Using EZTEMPR2 Thermocouple

Attach the Thermocouple cable to the Connector marked "SENSE"

This is now ready to use:

Notes:

1. Temperatures are measured to 1 Decimal point
2. Temperature Triggers can be set to whole number values only
3. A hysteresis of -2°C is built into the EZTEXT

Example 1

SET TEMP MAX is set to +30°C

As the actual temperature measured increases, EZTEXT will trigger 'over Temperature' at 30.1°C

As the actual temperature measured decreases EZTEXT will trigger at 27.9°C

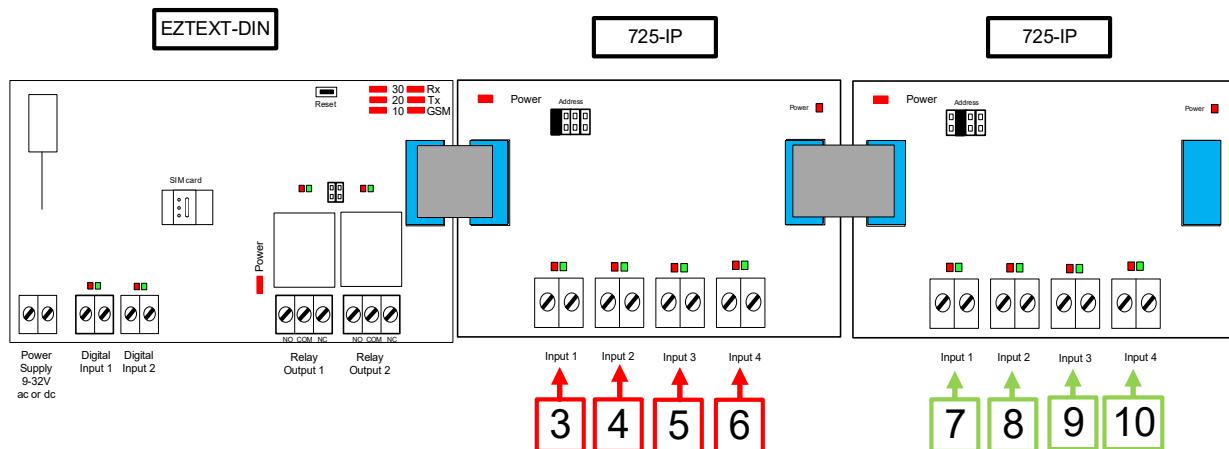

Example 2

SET TEMP MIN is set to +10°C

As the actual temperature measured decreases, EZTEXT will trigger 'under Temperature' at 9.9°C

As the actual temperature measured increases EZTEXT will trigger 'Good' at 12.1°C

Using Additional Input / Output Modules

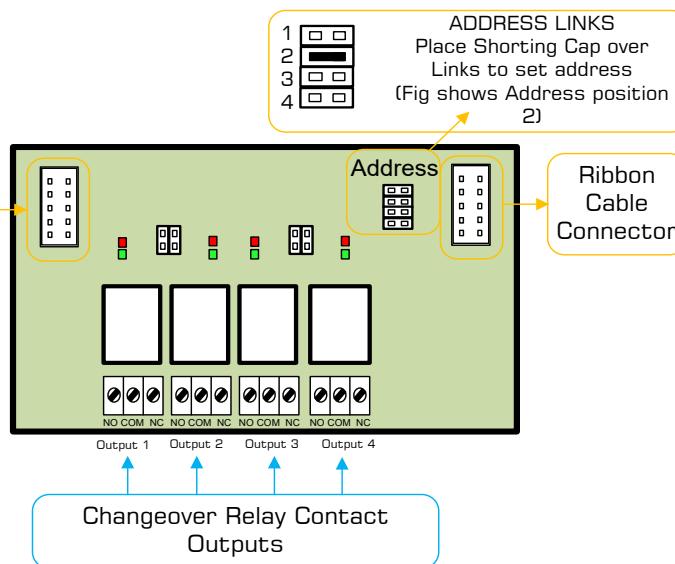

Input and Output modules can be added in any order by connecting with the Ribbon cables supplied.

