seated onto the pc board. See Figure 1 below.

iPass+ HD – External Connector

2.0 PRODUCT DESCRIPTION

The connector consists of housing with double 18-position receptacle ports and with compliant pin contacts on 0.75 centerline spacing. Each port has a card entry slot that accepts a 1.0 ± 0.1 mm thick integrated circuit card housed in the mating plug.

3.0 REFERENCE DOCUMENTS

Refer to the appropriate customer sales drawing for product part numbers.
Refer to PS-76866-001 for the connector product spec.
Refer to AS-76866-001 for the application specification
Refer to EE-76866-002 for Electrical Model

4.0 PC BOARD REQUIREMENTS

4.1 MATERIAL THICKNESS

The pc board material shall be glass epoxy (FR-4 or G-10). The recommended minimum pc board thickness shall be 1.57 mm.

4.2 TOLERANCE

Maximum allowable bow of the pc board shall be 0.08 mm over the length of the connector assembly.

**BOTTOM LAUNCH
DRIVEN VIA
(PREFERRED)**

**TOP LAUNCH
STUB VIA
(WORSE CASE)**

STANDARD VIA CONFIGURATION

BACK DRILLED 1.00MM MAX FROM TOP

Only two annular rings are required for retention of the press-fit via within the printed circuit consequently annular rings on the bottom layer are not needed. Removing the bottom layer annular ring helps minimize the parasitic stub capacitance created by the via.

The anti-pad can be used on other ground layers not shown above. Alternatively, the anti-pad can be made larger with a broader keep-out region on these other ground layers to minimize parasitic capacitance.

For the connector press-fit vias, specify not only the 0.37mm (.014") finished hole size but also the 0.45715mm (.018") drill size for the board fabrication.
