

ABC200 Series

AC-DC Open Frame Power Supplies

ABC200 Series is a family of compact and efficient AC-DC power supplies suited for telecom datacom and many other industrial applications.

This family meets the international information technology safety standards with the CE-Mark for the European Low Voltage Directive (LVD).

Their high efficiency allows a very minimal power loss in end equipment, resulting in higher reliability, ease of thermal management and regulatory approvals for an environmentally friendly end product.

Key Features & Benefits

- High Efficiency up to 91% at 230 VAC
- Universal AC Input Voltage Range: 90-264 VAC
- Active Power Factor Correction
- Over temperature, output overvoltage, overcurrent and short circuit protection
- EMC Standard according to EN 55032
- Safety approved to the latest edition of the following standards: CSA/UL 60950-1, EN/IEC 62368-1
- High Power Density Design: 15 W/in³
- Compact Size: 2.0 (W) x 4.0 (L) x 1.5 (H) inches
- RoHS Compliant
- CE Marked

Applications

- Industrial Applications
- Telecom
- Datacom

1. MODEL SELECTION

| MODEL | INPUT VOLTAGE | OUTPUT VOLTAGE | NOM OUTPUT CURRENT | # OF OUTPUTS | OUTPUT POWER |
|--------------|---------------|----------------|--------------------|--------------|--------------|
| ABC200-1012G | 90 – 264 VAC | 12 VDC | 15 A | 1 | 200 W |
| ABC200-1024G | 90 – 264 VAC | 24 VDC | 8.5 A | 1 | 200 W |
| ABC200-1048G | 90 – 264 VAC | 48 VDC | 4.2 A | 1 | 200 W |

2. OVERVIEW

The ABC200-10XXG is a high efficiency and high power With 1 m/s system air cooling, the ABC200-1012G can density AC to DC power supply. It incorporates boundary deliver up to 180 W continuous output power, and 204W for conduction mode (BCM) PFC converter and soft-switching ABC200-1024G and the ABC200-1048G. LLC converter, providing increased system reliability and high efficiency.

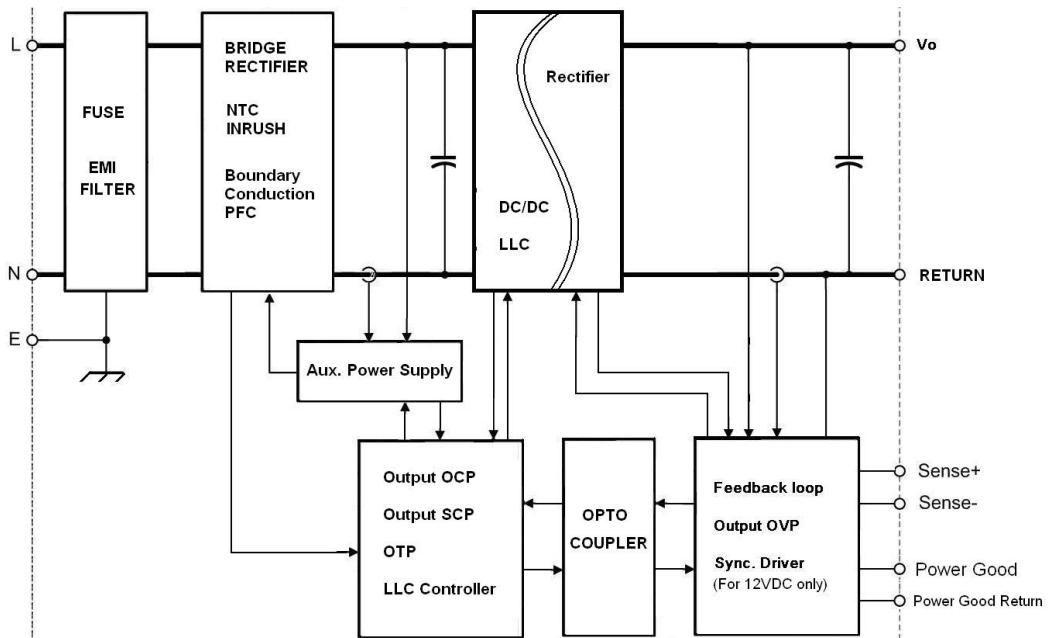

Figure 1. ABC200-10XXG block diagram

3. ABSOLUTE MAXIMUM RATINGS

Stresses in excess of the absolute maximum ratings may cause performance degradation, adversely affect long-term reliability, and cause permanent damage to the supply.

