

LC75890W

1/4-Duty and Static Drive General-Purpose LCD Driver

ON Semiconductor®

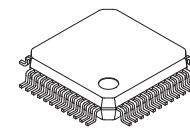

www.onsemi.com

Overview

The LC75890W is the 1/4 duty and static drive general-purpose LCD display driver that can be used for displaying segments for household appliances, home audio visual products, portable devices and other such products under the control of a microcontroller. The LC75890W can drive up to 148 segments directly. In addition the LC75890W can control up to 12 general-purpose output ports. They can control the brightness of the LED backlight of RGB, because they have the PWM output of greatest 3CH built-in. Incorporation of the oscillation circuit helps to reduce the number of external resistors and capacitors required. Incorporation of the LCD drive bias voltage stabilization circuit helps to reduce the capacitors for the LCD drive bias voltage stabilization.

Features

- Support for 1/4-duty 1/3-bias or static drive techniques under serial data control.
 - When 1/4-duty drive : Capable of driving up to 148 segments
 - When Static drive : Capable of driving up to 37 segments
- Support for display segment on, off, or blinking for each segment output pin under serial data control.
- Serial data control of the power-saving mode based backup function and the all segments forced off function.
- Serial data control of switching between the segment output port and general-purpose output port function.
 - < Support for up to 12 general-purpose output ports >
- Support for the PWM output function of a maximum of 3 ch.
(It can output from the general-purpose output port).
- Serial data control of the frame frequency of the common and segment output waveforms.
- Serial data control of the segment blinking frequency.
- Serial data control of switching between the internal oscillator operating mode and external clock operating mode.
- Serial data input supports CCB* format communication with the system controller.
- Independent VLCD for the LCD driver block.
- Built-in LCD drive bias voltage stabilization circuit.
- The INH pin allows the display to be forced to the off state.
- Incorporation of an oscillator circuit.
(Incorporation of resistor and capacitor for an oscillation)

SPQFP48 7x7 / SQFP48

* Computer Control Bus (CCB) is an ON Semiconductor's original bus format and the bus addresses are controlled by ON Semiconductor.

ORDERING INFORMATION

See detailed ordering and shipping information on page 29 of this data sheet.

LC75890W

Specifications

Absolute Maximum Ratings at $T_a = 25^\circ\text{C}$, $V_{SS} = 0 \text{ V}$

| Parameter | Symbol | Conditions | Ratings | Unit |
|-----------------------------|---------------|--------------------------------------|-----------------------|------------------|
| Maximum supply voltage | V_{DD} max | V_{DD} | -0.3 to +4.2 | V |
| | V_{LCD} max | V_{LCD} | -0.3 to +6.5 | |
| Input voltage | V_{IN1} | CE, CL, DI, \overline{INH} | -0.3 to +4.2 | V |
| | V_{IN2} | OSCI : External clock operating mode | -0.3 to $V_{DD}+0.3$ | |
| Output voltage | V_{OUT} | S1 to S37, COM1 to COM4, P1 to P12 | -0.3 to $V_{LCD}+0.3$ | V |
| Output current | I_{OUT1} | S1 to S36 | 300 | μA |
| | I_{OUT2} | COM1 to COM4, S37 | 3 | mA |
| | I_{OUT3} | P1 to P12 *1 | 5 | |
| Allowable power dissipation | P_d max | $T_a = 85^\circ\text{C}$ | 100 | mW |
| Operating temperature | T_{opr} | | -40 to +85 | $^\circ\text{C}$ |
| Storage temperature | T_{stg} | | -55 to +125 | $^\circ\text{C}$ |

Note : *1 The sum of output current through P1 to P12 must be 40 mA or less.

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

Allowable Operating Ranges at $T_a = -40$ to $+85^\circ\text{C}$, $V_{SS} = 0 \text{ V}$

| Parameter | Symbol | Conditions | Ratings | | | Unit |
|------------------------------------|-----------|---|--------------|-----|--------------|---------------|
| | | | min | typ | max | |
| Supply voltage | V_{DD} | V_{DD} | 2.7 | | 3.6 | V |
| | V_{LCD} | V_{LCD} : Internal oscillator operating mode | 2.7 | | 5.5 | |
| | | V_{LCD} : External clock operating mode | V_{DD} | | 5.5 | |
| Input high-level voltage | V_{IH1} | CE, CL, DI, \overline{INH} | 0.7 V_{DD} | | 3.6 | V |
| | V_{IH2} | OSCI: External clock operating mode | 0.7 V_{DD} | | V_{DD} | |
| Input low-level voltage | V_{IL1} | CE, CL, DI, \overline{INH} | 0 | | 0.2 V_{DD} | V |
| | V_{IL2} | OSCI: External clock operating mode | 0 | | 0.2 V_{DD} | |
| External clock operating frequency | f_{CK} | OSCI: External clock operating mode [Figure 3] | 10 | 38 | 600 | kHz |
| External clock duty cycle | D_{CK} | OSCI: External clock operating mode [Figure 3] | 30 | 50 | 70 | % |
| Data setup time | t_{DS} | CL, DI [Figure 1], [Figure 2] | 160 | | | ns |
| Data hold time | t_{DH} | CL, DI [Figure 1], [Figure 2] | 160 | | | ns |
| CE wait time | t_{CP} | CE, CL [Figure 1], [Figure 2] | 160 | | | ns |
| CE setup time | t_{CS} | CE, CL [Figure 1], [Figure 2] | 160 | | | ns |
| CE hold time | t_{CH} | CE, CL [Figure 1], [Figure 2] | 160 | | | ns |
| High-level clock pulse width | t_{PH} | CL [Figure 1], [Figure 2] | 160 | | | ns |
| Low-level clock pulse width | t_{PL} | CL [Figure 1], [Figure 2] | 160 | | | ns |
| Rise time | t_{R} | CE, CL, DI [Figure 1], [Figure 2] | | 160 | | ns |
| Fall time | t_{F} | CE, CL, DI [Figure 1], [Figure 2] | | 160 | | ns |
| \overline{INH} switching time | t_{C} | \overline{INH} [Figure 4], [Figure 5] | 10 | | | μs |

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

LC75890W

Electrical Characteristics for the Allowable Operating Ranges

| Parameter | Symbol | Pin | Conditions | Ratings | | | Unit |

Serial Data Input

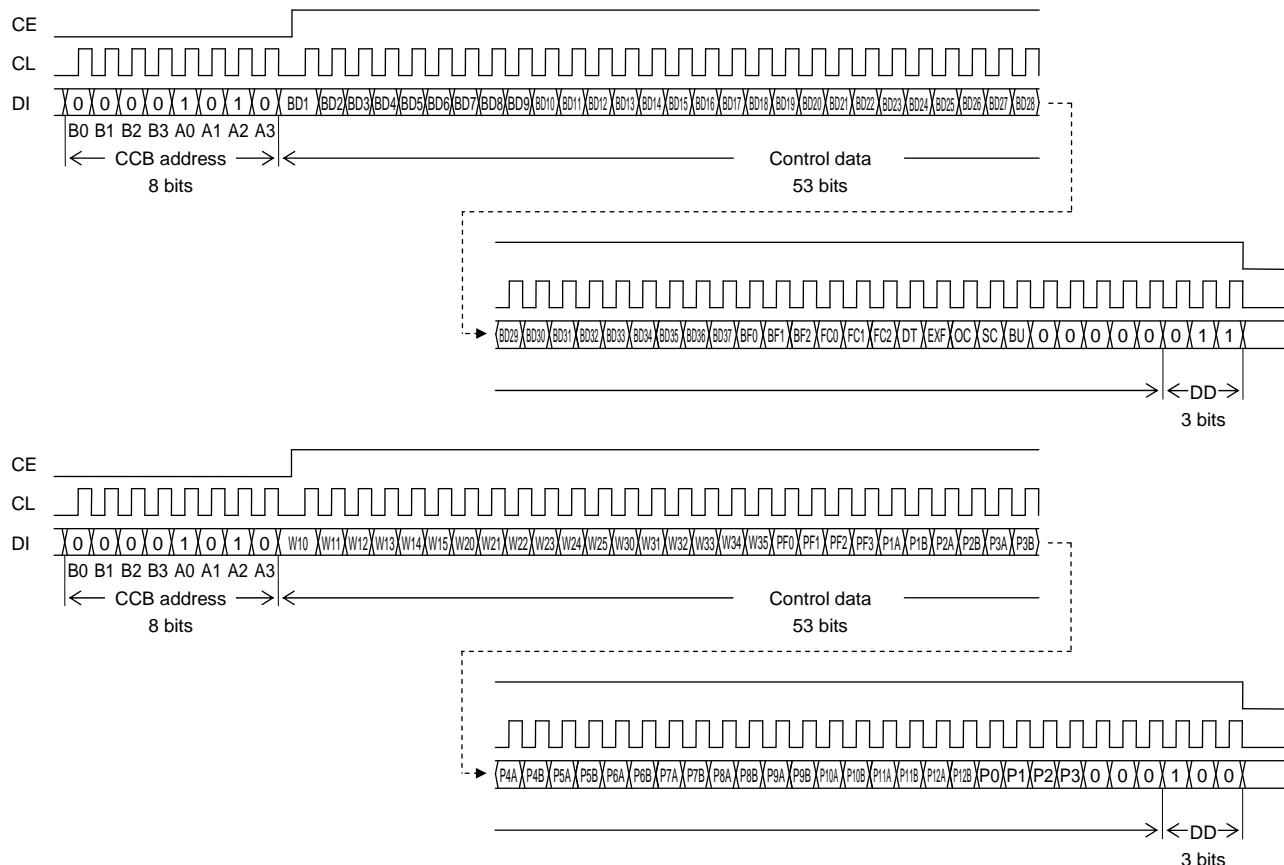

1. 1/4 duty drive

(1) When CL is stopped at the low level

- Display data Input

- Control data Input

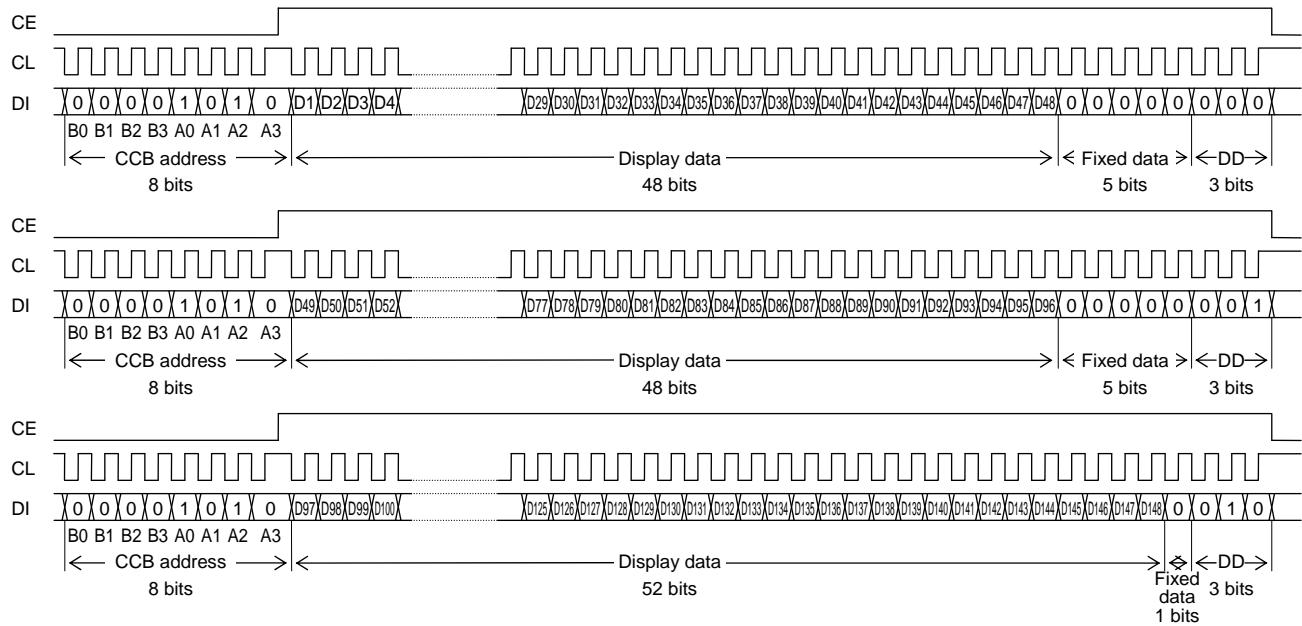

Note: DD is the direction data.

