

## Film capacitors

Metallized polypropylene film capacitors (MKP)

**Series/Type:**            **B32674 ... B32678**

**Date:**                    **March 2023**

### Typical applications

- Frequency converters
- Industrial and high-end power supplies
- Solar inverters

### Climatic

- Max. operating temperature: 105 °C (case)
- Climatic category (IEC 60068-1:2013):  
40/105/56

### Construction

- Dielectric: polypropylene (MKP)
- Plastic case (UL 94 V-0)
- Epoxy resin sealing (UL 94 V-0)

### Features

- Capacitance values up to 270  $\mu$ F
- High CV product, compact
- Good self-healing properties
- Over-voltage capability
- Low losses with high current capability
- High reliability
- Long useful life
- AEC-Q200D compliant

### Terminals

- Parallel wire leads, lead-free tinned
- 2-pin, 4-pin and 12-pin versions
- Standard lead lengths: 6 –1 mm

### Marking

Manufacturer's logo and lot number,  
date code, rated capacitance (coded),  
capacitance tolerance (code letter),  
rated DC voltage

### Delivery mode

Bulk (untaped, lead length 6 –1 mm)

**Dimensional drawings**

Number of wires	Lead spacing $e \pm 0.4$	Lead diameter $d_1 \pm 0.05$	Type
2-pin	27.5	0.8	B32674D
2-pin	37.5	1.0	B32676T
4-pin	37.5	1.2	B32676G

MOQ = Minimum Order Quantity, consisting of 4 packing units.

Intermediate capacitance values are available on request.

**Composition of ordering code**

+ = Capacitance tolerance code:

K = ±10%

J = ±5%

Packing code:

000 = untaped (lead length 6 – 1 mm)

1) Capacitance value measured at 1 kHz

2) Max. ripple current  $I_{RMS}$  at 70 °C at 10 kHz for a  $\Delta T \leq 20 \text{ °C}$  when  $\Delta ESR_{typ} \leq \pm 5\%$

3) ESL value measured at resonance frequency (see specific graphs of Z versus frequency)

**Ordering codes and packing units (lead spacing 27.5 mm)**

**Technical data**

Reference standard: IEC 61071:2007 and AEC-Q200D. All data given at  $T = 20\text{ °C}$ , unless otherwise specified.

Rated temperature $T_R$	+85 °C				
Operating temperature range (case)	Max. operating temperature, $T_{op,max}$ +105 °C Upper category temperature $T_{max}$ +105 °C Lower category temperature $T_{min}$ -40 °C				
Insulation resistance $R_{ins}$ given as time constant $\tau = C_R \cdot R_{ins}$ , rel. humidity $\leq 65\%$ (minimum as-delivered values)	$\tau > 10\,000\text{ s}$ (after 1 min) For $V_R \geq 500\text{ V}$ measured at 500 V For $V_R < 500\text{ V}$ measured at $V_R$				
DC test voltage between terminals (10 s)	$1.5 \cdot V_R$				
Voltage test terminal to case (10 s)	2110 V AC, 50 Hz				
Pulse Handling Capability (V/ $\mu$ s)	$I_P$ (A) / C ( $\mu$ F)				
Biased humidity Limit values after test	1000 hours / 40 °C / 93% relative humidity with $V_{R,DC}$ Capacitance change $ \Delta C/C $ $\leq 5\%$ Dissipation factor change $\Delta \tan \delta$ $\leq 0.002$ (at 1 kHz) Insulation resistance $R_{ins}$ $\geq 50\%$ of minimum as-delivered values				
Reliability:	Failure rate $\lambda$	1 fit ( $\leq 1 \cdot 10^{-9}/h$ ) at $0.5 \cdot V_R$ , 40 °C			
	Service life $t_{SL}$	200 000 h at $V_R$ , 85 °C			
		For conversion to other operating conditions and temperatures, refer to chapter "Quality, 2 Reliability".			
$V_R$ (V DC)	300	450	630	750	875
Continuous operating voltage $V_{op}$ (V DC) at 70 °C	450	630	800	900	1050
Continuous operating voltage $V_{op}$ (V DC) at 85 °C	300	450	630	75	875
For temperatures between 85 °C and 105 °C	1.2%/°C of $V_{op}$ derating compared to $V_{op}$ at 85 °C				