| PARAMETER | CONDITIONS / DESCRIPTION | MIN | NOM | MAX | UNIT |
|---------------|--|-----|-----|------------|------------|
| $V_{i\max c}$ | Max Continuous Input Continuous Transient, 60 ms | | | 264 300 | VAC VAC |

4. INPUT SPECIFICATIONS

General Condition: $T_A = -10 \dots 50^\circ\text{C}$ unless otherwise noted. Active fan air cooling required: 200 LFM (1 m/s)

| PARAMETER | CONDITIONS / DESCRIPTION | MIN | NOM | MAX | UNIT | |
|-------------------|-------------------------------------|--|-----|----------|------------------|-----|
| $V_{i\text{nom}}$ | Nominal Input Voltage | 100 | 240 | 240 | VAC | |
| V_i | Input Voltage Ranges | Normal operating ($V_{i\text{min}}$ to $V_{i\text{max}}$) | 90 | 264 | VAC | |
| $I_{i\text{max}}$ | Max Input Current | At 90 VAC input and max rating | | 2.75 | A _{rms} | |
| I_p | Inrush Current Limitation | $V_{i\text{nom}} = 115 \text{ VAC}, T = 25^\circ\text{C}$ (see Figure 2) $V_{i\text{nom}} = 230 \text{ VAC}, T = 25^\circ\text{C}$ (see Figure 3) | | 40 80 | A _p | |
| f_i | Input Frequency | | 47 | 50/60 | Hz | |
| PF | Power Factor | Normal input, half load and above | 0.9 | | | |
| $V_{i\text{on}}$ | Turn-On Input Voltage ¹ | Ramping up | 85 | 87 | 90 | VAC |
| $V_{i\text{off}}$ | Turn-Off Input Voltage ¹ | Ramping down | 80 | 83 | 85 | VAC |
| η | Efficiency | $V_{i\text{nom}} = 230 \text{ VAC}, 0.5 \cdot I_{i\text{nom}}, V_{o\text{nom}}, T_A = 25^\circ\text{C}$ $V_{i\text{nom}} = 230 \text{ VAC}, 1.0 \cdot I_{i\text{nom}}, V_{o\text{nom}}, T_A = 25^\circ\text{C}$ | | 89 91 | % | |
| T_{hold} | Hold-Up Time | After last AC zero point, V_o within regulation, $V_i = 115 \text{ VAC}, P_{o\text{nom}}$ | 10 | | ms | |

1) The power supply is provided with the hysteresis loop (about 4.5V) during turn-on and turn-off within the ranges.

4.1 INPUT FUSE

A slow-blow 5A input fuse (5 × 20 mm) in series with live line inside the power supply protects against severe defects. The fuse and a VDR form together with the input filter an effective protection against high input transients.

4.2 INRUSH CURRENT

The AC-DC power supply exhibits an X-capacitance of only about 1.0 μF , resulting in a low and short peak current, when the supply is connected to the mains. The internal bulk capacitor will be charged through a NTC resistor which will limit the inrush current (see Figure 2 and 3).

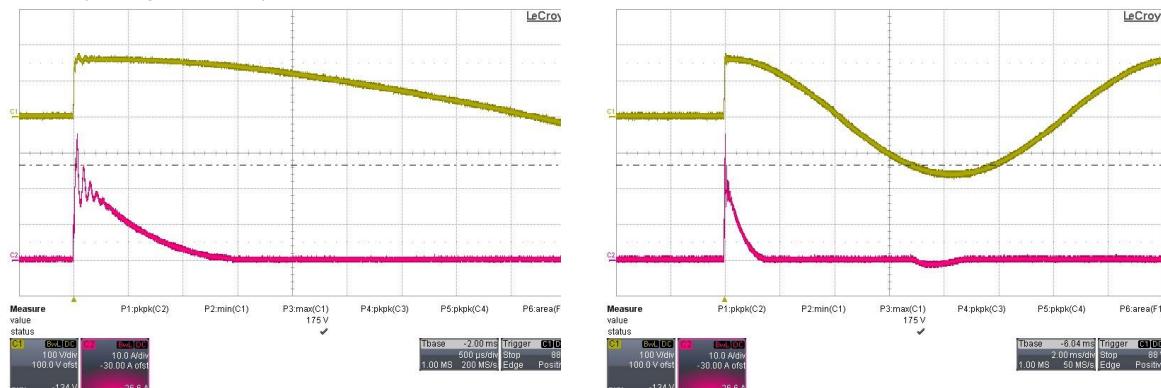

Figure 2. Inrush current, $V_{in} = 115 \text{ Vac}$, 90° CH1: V_{in} (100V/div), CH2: I_{in} (10A/div)

¹ The power supply is provided with the hysteresis loop (about 4.5V) during turn-on and turn-off within the ranges.