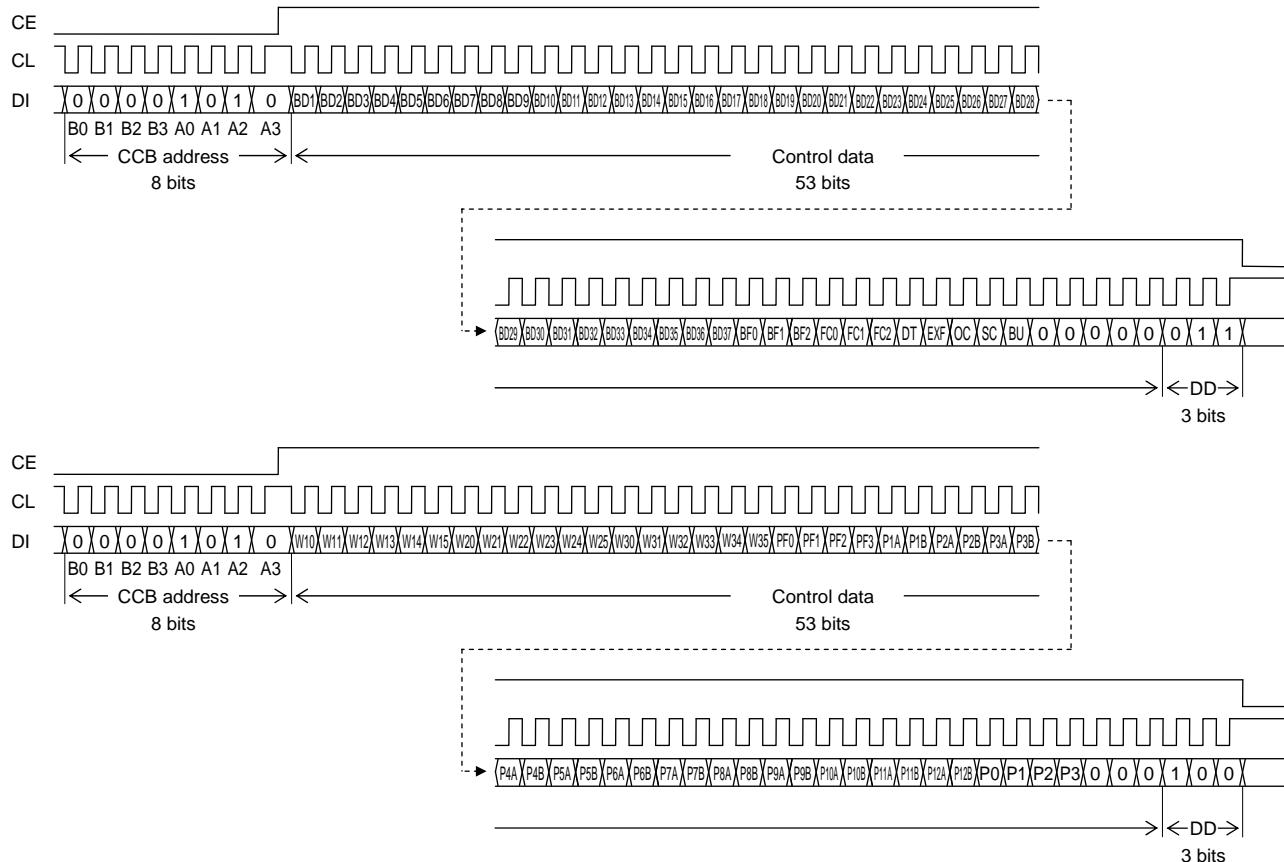

LC75890W

(2) When CL is stopped at the high level

- Display data Input

- Control data Input

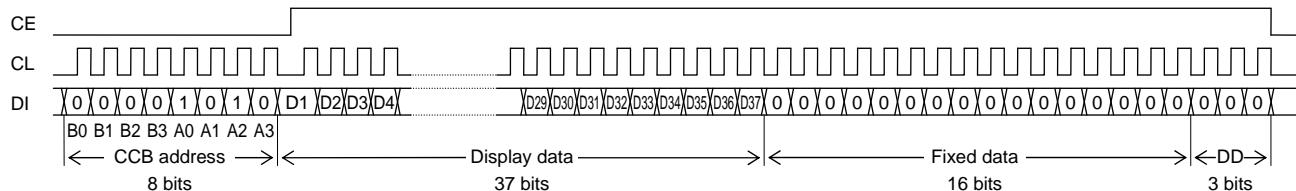

Note: DD is the direction data.

- CCB address “50H”
 - D1 to D148 Display data
 - BD1 to BD37 Display blinking control data of each segment output pin
 - BF0 to BF2 Segment blinking frequency setting control data
 - FC0 to FC2 Common/segment output waveform frame frequency setting control data
 - DT 1/4-duty 1/3-bias drive or static drive switching control data
 - EXF External clock operating frequency setting control data
 - OC Internal oscillator operating mode/external clock operating mode switching control data
 - SC Segment on/off control data
 - BU Normal mode/power-saving mode control data
 - W10 to W15, W20 to W25,... W30 to W35 PWM data of the PWM output
 - PF0 to PF3 PWM output waveform frame frequency setting control data
 - P1A, P1B to P12A, P12B General-purpose output function/PWM output function switching control data of the general-purpose output port
 - P0 to P3 Segment output port/general-purpose output port switching control data

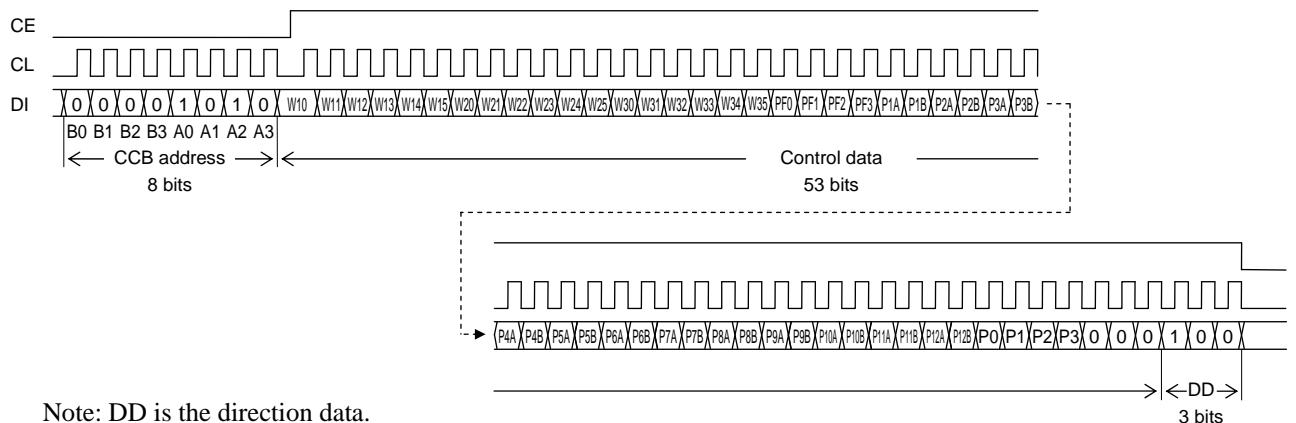

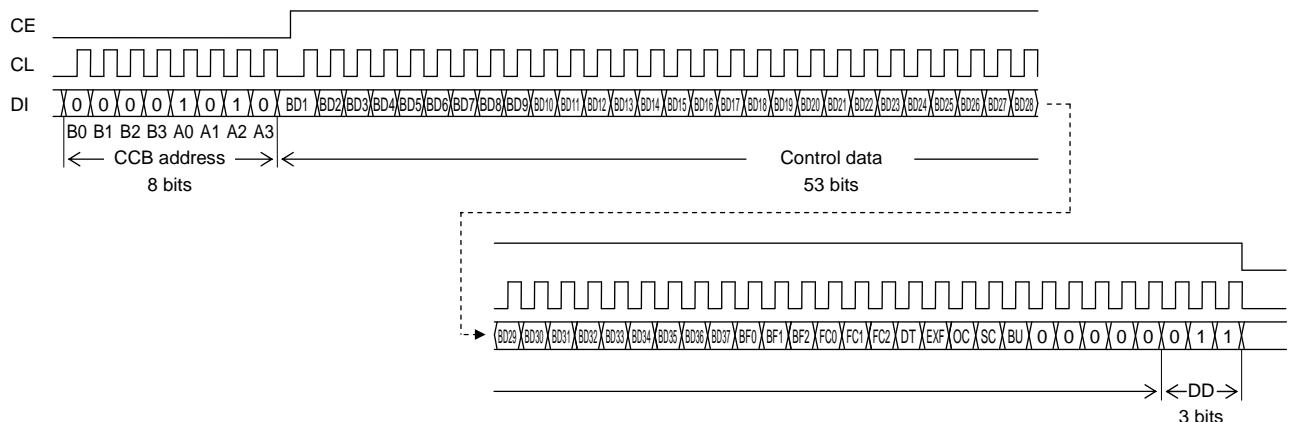

2. Static drive

(1) When CL is stopped at the low level

- Display data Input

- Control data Input

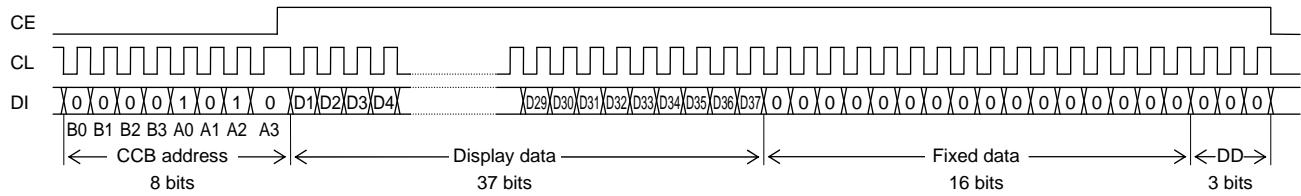

Note: DD is the direction data.

