electrostatic discharge	Tested to IEC61000-4-2 level 3					
contact discharge	The microphone shall operate normally after 10 discharges to is 6KV DC and the discharge network is 150pF & 330 Ω .					
air discharge	The microphone shall operate normally after 10 discharges to is 8KV DC and the discharge network is 150pF & 330 Ω					

SOLDERING CONDITION

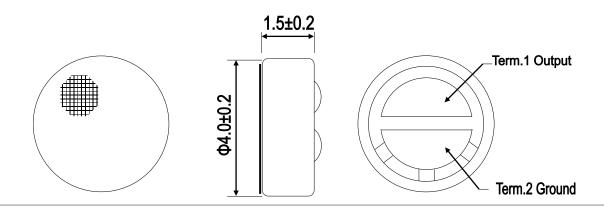

We suggest using an anti-static welding machine which can control soldering temperature automatically.
Soldering temperature should be controlled at under 320 °C and soldering time for each terminal should be 1~2 seconds.
Microphone should be fixed on the metal block (heat sink), which has high radiation effects, and heat sink shall contact with MIC tightly.
Microphone may easily be destroyed by the static electricity and the countermeasure for eliminating the static electricity shall be
electrocution (worktable and human body shall be ground connection).