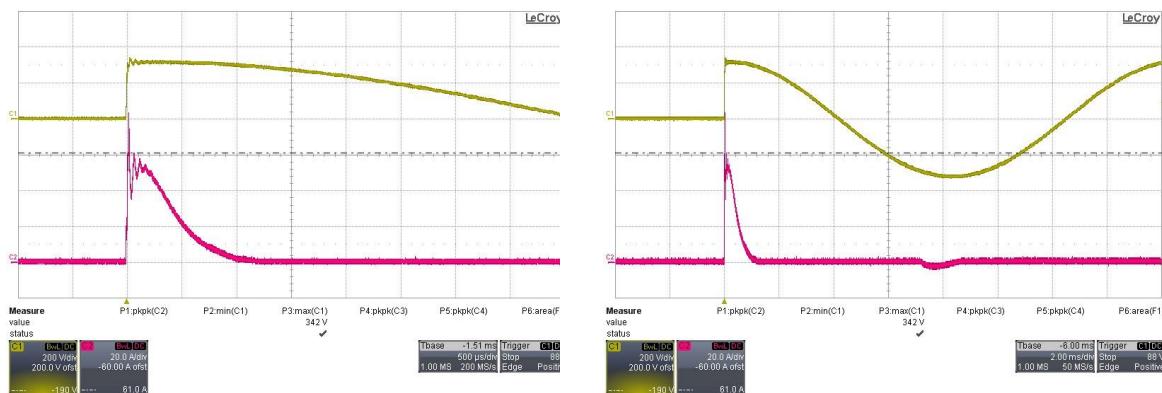

Figure 3. Inrush current, $V_{in} = 230\text{ Vac}$, 90° CH1: V_{in} (200V/div), CH2: I_{in} (20A/div)

4.3 INPUT UNDER-VOLTAGE

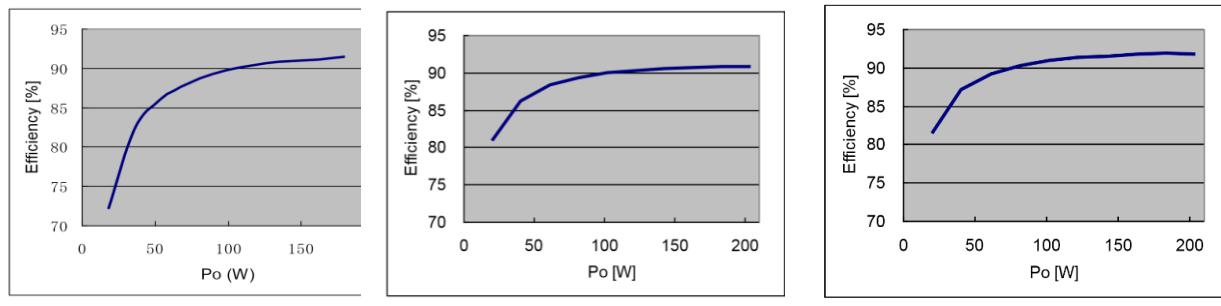

If the sinusoidal input voltage stays below the input under voltage lockout threshold V_{on} , the supply will be inhibited. Once the input voltage returns within the normal operating range, the supply will return to normal operation again.

4.4 POWER FACTOR CORRECTION

Power factor correction (PFC) is achieved by controlling the input current waveform synchronously with the input voltage. A specified PFC controller is implemented in the boundary conduction mode topology giving outstanding PFC results over a wide input voltage and load ranges. The input current will follow the shape of the input voltage.

4.5 EFFICIENCY

The high efficiency (see Figure 4) is achieved by using soft switching LLC technology with boundary conduction mode PFC topology minimizing switching losses. Synchronous rectifiers on the output reduce the losses in the high current. A Schottky or ultra fast diode is used as the rectifier in the output path for ABC200-1012G, ABC200-1024G and ABC200-1048G because of the high output voltage level.

| T_{SD} | Over Temperature on Heat Sinks | Automatic shut-down, automatic recovery after cool down. | 105 | | °C | |

7.1 OVERVOLTAGE PROTECTION

The AC-DC power supply provides a fixed threshold overvoltage (OV) protection implemented with a HW comparator. Once an OV condition has been triggered, the supply will shut down and latch the fault condition. The latch can be unlocked by disconnecting the supply from the AC mains only.