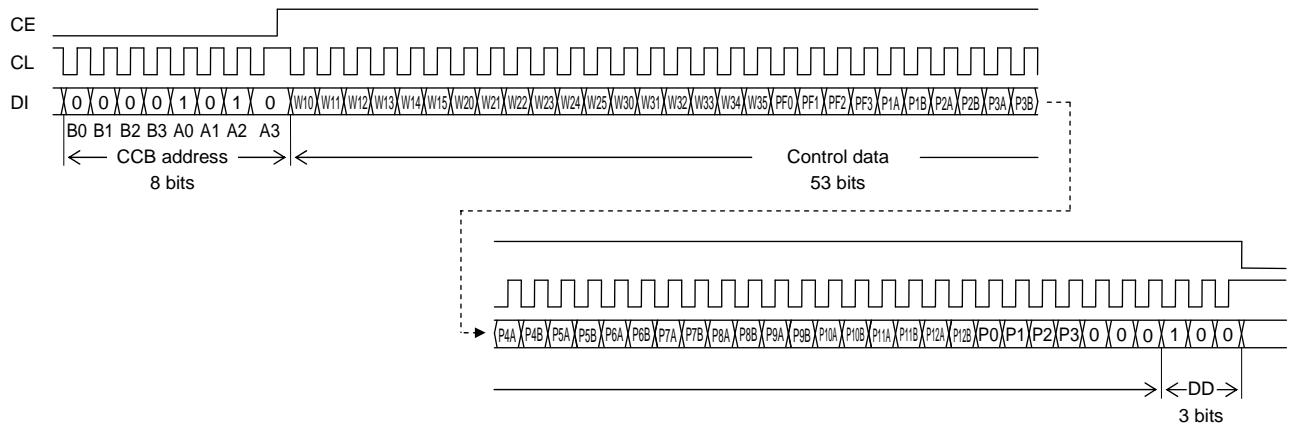

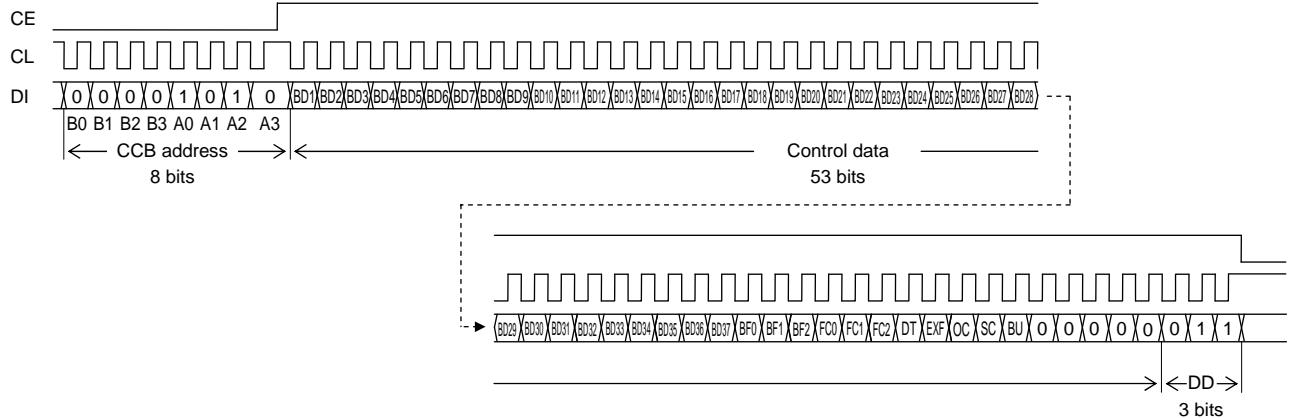

LC75890W

(2) When CL is stopped at the high level

- Display data Input

- Control data Input

Note: DD is the direction data.

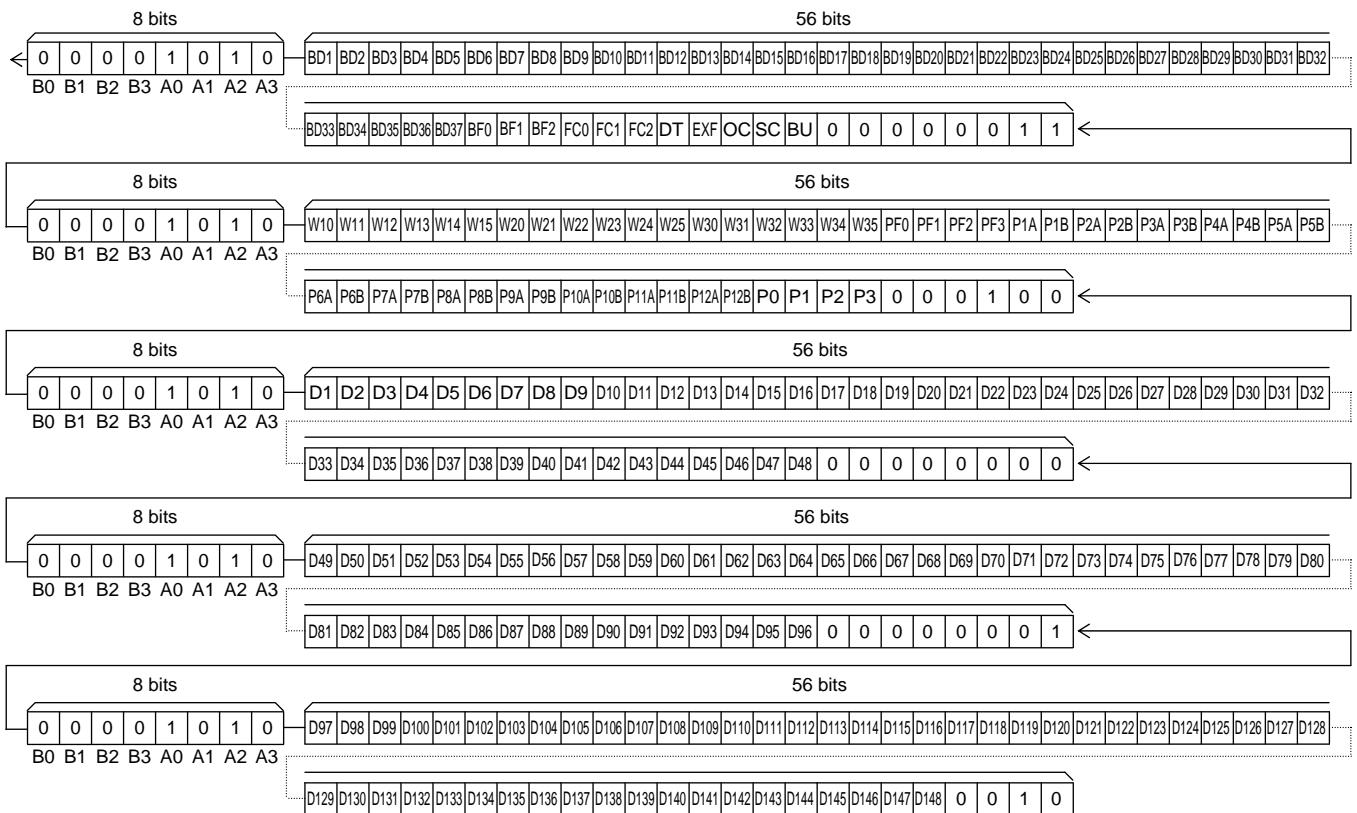

- CCB address “50H”
- D1 to D37 Display data
- BD1 to BD37 Display blinking control data of each segment output pin
- BF0 to BF2 Segment blinking frequency setting control data
- FC0 to FC2 Common/segment output waveform frame frequency setting control data
- DT 1/4-duty 1/3-bias drive or static drive switching control data
- EXF External clock operating frequency setting control data
- OC Internal oscillator operating mode/external clock operating mode switching control data
- SC Segment on/off control data
- BU Normal mode/power-saving mode control data
- W10 to W15, W20 to W25,... PWM data of the PWM output
W30 to W35
- PF0 to PF3 PWM output waveform frame frequency setting control data
- P1A, P1B to P12A, P12B General-purpose output function/PWM output function switching control data of the general-purpose output port
- P0 to P3 Segment output port/general-purpose output port switching control data

Serial Data Transfer Example

1. 1/4 duty drive

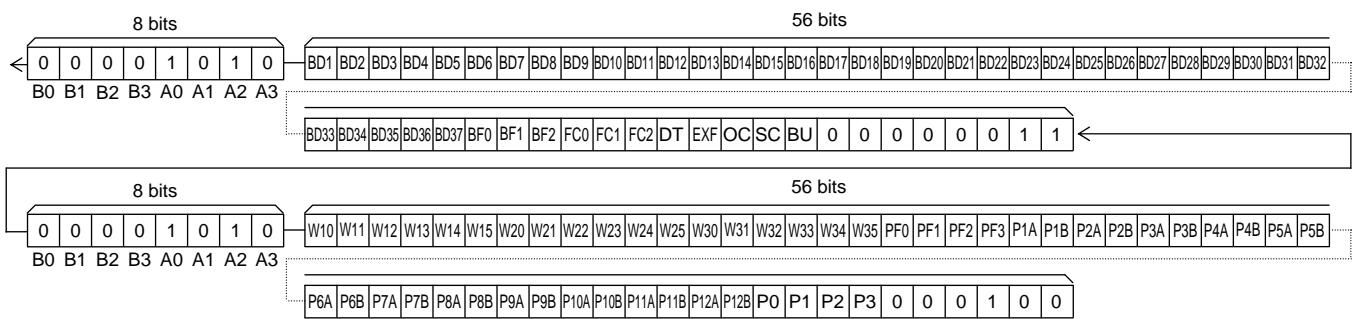

- When 97 or more segments are used

All 320 bits of serial data (including CCB address) must be sent.

- When fewer than 97 segments are used

Depending on the number of segments used, 192 bits or 256 bits (including CCB address) must be sent as serial data. However, the serial data (control data) shown in the figure below must be sent without fail.