On initial Powerup EZTEXT automatically interrogates and configures additional modules. (all LEDS Flash). After approx. 60seconds the LEDs stop flashing to indicate the module is ready to use

Notes:

1. Any combinations of 725-IP and 725-OP modules can be added, the Maximum is four, 725-IP Modules and four 725-OP modules in the 'Daisy Chan' link (8 modules in total)
2. When using 725-IP / OP modules there are some limitations (compared with the two input and outputs on the ETEXT-DIN)

725-OP Additional 4 Outputs Module

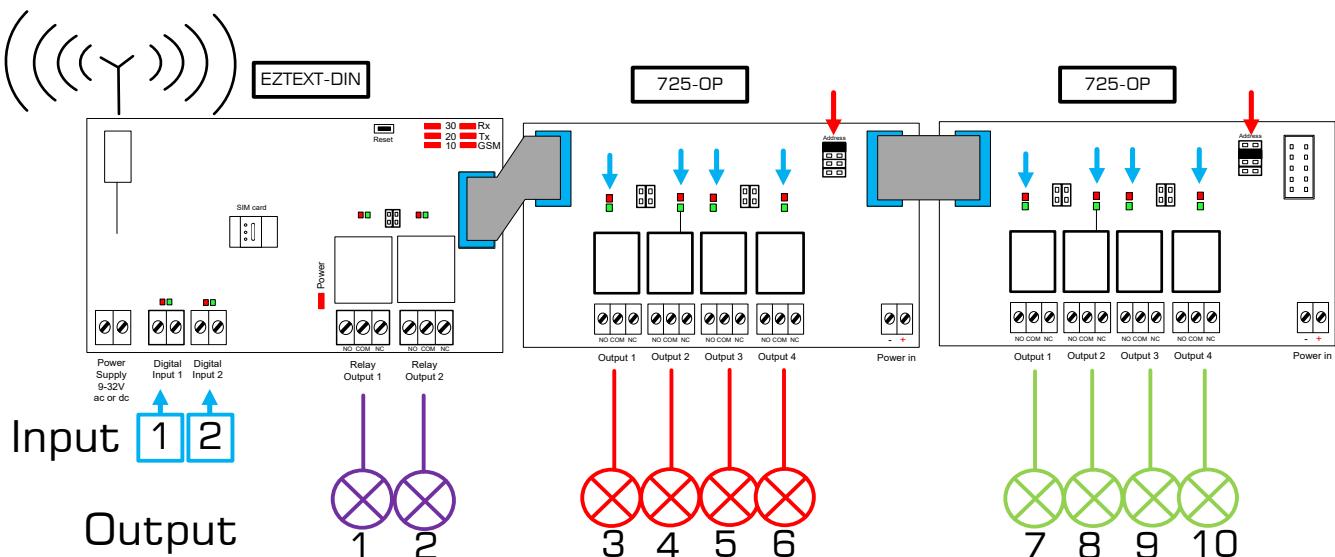

- Each 725-OP module must have a different address Link setting to other 725-OP modules

(For the application shown address Link 2 is fitted this sets the outputs to be numbers 7-10)

- Each Relay Changeover contacts Output can only be switched "On" or "Off".
- Functions such as time delays cannot be used.
- A single telephone OPNUM number applies per output

Example: the number allocated to an output board that you would use to send a text message to activate an output.

Insert SIM Card

Please note:

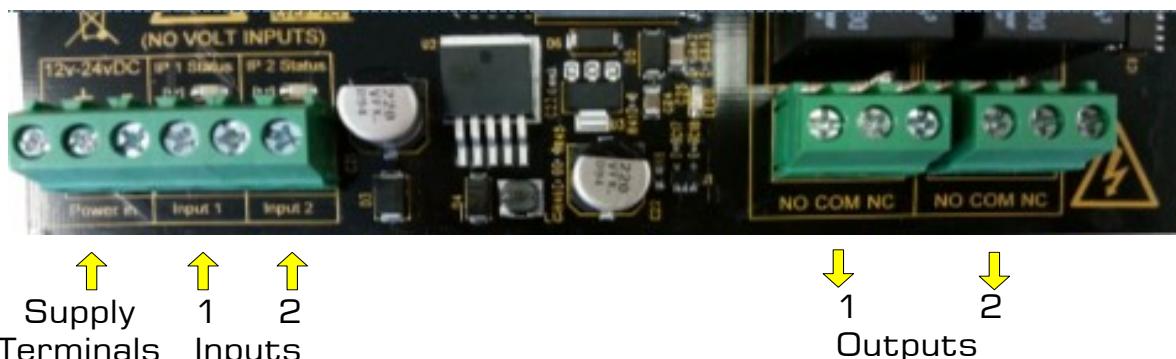

- Insert NANO SIM Card before applying power (standard 3 Volt SIM only).
- The message memory of the SIM card should be clear before it is fitted.
- Ensure that the SIM card has not been PIN code protected!
- Beware of Pay-as-you-go SIM which require regular top-up to remain active.
- It is recommended to bar Incoming voice calls to the SIM card to avoid error messages being sent back to the user. This can be achieved with the service provider.

The SIM card should be inserted into EZTEXT-DIN before applying power

- RF Solutions recommends O2 and Vodafone SIM card and has carried out extensive testing using the SIM cards we have for these two networks.
- No guarantee can be given for the operation of this product with any network except those that have been tested by RF Solutions.