**Typical waveforms**

**Restrictions:**

**$V_P$ :** Maximum operating peak voltage of either polarity but of a non-reversing waveform, for which the capacitor has been designed for continuous operation.

$$\hat{V}_{AC} \leq 0.2 \cdot V_R$$

$$V_{p,max}:$$

Overvoltage	Maximum duration within one day	Observation
$1.1 \cdot V_R$	30% of on-load duration	System regulation
$1.15 \cdot V_R$	30 min	System regulation
$1.2 \cdot V_R$	5 min	System regulation
$1.3 \cdot V_R$	1 min	System regulation

NOTE 1 An overvoltage equal to  $1.5 \cdot V_R$  for 30 ms is permitted 1000 times during the life of the capacitor.

The amplitudes of the overvoltages that may be tolerated without significant reduction in the life time of the capacitor depend on their duration, the number of application and the capacitor temperature.

In addition these values assume that the overvoltages may appear when the internal temperature of the capacitor is less than 0 °C but within the temperature category.

NOTE 2 The average applied voltage must not be higher than the specified voltage.

### Pulse handling capability

"dV/dt" represents the maximum permissible voltage change per unit of time for non-sinusoidal voltages, expressed in V/μs.

Note:

*The values of dV/dt and  $k_0$  provided below must not be exceeded in order to avoid damaging the capacitor. These parameters are given for isolated pulses in such a way that the heat generated by one pulse will be completely dissipated before applying the next pulse. For a train of pulses, please refer to the curves of permissible AC voltage-current versus frequency.*

The equivalent heat coefficient "**G (mW/°C)**" is given for measuring the temperature on the lateral surface of the plastic box as Figure 1 shows. By using a thermocouple and avoiding effect of radiation and convection the temperature measured during operation conditions should be a result of the dissipated power divided by the equivalent heat coefficient.

### Self Heating by power dissipation & equivalent heat coefficient

The  $I_{RMS}$  and consequently the power dissipation must be limited during operation in order to not exceed the maximum limit of  $\Delta T$  allowed for this series.  $\Delta T_{max}$  given for this series is equal or lower than 20 °C at rated temperature (70 °C), for higher ambient temperatures  $\Delta T_{max}(T)$  will have the same derating factor than  $I_{RMS}$  versus temperature and then an equivalent derating as per:

$$\Delta T_{max}(T) = (\text{Factor})^2 \times \Delta T(70\text{ °C}).$$

For any particular  $I_{RMS}$  the  $\Delta T$  may be calculated by:

$$\Delta T(\text{°C}) = P_{dis}(\text{mW}) / G(\text{mW/°C}).$$

Where  $\Delta T(\text{°C})$  is the difference between the temperature measured on the box (see Figure 1) and the ambient temperature when capacitor is working during normal operation;

$$\Delta T(\text{°C}) = T_{op}(\text{°C}) - T_A(\text{°C}).$$

It represents the increasing of temperature provoked by the  $I_{RMS}$  during operation.

$G(\text{mW/°C})$  is the equivalent heat coefficient described above and  $P_{dis}(\text{mW})$  is the dissipated power defined by:

$$P_{dis}(\text{mW}) = ESR_{typ}(\text{m}\Omega) \times I_{RMS}^2(A_{RMS}).$$

### Example for thermal calculation:

We will take as reference B32678G8156K (15  $\mu\text{F}/875\text{ V}$ ) type for thermal calculation. Considering the following load and capacitor characteristics:

$I_{RMS}$ : 15  $A_{RMS}$  at 20 kHz

$T_A$ : 85 °C

30 × 50 × 57.5 box

$G(\text{mW/°C})$ : 145

Then we have to find the  $ESR_{typ}$  at 20 kHz what is approximately 4.0 m $\Omega$ .

So according to  $P_{dis}(\text{mW}) = ESR_{typ}(\text{m}\Omega) \times I_{RMS}^2(A_{RMS})$

we have the following:  $P_{dis}(\text{mW}) = 4.0\text{ m}\Omega \times 15\text{ }A_{RMS}^2 = 900\text{ mW}$

And as per  $\Delta T(\text{°C}) = P_{dis}(\text{mW}) / G(\text{mW/°C})$

we have the following:  $\Delta T(\text{°C}) = 900(\text{mW}) / 145(\text{mW/°C}) = 6.2\text{ °C}$ .