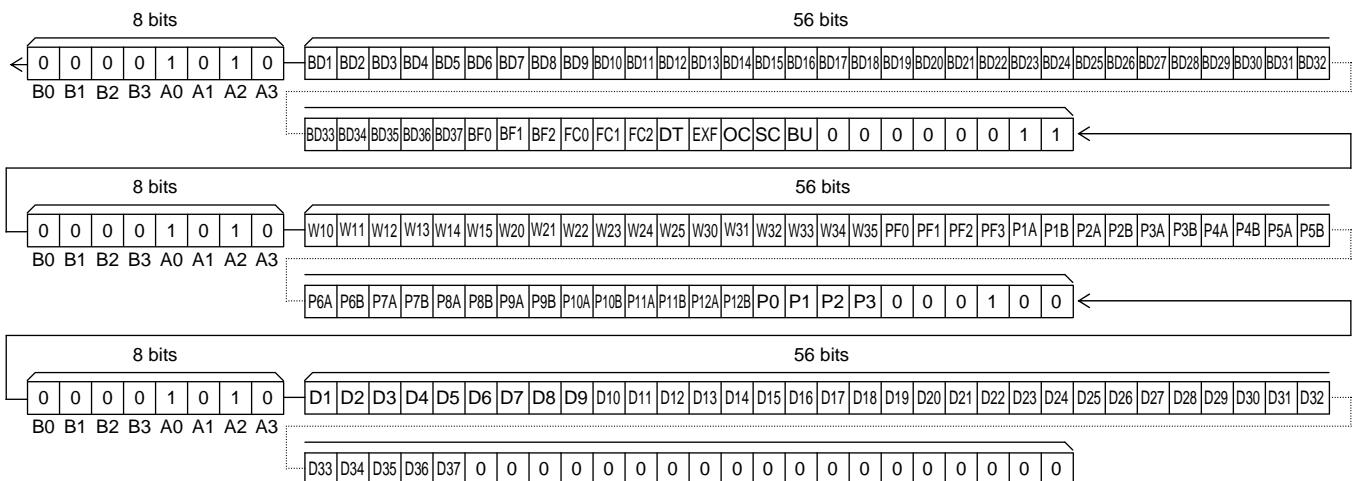

Note : After the above serial data is sent, the contents of the display data can be changed by transferring only the serial data (CCB address, display data, fixed data, and direction data) including the display data to be changed in 64-bit units.

LC75890W

2. Static drive

- All 192 bits of serial data (including CCB address) must be sent.

Control Data Functions

(1) BD1 to BD37 ... Display blinking control data of each segment output pin

These control data bits are used to set the display segment blinking corresponding to each segment output pin.

| BDn | Display segment blinking states of segment output pin Sn |
|-----|--|
| 0 | The display segments are not blinked. |
| 1 | The display segments corresponding to the segment output pin Sn that the contents of display data are "1" are blinked. |

Note: The BDn (n=1 to 37) are the control data setting the blinking state of the display segments for segment output pins Sn (n=1 to 37).

For example, the display state of segment output pin S21 becomes as follows when the contents of display data are (D81, D82, D83, D84) = (1, 0, 1, 0) in 1/4 duty drive

| BD21 | Display data | | | | Display states of segment output pin S21 | | | |
|------|--------------|-----|-----|-----|--|------|-------|------|
| | D81 | D82 | D83 | D84 | COM1 | COM2 | COM3 | COM4 |
| 0 | 1 | 0 | 1 | 0 | on | off | on | off |
| 1 | 1 | 0 | 1 | 0 | blink | off | blink | off |

(2) BF0 to BF2 ... Segment blinking frequency setting control data

These control data bits are used to set the display segment blinking frequency

| Control data | | | Segment blinking frequency fb[Hz] | | |
|--------------|-----|-----|--|--|---|
| BF0 | BF1 | BF2 | Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz]typ) | External clock operating mode (The control data OC is 1 and EXF is 0, fCK1=300[kHz]typ) | External clock operating mode (The control data OC is 1 and EXF is 1, fCK2=38[kHz]typ) |
| 0 | 0 | 0 | fosc/600000 | fCK1/600000 | fCK2/75000 |
| 1 | 0 | 0 | fosc/360000 | fCK1/360000 | fCK2/45000 |
| 0 | 1 | 0 | fosc/300000 | fCK1/300000 | fCK2/37500 |
| 1 | 1 | 0 | fosc/240000 | fCK1/240000 | fCK2/30000 |
| 0 | 0 | 1 | fosc/180000 | fCK1/180000 | fCK2/22500 |
| 1 | 0 | 1 | fosc/150000 | fCK1/150000 | fCK2/18750 |
| 0 | 1 | 1 | fosc/120000 | fCK1/120000 | fCK2/15000 |
| 1 | 1 | 1 | fosc/100000 | fCK1/100000 | fCK2/12500 |

(3) FC0 to FC2 ... Common/segment output waveform frame frequency setting control data

These control data bits set the frame frequency of the common and segment output waveforms.

| Control data | | | Common/segment output waveform frame frequency fo[Hz] | | |
|--------------|-----|-----|--|--|---|
| FC0 | FC1 | FC2 | Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz]typ) | External clock operating mode (The control data OC is 1 and EXF is 0, fCK1=300[kHz]typ) | External clock operating mode (The control data OC is 1 and EXF is 1, fCK2=38[kHz]typ) |
| 0 | 0 | 0 | fosc/4608 | fCK1/4608 | fCK2/576 |
| 0 | 0 | 1 | fosc/3456 | fCK1/3456 | fCK2/432 |
| 0 | 1 | 0 | fosc/3072 | fCK1/3072 | fCK2/384 |
| 0 | 1 | 1 | fosc/2304 | fCK1/2304 | fCK2/288 |
| 1 | 0 | 0 | fosc/1536 | fCK1/1536 | fCK2/192 |
| 1 | 0 | 1 | fosc/1152 | fCK1/1152 | fCK2/144 |
| 1 | 1 | 0 | fosc/768 | fCK1/768 | fCK2/96 |

Note: When is setting (FC0, FC1, FC2)=(1, 1, 1), the frame frequency is same as frame frequency at the time of the (FC0, FC1, FC2)=(0, 1, 0) setting (fosc/3072, fCK1/3072, fCK2/384).

LC75890W

(4) DT ... 1/4-duty 1/3-bias drive or static drive switching control data

This control data bit selects either 1/4-duty 1/3-bias drive or static drive.

| DT | Drive scheme | Common output pins states | | |
|----|-------------------------|---------------------------|------------------------|------------------------|
| | | COM2 | COM3 | COM4 |
| 0 | 1/4 duty 1/3 bias drive | COM2 | COM3 | COM4 |
| 1 | Static drive | "L" (V _{SS}) | "L" (V _{SS}) | "L" (V _{SS}) |

Note: COM2, COM3, COM4 : Common output

"L" (V_{SS}) : "L" (V_{SS}) level output

(5) EXF ... External clock operating frequency setting control data

This control data bit sets the operating frequency of the external clock which input into the OSC1 pin, when the external clock operating mode (OC = "1") is set. However, this control data is effective only when external clock operating mode (OC = "1") is set.

| EXF | External clock operating frequency f _{CK} [kHz] |
|-----|--|
| 0 | f _{CK1} =300[kHz]typ |
| 1 | f _{CK2} =38[kHz]typ |

(6) OC ... Internal oscillator operating mode/external clock operating mode switching control data

This control data bit selects either the internal oscillator operating mode or external clock operating mode.

| OC | Fundamental clock operating mode | I/O pin (S37/OSCI) state |
|----|------------------------------------|--------------------------|
| 0 | Internal oscillator operating mode | S37 |
| 1 | External clock operating mode | OSCI |

Note: S37: Segment output

OSCI: External clock input

(7) SC ... Segment on/off control data

This control data bit controls the on/off state of the segments.

| SC | Display state |
|----|---------------|
| 0 | On |
| 1 | Off |

Note that when the segments are turned off by setting SC to 1, the segments are turned off by outputting segment off waveforms from the segment output pins.

(8) BU ... Normal mode/power-saving mode control data

This control data bit selects either normal mode or power-saving mode.

| BU | Mode |
|----|--|
| 0 | Normal mode |
| 1 | Power saving mode In this mode, the internal oscillator circuit stops oscillation (the S37/OSCI pin is configured for segment output) if the IC is in the internal oscillator operating mode (OC=0) and the IC stops receiving external clock signals (the S37/OSCI pin is configured for external clock input) if the IC is in the external clock operating mode (OC=1). In addition, the common and segment output pins go to the V _{SS} level and the operation of LCD drive bias voltage stabilization circuit stops. However, the S1/P1 to S12/P12 output pins can be used as general-purpose output ports under the control of the data bits P0 to P3. (The general-purpose output port P1 to P12 can not be used as PWM output). |

LC75890W

(9) W10 to W15, W20 to W25, W30 to W35 ... PWM data of the PWM output

These control data bits set the pulse width of the PWM output P1 to P12. However, when the PWM output function isn't used, these control data bits become invalid. In addition, when the external clock operating frequency is set the $f_{CK2} = 38[\text{kHz}]_{\text{typ}}$ ($\text{EXF} = "1"$) in external clock operating mode ($\text{OC} = "1"$), these control data bits become invalid.

| Wn0 | Wn1 | Wn2 | Wn3 | Wn4 | Wn5 | Pulse width of PWM output |
|-----|-----|-----|-----|-----|-----|---------------------------|
| 0 | 0 | 0 | 0 | 0 | 0 | $(1/64) \times T_p$ |
| 1 | 0 | 0 | 0 | 0 | 0 | $(2/64) \times T_p$ |
| 0 | 1 | 0 | 0 | 0 | 0 | $(3/64) \times T_p$ |
| 1 | 1 | 0 | 0 | 0 | 0 | $(4/64) \times T_p$ |

Note: W10 to W15 ... PWM data of the PWM output (Ch1)

W20 to W25 ... PWM data of the PWM output (Ch2)

W30 to W35 ... PWM data of the PWM output (Ch3)

$$T_p = \frac{1}{f_p}$$

LC75890W

(10) PF0 to PF3 ... PWM output waveform frame frequency setting control data

These control data bits set the frame frequency of the PWM output waveforms. However, when the PWM output function isn't used, these control data bits become invalid. In addition, when the external clock operating frequency is set the $f_{CK2} = 38[\text{kHz}]_{\text{typ}}$ ($\text{EXF} = "1"$) in external clock operating mode ($\text{OC} = "1"$), these control data bits become invalid.

| Control data | | | | PWM output waveform frame frequency $f_p[\text{Hz}]$ | |
|--------------|-----|-----|-----|--|--|
| PF0 | PF1 | PF2 | PF3 | Internal oscillator operating mode (The control data OC is 0, $f_{osc}=300[\text{kHz}]_{\text{typ}}$) | External clock operating mode (The control data OC is 1 and EXF is 0, $f_{CK1}=300[\text{kHz}]_{\text{typ}}$) |
| 0 | 0 | 0 | 0 | $f_{osc}/1536$ | $f_{CK1}/1536$ |
| 1 | 0 | 0 | 0 | $f_{osc}/1408$ | $f_{CK1}/1408$ |
| 0 | 1 | 0 | 0 | $f_{osc}/1280$ | $f_{CK1}/1280$ |
| 1 | 1 | 0 | 0 | $f_{osc}/1152$ | $f_{CK1}/1152$ |
| 0 | 0 | 1 | 0 | $f_{osc}/1024$ | $f_{CK1}/1024$ |
| 1 | 0 | 1 | 0 | $f_{osc}/896$ | $f_{CK1}/896$ |
| 0 | 1 | 1 | 0 | $f_{osc}/768$ | $f_{CK1}/768$ |
| 1 | 1 | 1 | 0 | $f_{osc}/640$ | $f_{CK1}/640$ |
| 0 | 0 | 0 | 1 | $f_{osc}/512$ | $f_{CK1}/512$ |
| 1 | 0 | 0 | 1 | $f_{osc}/384$ | $f_{CK1}/384$ |
| 0 | 1 | 0 | 1 | $f_{osc}/256$ | $f_{CK1}/256$ |

Note: When are setting $(\text{PF0}, \text{PF1}, \text{PF2}, \text{PF3})=(1, 1, 0, 1)$ and $(X, X, 1, 1)$, the frame frequency is same as frame frequency at the time of the $(\text{PF0}, \text{PF1}, \text{PF2}, \text{PF3})=(1, 0, 1, 0)$ setting ($f_{osc}/896, f_{CK1}/896$).