7.2 CURRENT LIMITATION

The main output current limitation will decrease with linear derating to 50% at 70 °C if the ambient (inlet) temperature increases beyond 50 °C (see Figure 13).

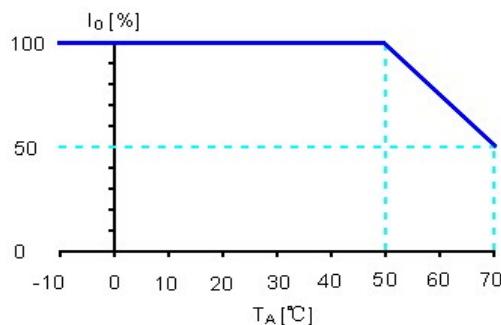

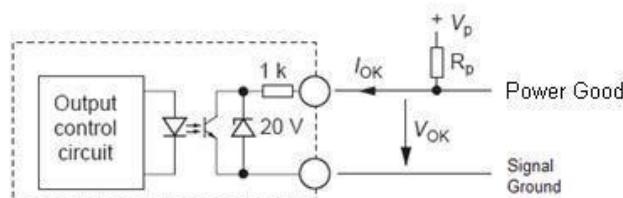

Figure 13. Output Current Capacity Derating

8 POWER GOOD SIGNAL

The Out-OK output gives a status indication of the converter and the output voltages. It can be used for control functions such as data protection, central system monitoring or as a part of a self-testing system. Connecting the Out-OK as shown in Figure 14, V_{OK} < 1.0 V indicates the output voltage(s) of the converter are within the range.

Note: Using the potentiometer, the monitor level tracks the programmed output voltage. In an error condition, if the output voltage is out of range due to overload or an external over voltage, V_{OK} will approach V_p. The output is *Figure 14: Power Good signal* formed by an NPN transistor. The signal is isolated from the output.

O/P V_{OK} - Signal Low, Opto conducting, (max sink current 0.5 mA)

O/P V Bad - Signal High, Opto open, (max leakage current 25 uA)

Figure 14. Power Good signal

9 ELECTROMAGNETIC COMPATIBILITY

9.1 IMMUNITY

NOTE: Most of the immunity requirements are derived from EN 55024: 2010.

| TEST | STANDARD / DESCRIPTION | CRITERIA |
|--------------------------------|------------------------|----------|
| ESD Contact Discharge | EN 61000-4-2, Level 2 | A |
| RF Susceptibility | EN 61000-4-3, Level 3 | A |
| Fast Transient/Burst | EN 61000-4-4, Level 3 | B |
| Surge | EN 61000-4-5, Class 3 | B |
| RF Conducted Immunity | EN 61000-4-6, Class 3 | A |
| Voltage Dips and Interruptions | EN 61000-4-11 | C |
| Magnetic Fields | EN 61000-4-8, Level 3 | A |

9.2 EMISSION

| TEST | STANDARD / DESCRIPTION | CRITERIA |
|---------------------------------|---|----------|
| Conducted Emission | EN 55032 / CISPR 22: 0.15 ... 30 MHz, QP and AVG, single unit | Class A |
| Radiated Emission | EN 55032 / CISPR 22: 30 MHz ... 1 GHz, QP, single unit | Class A |
| Harmonic Emissions | IEC 61000-3-2, Vin = 100 VAC/ 60 Hz, 100% Load | Class A |
| | IEC 61000-3-2, Vin = 240 VAC/ 50 Hz, 100% Load | Class A |
| Voltage Fluctuation and Flicker | EN 61000-3-3 | PASS |

10 SAFETY SPECIFICATIONS

Maximum electric strength testing is performed in the factory according to IEC/EN 62368-1, and UL 60950. Input-to-output electric strength tests should not be repeated in the field. Bel Power Solutions will not honor any warranty claims resulting from electric strength field tests.

| PARAMETER | DESCRIPTION / CONDITIONS | MIN | NOM | MAX | UNIT |
|----------------------------|--|-----|------|------------------------------|------|