What is below of the  $\Delta T_{max}(85\text{ °C}) = (\text{Factor})^2 \times \Delta T(70\text{ °C}) = (0.7)^2 \times 20\text{ °C} = 9.8\text{ °C}$ .

On the other hand we may confirm that max  $I_{RMS}$  at 20 kHz at 70 °C = 26.5  $A_{RMS}$

And then max  $I_{RMS}$  for 85 °C of ambient temperature is defined as follows:

$$I_{RMS}(85\text{ °C}) = \text{Factor} \times I_{RMS}(70\text{ °C}) = 0.7 \times 26.5\text{ }A_{RMS} = 18.55\text{ }A_{RMS}$$

What confirms once again that  $I_{RMS}$  (15  $A_{RMS}$  at 20 kHz at 85 °C) is below the max specified for such frequency and ambient temperature.

**Life time expectancy - typical curves**

B3267\*3/4/6/1/8 (300 V DC / 450 V DC / 630 V DC / 750 V DC / 875 V DC)

Note: Confidence level of 98%

**Testing and Standards**

Test	Reference	Conditions of test	Performance requirements
Electrical parameters (Routine test)	IEC 61071:2007	Voltage between terminals, 1.5 V <sub>R</sub> , during 10 s Insulation resistance, R <sub>ins</sub> at V <sub>R</sub> if V <sub>R</sub> <500 V or 500 V if V <sub>R</sub> ≥500 V Capacitance, C at 1 kHz (room temperature) Dissipation factor, tan δ at 1/10 kHz (room temperature)	Within specified limits
Robustness of terminations (Type test)	IEC 60068-2-21:2006	Tensile strength (test Ua1) Wire diameter   Tensile force 0.5 <d <sub>1</sub> ≤0.8 mm   10 N 0.8 <d <sub>1</sub> ≤1.25 mm   20 N	Capacitance and tan δ within specified limits
Resistance to soldering heat (Type test)	IEC 60068-2-20:2008, test Tb, method 1A	Solder bath temperature at 260 ±5 °C, immersion for 10 seconds	ΔC/C <sub>0</sub>   ≤2%  Δ tan δ  ≤0.002
Rapid change of temperature (Type test)	IEC 60384-16:2005	T <sub>A</sub> = lower category temperature T <sub>B</sub> = upper category temperature Five cycles, duration t = 30 min	ΔC/C <sub>0</sub>   ≤2%  Δ tan δ  ≤0.002 R <sub>ins</sub> ≥50% of initial limit
Vibration (Type test)	IEC 60384-16:2005	Test F <sub>C</sub> : vibration sinusoidal Displacement: 0.75 mm Acceleration: 98 m/s <sup>2</sup> Frequency: 10 Hz ... 500 Hz Test duration: 3 orthogonal axes, 2 hours each axe	No visible damage

## Mounting guidelines

### 1 Soldering

#### 1.1 Solderability of leads

The solderability of terminal leads is tested to IEC 60068-2-20:2008, test Ta, method 1.

Before a solderability test is carried out, terminals are subjected to accelerated ageing (to IEC 60068-2-2:2007, test Ba: 4 h exposure to dry heat at 155 °C). Since the ageing temperature is far higher than the upper category temperature of the capacitors, the terminal wires should be cut off from the capacitor before the ageing procedure to prevent the solderability being impaired by the products of any capacitor decomposition that might occur.

Solder bath temperature	235 ±5 °C
Soldering time	2.0 ±0.5 s
Immersion depth	2.0 +0/–0.5 mm from capacitor body or seating plane
Evaluation criteria:	
Visual inspection	Wetting of wire surface by new solder ≥90%, free-flowing solder

#### 1.2 Resistance to soldering heat

Resistance to soldering heat is tested to IEC 60068-2-20:2008, test Tb, method 1. Conditions:

Series		Solder bath temperature	Soldering time
MKT	boxed (except 2.5 × 6.5 × 7.2 mm)	260 ±5 °C	10 ±1 s
	coated		
	uncoated (lead spacing >10 mm)		
MFP MKP	(lead spacing >7.5 mm)		
MKT	boxed (case 2.5 × 6.5 × 7.2 mm)		5 ±1 s
MKP	(lead spacing ≤7.5 mm)		<4 s
MKT	uncoated (lead spacing ≤10 mm)		recommended soldering profile for MKT uncoated (lead spacing ≤10 mm) and insulated (B32559)
MKT	insulated (B32559)		