X: don't care

(11) P1A, P1B to P12A, P12B ... General-purpose output function/PWM output function switching control data of the general-purpose output port

These control data bits set the general-purpose output function (High or low level output) or PWM output function of the general-purpose output ports P1 to P12. However, when the S1/P1 to S12/P12 output pins aren't set the general-purpose output port, these control data bits become invalid. In addition, be careful of being unable to set a PWM output function when the external clock operating frequency is set the $f_{CK2} = 38[\text{kHz}]_{\text{typ}}$ ($\text{EXF} = "1"$) in external clock operating mode ($\text{OC} = "1"$).

| PnA | PnB | Functions of the general-purpose output port (Pn) |
|-----|-----|--|
| 0 | 0 | General-purpose output function (High or low level output) |
| 1 | 0 | PWM output function (Ch1) |
| 0 | 1 | PWM output function (Ch2) |
| 1 | 1 | PWM output function (Ch3) |

Note: The data PnA, PnB (n=1 to 12) are the control data switching the general-purpose output function or PWM output function of the general-purpose output ports P1 to p12. For example, if the S10/P10 output pin is set the general-purpose output port, the general-purpose output port P10 pin is selected the PWM output function (Ch1) when $(\text{P10A}, \text{P10B}) = (1, 0)$.

LC75890W

(12) P0 to P3 ... Segment output port/general-purpose output port switching control data

These control data bits switch the segment output port/general-purpose output port functions of the S1/P1 to S12/P12 output pins.

| Control data | | | | Output pin state | | | | | | | | | | | |
|--------------|----|----|----|------------------|-------|-------|-------|-------|-------|-------|-------|-------|---------|---------|---------|
| P0 | P1 | P2 | P3 | S1/P1 | S2/P2 | S3/P3 | S4/P4 | S5/P5 | S6/P6 | S7/P7 | S8/P8 | S9/P9 | S10/P10 | S11/P11 | S12/P12 |
| 0 | 0 | 0 | 0 | S1 | S2 | S3 | S4 | S5 | S6 | S7 | S8 | S9 | S10 | S11 | S12 |
| 0 | 0 | 0 | 1 | P1 | S2 | S3 | S4 | S5 | S6 | S7 | S8 | S9 | S10 | S11 | S12 |
| 0 | 0 | 1 | 0 | P1 | P2 | S3 | S4 | S5 | S6 | S7 | S8 | S9 | S10 | S11 | S12 |
| 0 | 0 | 1 | 1 | P1 | P2 | P3 | S4 | S5 | S6 | S7 | S8 | S9 | S10 | S11 | S12 |
| 0 | 1 | 0 | 0 | P1 | P2 | P3 | P4 | S5 | S6 | S7 | S8 | S9 | S10 | S11 | S12 |
| 0 | 1 | 0 | 1 | P1 | P2 | P3 | P4 | P5 | S6 | S7 | S8 | S9 | S10 | S11 | S12 |
| 0 | 1 | 1 | 0 | P1 | P2 | P3 | P4 | P5 | P6 | S7 | S8 | S9 | S10 | S11 | S12 |
| 0 | 1 | 1 | 1 | P1 | P2 | P3 | P4 | P5 | P6 | P7 | S8 | S9 | S10 | S11 | S12 |
| 1 | 0 | 0 | 0 | P1 | P2 | P3 | P4 | P5 | P6 | P7 | P8 | S9 | S10 | S11 | S12 |
| 1 | 0 | 0 | 1 | P1 | P2 | P3 | P4 | P5 | P6 | P7 | P8 | P9 | S10 | S11 | S12 |
| 1 | 0 | 1 | 0 | P1 | P2 | P3 | P4 | P5 | P6 | P7 | P8 | P9 | P10 | S11 | S12 |
| 1 | 0 | 1 | 1 | P1 | P2 | P3 | P4 | P5 | P6 | P7 | P8 | P9 | P10 | P11 | S12 |
| 1 | 1 | 0 | 0 | P1 | P2 | P3 | P4 | P5 | P6 | P7 | P8 | P9 | P10 | P11 | P12 |

Note1: Sn (n=1 to 12)...Segment output port Pn (n=1 to 12)...General-purpose output port

Note2: When are setting (P0, P1, P2, P3)=(1, 1, 0, 1), (1, 1, 1, 0) and (1, 1, 1, 1), the all S1/P1 to S12/P12 output pins are selected the segment output port.

The table below lists the correspondence between the display data and the output pins when these pins are selected to be general-purpose output ports (general-purpose output function).

| Output pin | Correspondence display data | |
|------------|-----------------------------|--------------|
| | 1/4 duty drive | Static drive |
| S1/P1 | D1 | D1 |
| S2/P2 | D5 | D2 |
| S3/P3 | D9 | D3 |
| S4/P4 | D13 | D4 |
| S5/P5 | D17 | D5 |
| S6/P6 | D21 | D6 |
| S7/P7 | D25 | D7 |
| S8/P8 | D29 | D8 |
| S9/P9 | D33 | D9 |
| S10/P10 | D37 | D10 |
| S11/P11 | D41 | D11 |
| S12/P12 | D45 | D12 |

For example, if the circuit is operated in 1/4 duty and the S4/P4 output pin is selected to be a general-purpose output port and is set general-purpose output function, the S4/P4 output pin will output a high (VLCD) level when the display data D13 is 1, and will output a low (VSS) level when D13 is 0.

LC75890W

Display Data and Display Blinking Control Data and Output Pin Correspondence (1/4 Duty Drive)

| | | | | | | S37/OSCI | D145 | D146 | D147 | D148 | BD37 |

Note: This table assumes that pins S1/P1 to S12/P12 and S37/OSCI are configured for segment output.

For example, the table below lists the output states for the S21 output pin.

| Display data | | | | Blinking control data | Output pin (S21) state |
|--------------|-----|-----|-----|-----------------------|--|
| D81 | D82 | D83 | D84 | BD21 | |
| 0 | 0 | 0 | 0 | 0 | The LCD segments corresponding to COM1, COM2, COM3, and COM4 are off. |
| 0 | 0 | 0 | 1 | 0 | The LCD segment corresponding to COM4 is on. |
| 0 | 0 | 1 | 0 | 0 | The LCD segment corresponding to COM3 is on. |
| 0 | 0 | 1 | 1 | 0 | The LCD segments corresponding to COM3 and COM4 are on. |
| 0 | 1 | 0 | 0 | 0 | The LCD segment corresponding to COM2 is on. |
| 0 | 1 | 0 | 1 | 0 | The LCD segments corresponding to COM2 and COM4 are on. |
| 0 | 1 | 1 | 0 | 0 | The LCD segments corresponding to COM2 and COM3 are on. |
| 0 | 1 | 1 | 1 | 0 | The LCD segments corresponding to COM2, COM3, and COM4 are on. |
| 1 | 0 | 0 | 0 | 0 | The LCD segment corresponding to COM1 is on. |
| 1 | 0 | 0 | 1 | 0 | The LCD segments corresponding to COM1 and COM4 are on. |
| 1 | 0 | 1 | 0 | 0 | The LCD segments corresponding to COM1 and COM3 are on. |
| 1 | 0 | 1 | 1 | 0 | The LCD segments corresponding to COM1, COM3, and COM4 are on. |
| 1 | 1 | 0 | 0 | 0 | The LCD segments corresponding to COM1 and COM2 are on. |
| 1 | 1 | 0 | 1 | 0 | The LCD segments corresponding to COM1, COM2, and COM4 are on. |
| 1 | 1 | 1 | 0 | 0 | The LCD segments corresponding to COM1, COM2, and COM3 are on. |
| 1 | 1 | 1 | 1 | 0 | The LCD segments corresponding to COM1, COM2, COM3, and COM4 are on. |
| 0 | 0 | 0 | 0 | 1 | The LCD segments corresponding to COM1, COM2, COM3, and COM4 are off. |
| 0 | 1 | 0 | 1 | 1 | The LCD segments corresponding to COM2 and COM4 are blinking. |
| 1 | 0 | 1 | 0 | 1 | The LCD segments corresponding to COM1 and COM3 are blinking. |
| 1 | 1 | 1 | 1 | 1 | The LCD segments corresponding to COM1, COM2, COM3, and COM4 are blinking. |

LC75890W

Display Data and Display Blinking Control Data and Output Pin Correspondence (Static Drive)

| S18 | D18 | BD18 | S36 | D36 | BD36 |
| S37/OSCI | D37 | BD37 | | | |

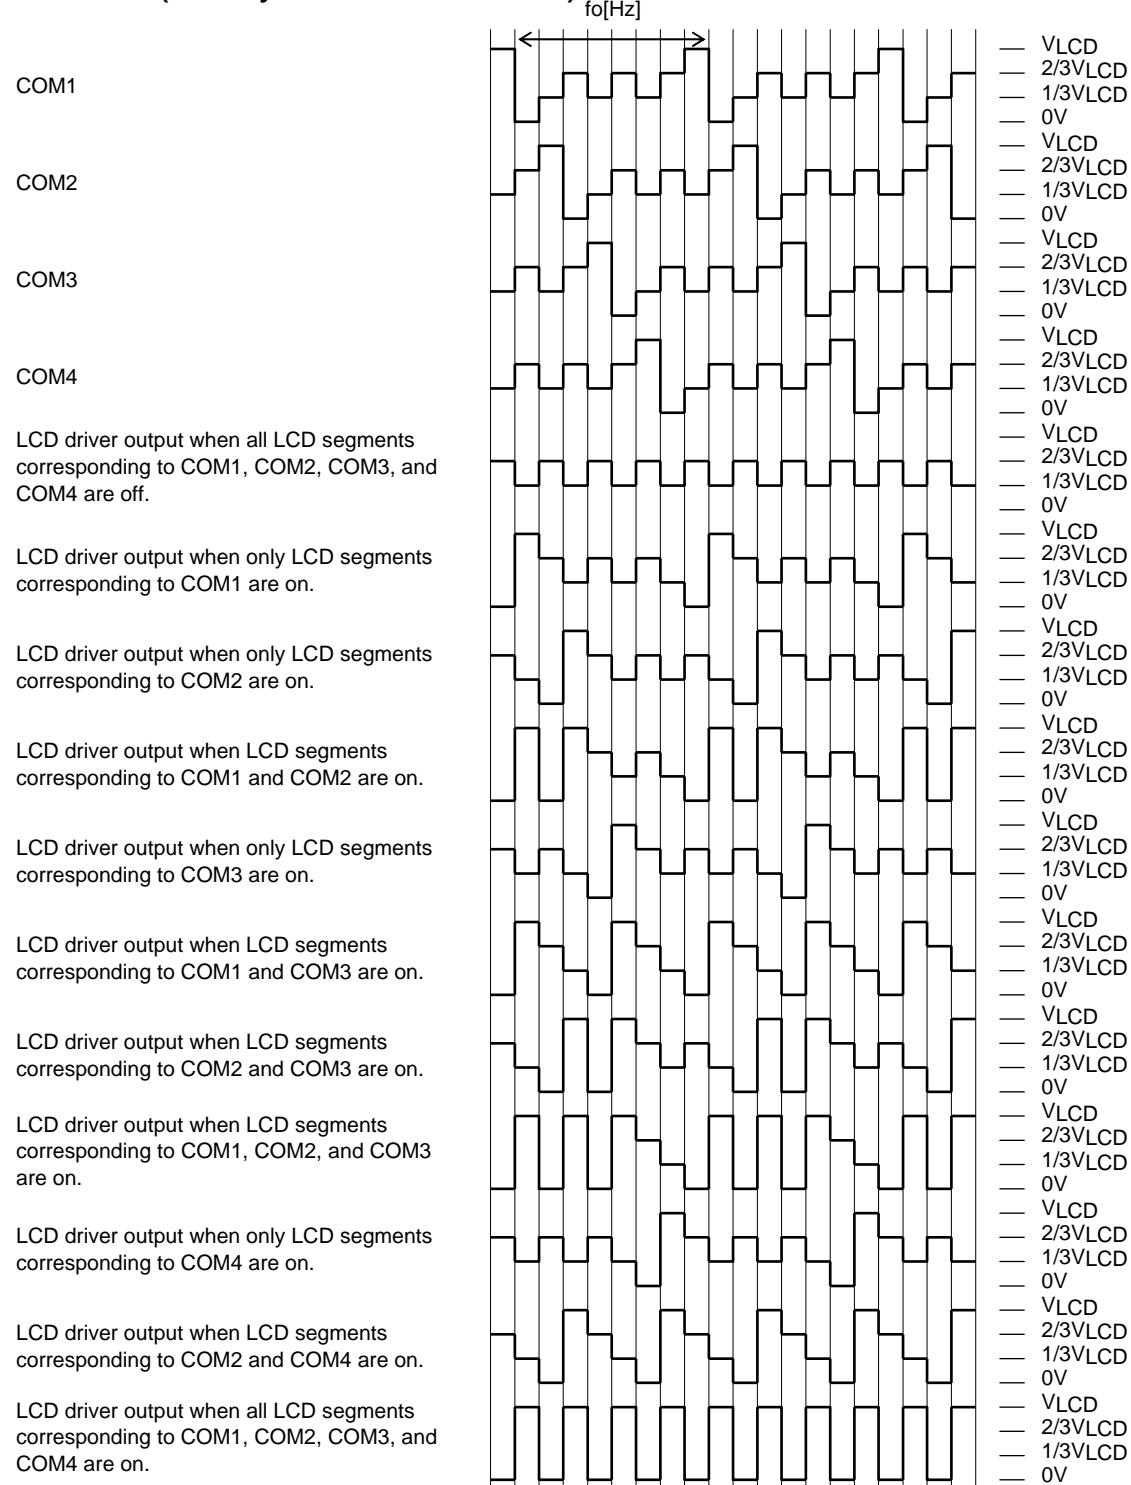

Note: This table assumes that pins S1/P1 to S12/P12 and S37/OSCI are configured for segment output.

For example, the table below lists the output states for the S21 output pin.

| Display data | Blinking control data | Output pin (S21) state |
|--------------|-----------------------|--|
| D21 | BD21 | |
| 0 | 0 | The LCD segment corresponding to COM1 is off. |
| 1 | 0 | The LCD segment corresponding to COM1 is on. |
| 0 | 1 | The LCD segment corresponding to COM1 is off. |
| 1 | 1 | The LCD segment corresponding to COM1 is blinking. |

LC75890W

Output waveforms (1/4-Duty 1/3-Bias Drive Scheme)

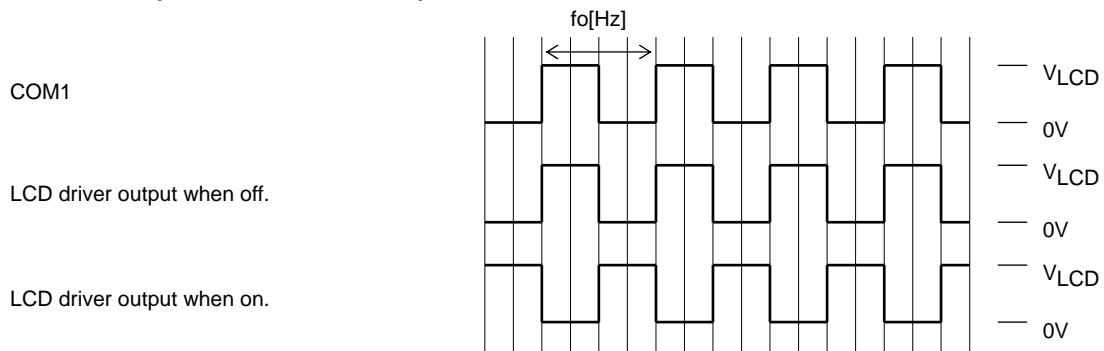

| Control data | | | Common/segment output waveform frame frequency fo[Hz] | | |
|--------------|-----|-----|---|--|---|
| FC0 | FC1 | FC2 | Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz]typ) | External clock operating mode (The control data OC is 1 and EXF is 0, $f_{CK1}=300[\text{kHz}]$ typ) | External clock operating mode (The control data OC is 1 and EXF is 1, $f_{CK2}=38[\text{kHz}]$ typ) |
| 0 | 0 | 0 | fosc/4608 | $f_{CK1}/4608$ | $f_{CK2}/576$ |
| 0 | 0 | 1 | fosc/3456 | $f_{CK1}/3456$ | $f_{CK2}/432$ |
| 0 | 1 | 0 | fosc/3072 | $f_{CK1}/3072$ | $f_{CK2}/384$ |
| 0 | 1 | 1 | fosc/2304 | $f_{CK1}/2304$ | $f_{CK2}/288$ |
| 1 | 0 | 0 | fosc/1536 | $f_{CK1}/1536$ | $f_{CK2}/192$ |
| 1 | 0 | 1 | fosc/1152 | $f_{CK1}/1152$ | $f_{CK2}/144$ |
| 1 | 1 | 0 | fosc/768 | $f_{CK1}/768$ | $f_{CK2}/96$ |

Note: When setting $(FC0, FC1, FC2) = (1, 1, 1)$, the frame frequency is same as frame frequency at the time of the $(FC0, FC1, FC2) = (0, 1, 0)$ setting ($fosc/3072$, $fCK1/3072$, $fCK2/384$).

LC75890W

Output waveforms (Static Drive Scheme)

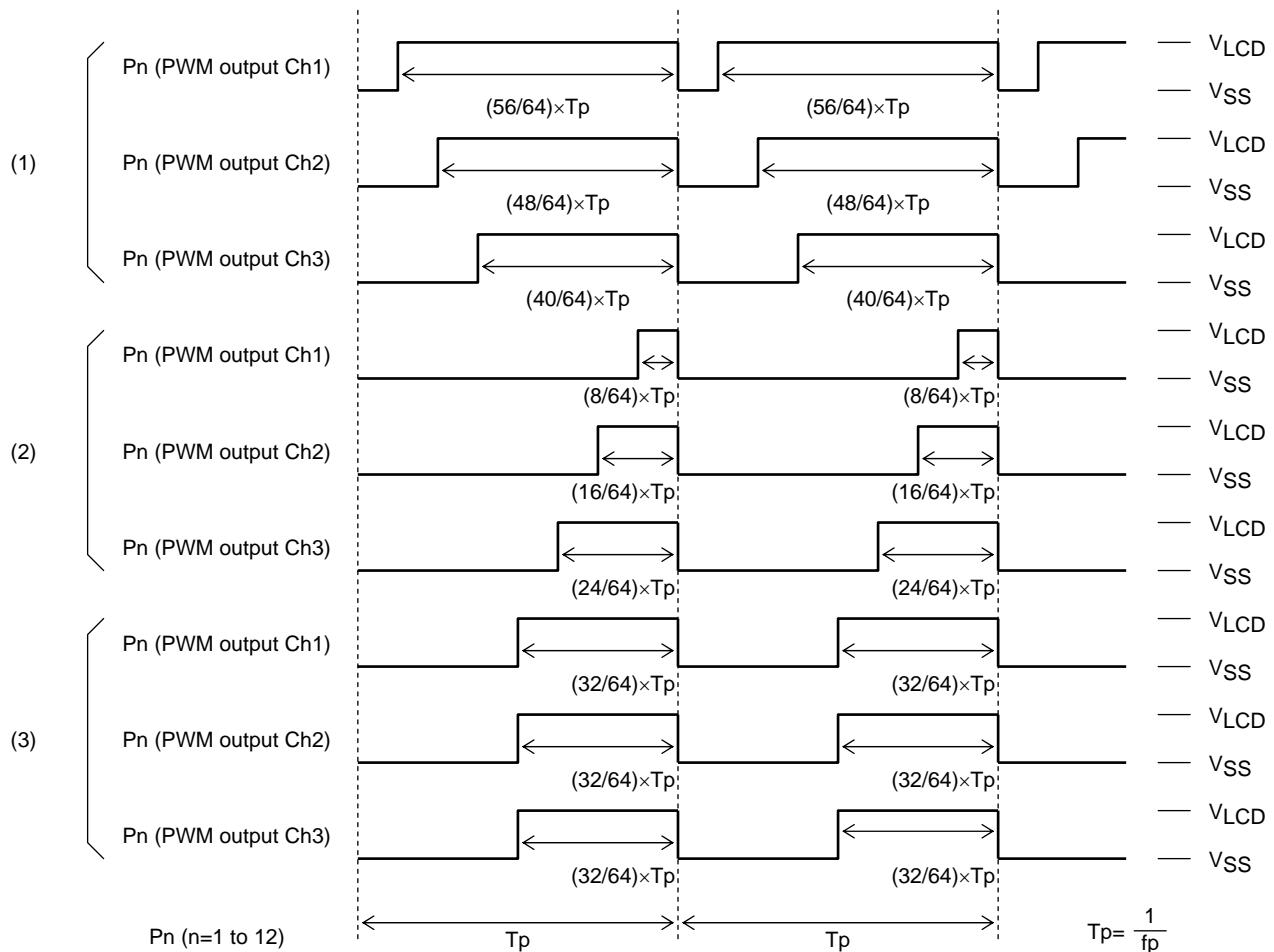

| Control data | | | Common/segment output waveform frame frequency fo[Hz] | | |
|--------------|-----|-----|---|--|---|
| FC0 | FC1 | FC2 | Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz]typ) | External clock operating mode (The control data OC is 1 and EXF is 0, f _{CK1} =300[kHz]typ) | External clock operating mode (The control data OC is 1 and EXF is 1, f _{CK2} =38[kHz]typ) |
| 0 | 0 | 0 | fosc/4608 | f _{CK1} /4608 | f _{CK2} /576 |
| 0 | 0 | 1 | fosc/3456 | f _{CK1} /3456 | f _{CK2} /432 |
| 0 | 1 | 0 | fosc/3072 | f _{CK1} /3072 | f _{CK2} /384 |
| 0 | 1 | 1 | fosc/2304 | f _{CK1} /2304 | f _{CK2} /288 |
| 1 | 0 | 0 | fosc/1536 | f _{CK1} /1536 | f _{CK2} /192 |
| 1 | 0 | 1 | fosc/1152 | f _{CK1} /1152 | f _{CK2} /144 |
| 1 | 1 | 0 | fosc/768 | f _{CK1} /768 | f _{CK2} /96 |

Note: When is setting (FC0, FC1, FC2) = (1, 1, 1), the frame frequency is same as frame frequency at the time of the (FC0, FC1, FC2) = (0, 1, 0) setting (fosc/3072, f_{CK1}/3072, f_{CK2}/384).

LC75890W

PWM output waveforms

| Control data | | | | | | | | | | | | | | | | | PWM output waveforms | |

| W10 | W11 | W12 | W13 | W14 | W15 | W20 | W21 | W22 | W23 | W24 | W25 | W30 | W31 | W32 | W33 | W34 | W35 | |
| 1 | 1 | 1 | 0 | 1 | 1 | 1 | 1 | 1 | 1 | 0 | 1 | 1 | 1 | 1 | 0 | 0 | 1 | (1) |
| 1 | 1 | 1 | 0 | 0 | 0 | 1 | 1 | 1 | 1 | 0 | 0 | 1 | 1 | 1 | 0 | 1 | 0 | (2) |
| 1 | 1 | 1 | 1 | 1 | 0 | 1 | 1 | 1 | 1 | 1 | 0 | 1 | 1 | 1 | 1 | 1 | 0 | (3) |

| Control data | | | | PWM output waveform frame frequency $f_p[\text{Hz}]$ | | | | | | | | | | | | |
|--------------|-----|-----|-----|--|--|--|--|--|--|--|--|---|--|--|--|--|
| PF0 | PF1 | PF2 | PF3 | Internal oscillator operating mode (The control data OC is 0, $f_{\text{oosc}}=300[\text{kHz}]$ typ) | | | | | | | | External clock operating mode (The control data OC is 1 and EXF is 0, $f_{\text{CK1}}=300[\text{kHz}]$ typ) | | | | |
| 0 | 0 | 0 | 0 | $f_{\text{oosc}}/1536$ | | | | | | | | $f_{\text{CK1}}/1536$ | | | | |
| 1 | 0 | 0 | 0 | $f_{\text{oosc}}/1408$ | | | | | | | | $f_{\text{CK1}}/1408$ | | | | |
| 0 | 1 | 0 | 0 | $f_{\text{oosc}}/1280$ | | | | | | | | $f_{\text{CK1}}/1280$ | | | | |
| 1 | 1 | 0 | 0 | $f_{\text{oosc}}/1152$ | | | | | | | | $f_{\text{CK1}}/1152$ | | | | |
| 0 | 0 | 1 | 0 | $f_{\text{oosc}}/1024$ | | | | | | | | $f_{\text{CK1}}/1024$ | | | | |
| 1 | 0 | 1 | 0 | $f_{\text{oosc}}/896$ | | | | | | | | $f_{\text{CK1}}/896$ | | | | |
| 0 | 1 | 1 | 0 | $f_{\text{oosc}}/768$ | | | | | | | | $f_{\text{CK1}}/768$ | | | | |
| 1 | 1 | 1 | 0 | $f_{\text{oosc}}/640$ | | | | | | | | $f_{\text{CK1}}/640$ | | | | |
| 0 | 0 | 0 | 1 | $f_{\text{oosc}}/512$ | | | | | | | | $f_{\text{CK1}}/512$ | | | | |
| 1 | 0 | 0 | 1 | $f_{\text{oosc}}/384$ | | | | | | | | $f_{\text{CK1}}/384$ | | | | |
| 0 | 1 | 0 | 1 | $f_{\text{oosc}}/256$ | | | | | | | | $f_{\text{CK1}}/256$ | | | | |

Note1: When is setting $(\text{PF0}, \text{PF1}, \text{PF2}, \text{PF3}) = (1, 1, 0, 1)$ and $(X, X, 1, 1)$, the frame frequency is same as frame frequency at the time of the $(\text{PF0}, \text{PF1}, \text{PF2}, \text{PF3}) = (1, 0, 1, 0)$ setting ($f_{\text{oosc}}/896, f_{\text{CK1}}/896$). X: don't care

Display Control and the INH Pin

Since the LSI internal data (1/4 duty drive : the display data D1 to D148 and the control data, Static drive : the display data D1 to D37 and the control data) is undefined when power is first applied, applications should set the INH pin low at the same time as power is applied to turn off the display (This sets the S1/P1 to S12/P12, S13 to S36, COM4 to COM1, and S37/OSCI pins to the V_{SS} level.) and during this period send serial data from the controller. The controller should then set the INH pin high after the data transfer has completed. This procedure prevents meaningless display at power on.

(See Figure 4 and Figure 5.)

Notes on the Power On/Off Sequences

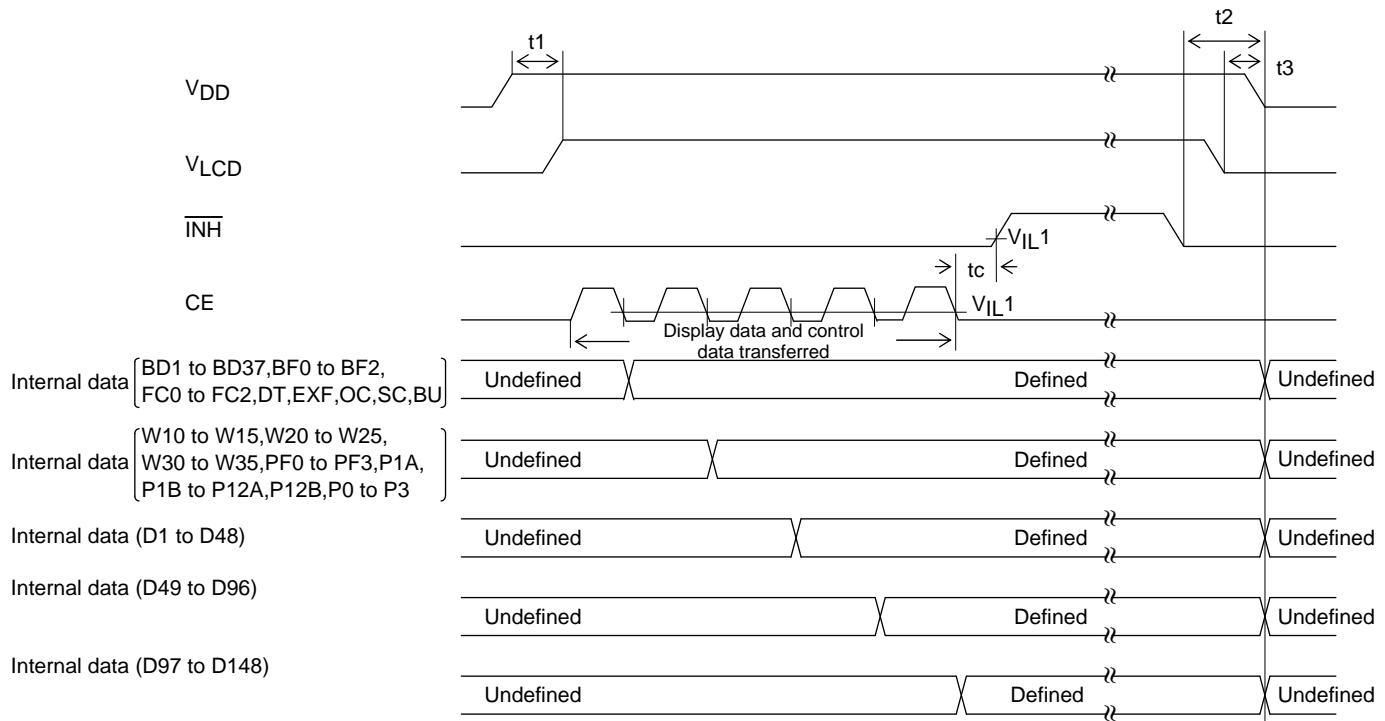

Applications should observe the following sequences when turning the LC75890 power on and off.

(See Figures 4 and Figure 5.)

- At power on : Logic block power supply (V_{DD}) on → LCD driver block power supply (V_{LCD}) on
- At power off : LCD driver block power supply (V_{LCD}) off → Logic block power supply (V_{DD}) off

However, if the logic and LCD driver block use a shared power supply, then the power supplies can be turned on and off at the same time.

(1) 1/4 duty drive

Note1 : $t_1 \geq 0$

$t_2 > 0$

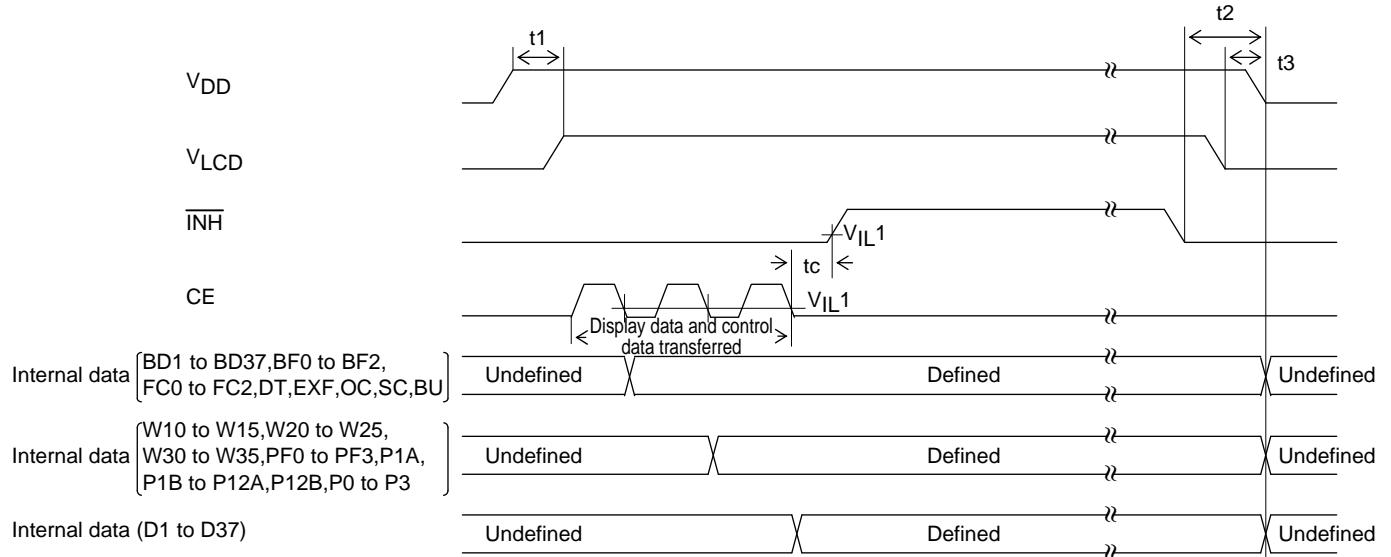

$t_3 \geq 0$ ($t_2 > t_3$)

$tc \dots 10 \mu s \text{ min}$

[Figure 4]

LC75890W

(2)Static drive

Note1 : $t_1 \geq 0$

$t_2 > 0$

$t_3 \geq 0$ ($t_2 > t_3$)

$t_c \dots 10 \mu s$ min

[Figure 5]

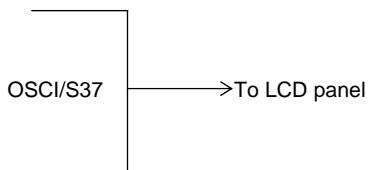

Notes on Controller Transfer of Display Data

When using the LC75890 in 1/4 duty, applications transfer the display data (D1 to D148) in three operations. In either case, applications should transfer all of the display data within 30 ms to maintain the quality of displayed image.

S37/OSCI Pin Peripheral Circuit

(1) Internal oscillator operating mode (control data OC = 0)

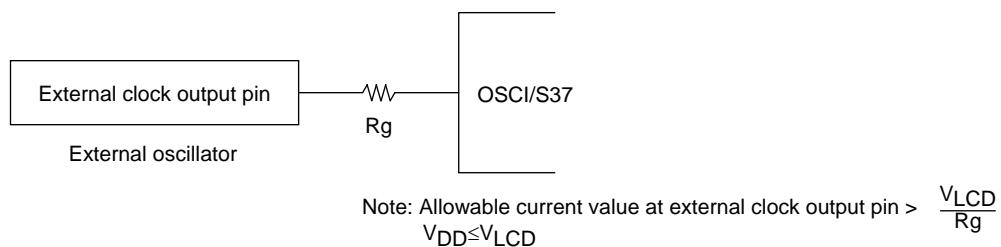

Connect the S37/OSCI pin to the LCD panel when the internal oscillator operating mode is selected.

(2) External clock operating mode (control data OC = 1)

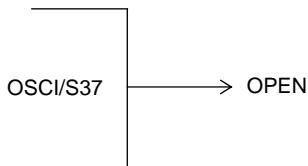

When the external clock operating mode is selected, insert a current protection resistor R_g (2.2 to 22 k Ω) between the S37/OSCI pin and external clock output pin (external oscillator). Determine the value of the resistance according to the allowable current value at the external clock output pin. Also make sure that the waveform of the external clock is not heavily distorted.

In addition, the following conditions must be met : $V_{DD} \leq V_{LCD}$.

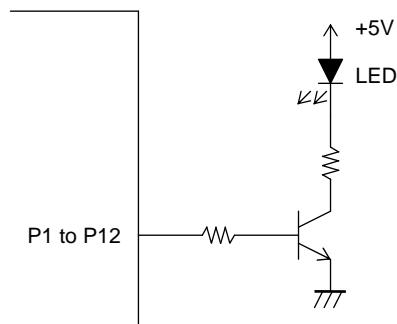

(3) Unused pin treatment

When the S37/OSCI pin is not to be used, select the internal oscillator operating mode (setting control data OC to 0) to keep the pin open.

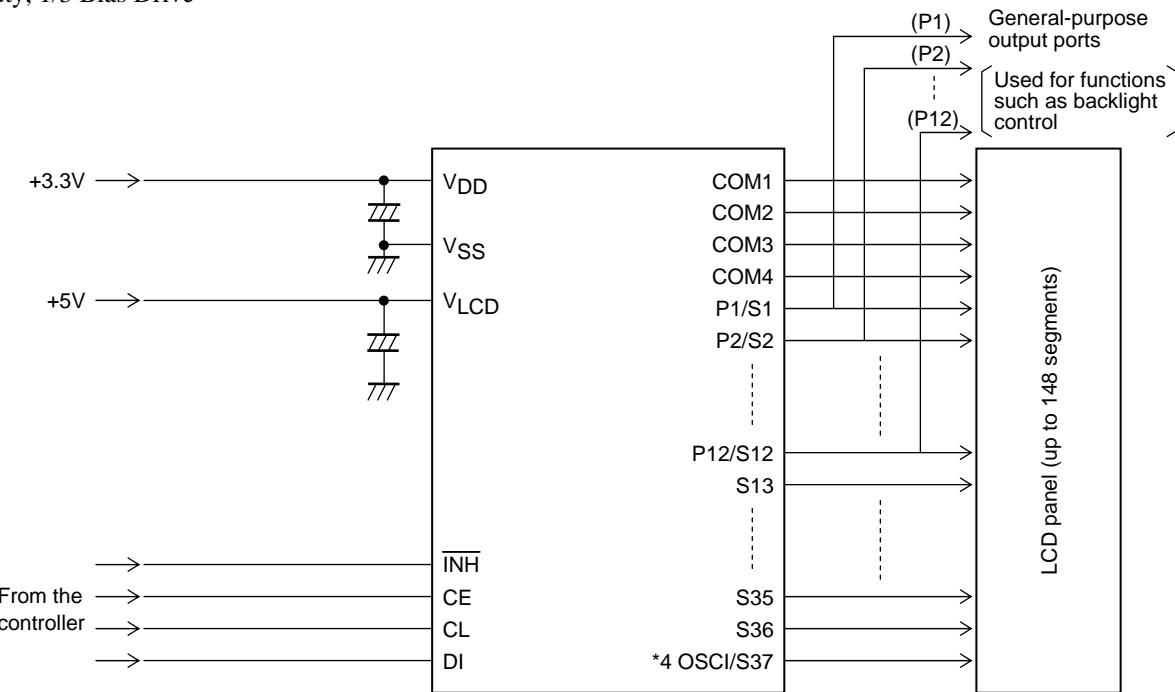

P1 to P12 pin peripheral circuit

It is recommended the circuit shown below be used to adjust the brightness of the LED backlight using the PWM output P1 to P12

Sample Applications Circuit 1

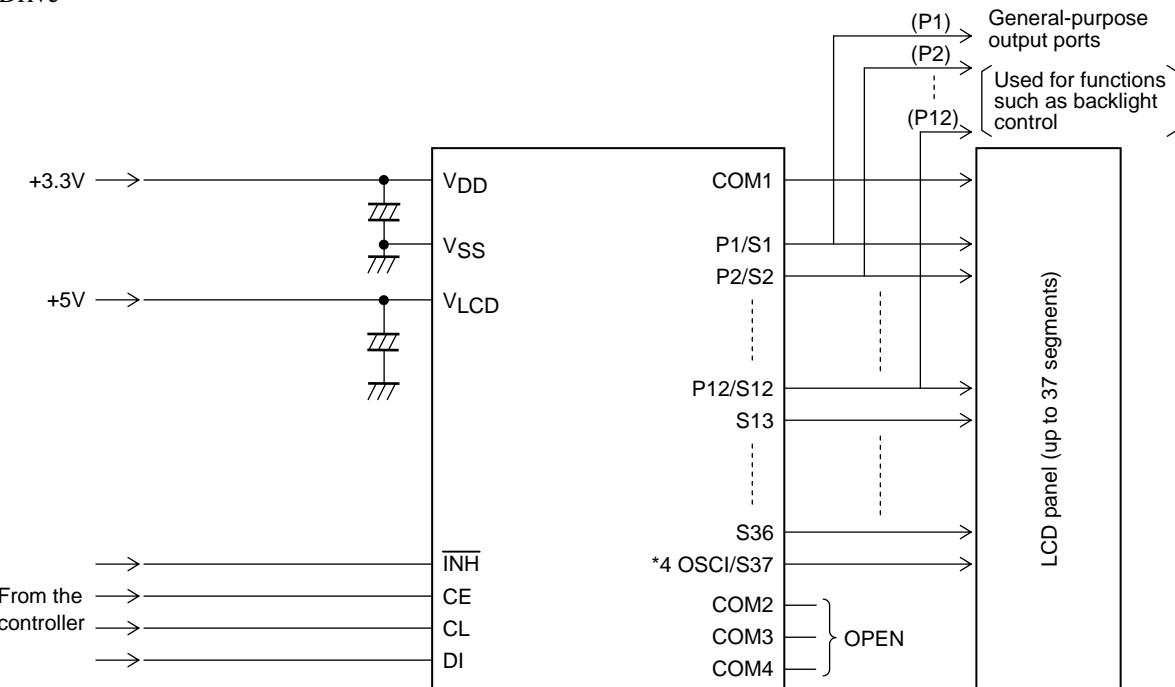

1/4 Duty, 1/3 Bias Drive

*4 Connect the S37/OSCI pin to the LCD panel in the internal oscillator operating mode and insert a current protection resistor R_g (2.2 to 22 k Ω) between the S37/OSCI pin and external clock output pin (external oscillator) in the external clock operating mode. (See "S37/OSCI Pin Peripheral Circuit")

Sample Applications Circuit 2

Static Drive

*4 Connect the S37/OSCI pin to the LCD panel in the internal oscillator operating mode and insert a current protection resistor R_g (2.2 to 22 k Ω) between the S37/OSCI pin and external clock output pin (external oscillator) in the external clock operating mode. (See "S37/OSCI Pin Peripheral Circuit")

LC75890W

ORDERING INFORMATION

| Device | Package | Shipping (Qty / Packing) |
|-------------|---|--------------------------|
| LC75890W-2H | SQFP80 12x12 / SQFP80 (Pb-Free / Halogen Free) | 1250 / Tray JEDEC |
| LC75890W-NH | SQFP80 12x12 / SQFP80 (Pb-Free / Halogen Free) | 1000 / Tape & Reel |