Immersion depth	2.0 +0/-0.5 mm from capacitor body or seating plane
Shield	Heat-absorbing board, (1.5 ±0.5) mm thick, between capacitor body and liquid solder
Evaluation criteria:	
Visual inspection	No visible damage
$\Delta C/C_0$	2% for MKT/MKP/MFP 5% for EMI suppression capacitors
$\tan \delta$	As specified in sectional specification

### 1.3 General notes on soldering

Permissible heat exposure loads on film capacitors are primarily characterized by the upper category temperature  $T_{max}$ . Long exposure to temperatures above this type-related temperature limit can lead to changes in the plastic dielectric and thus change irreversibly a capacitor's electrical characteristics. For short exposures (as in practical soldering processes) the heat load (and thus the possible effects on a capacitor) will also depend on other factors like:

- Pre-heating temperature and time
- Forced cooling immediately after soldering
- Terminal characteristics:
  - diameter, length, thermal resistance, special configurations (e.g. crimping)
- Height of capacitor above solder bath
- Shadowing by neighboring components
- Additional heating due to heat dissipation by neighboring components
- Use of solder-resist coatings

Body temperature should follow the description below:

MKP capacitor

During pre-heating:  $T_p \leq 110 \text{ }^\circ\text{C}$

During soldering:  $T_s \leq 120 \text{ }^\circ\text{C}$ ,  $t_s \leq 45 \text{ s}$

MKT capacitor

During pre-heating:  $T_p \leq 125 \text{ }^\circ\text{C}$

During soldering:  $T_s \leq 160 \text{ }^\circ\text{C}$ ,  $t_s \leq 45 \text{ s}$

When SMD components are used together with leaded ones, the film capacitors should not pass into the SMD adhesive curing oven. The leaded components should be assembled after the SMD curing step.

Leaded film capacitors are not suitable for reflow soldering.

In order to ensure proper conditions for manual or selective soldering, the body temperature of the capacitor ( $T_s$ ) must be  $\leq 120 \text{ }^\circ\text{C}$ .

One recommended condition for manual soldering is that the tip of the soldering iron should be  $< 360 \text{ }^\circ\text{C}$  and the soldering contact time should be no longer than 3 seconds.

For uncoated MKT capacitors with lead spacings  $\leq 10 \text{ mm}$  (B32560/B32561) the following measures are recommended:

pre-heating to not more than  $110 \text{ }^\circ\text{C}$  in the preheater phase

rapid cooling after soldering

Please refer to our Film Capacitors Data Book in case more details are needed.

### Cautions and warnings

- Do not exceed the upper category temperature (UCT).
- Do not apply any mechanical stress to the capacitor terminals.
- Avoid any compressive, tensile or flexural stress.
- Do not move the capacitor after it has been soldered to the PC board.
- Do not pick up the PC board by the soldered capacitor.
- Do not place the capacitor on a PC board whose PTH hole spacing differs from the specified lead spacing.
- Do not exceed the specified time or temperature limits during soldering.
- Avoid external energy inputs, such as fire or electricity.
- Avoid overload of the capacitors.
- Consult us if application is with severe temperature and humidity condition.
- There are no serviceable or repairable parts inside the capacitor. Opening the capacitor or any attempts to open or repair the capacitor will void the warranty and liability of TDK Electronics.
- Please note that the standards referred to in this publication may have been revised in the meantime.

The table below summarizes the safety instructions that must always be observed. A detailed description can be found in the relevant sections of the chapters "General technical information" and "Mounting guidelines".

Topic	Safety information	Reference chapter "General technical information"
Storage conditions	Make sure that capacitors are stored within the specified range of time, temperature and humidity conditions.	4.5 "Storage conditions"
Flammability	Avoid external energy, such as fire or electricity (passive flammability), avoid overload of the capacitors (active flammability) and consider the flammability of materials.	5.3 "Flammability"
Resistance to vibration	Do not exceed the tested ability to withstand vibration. The capacitors are tested to IEC 60068-2-6:2007. TDK Electronics offers film capacitors specially designed for operation under more severe vibration regimes such as those found in automotive applications. Consult our catalog "Film Capacitors for Automotive Electronics".	5.2 "Resistance to vibration"
Soldering	Do not exceed the specified time or temperature limits during soldering.	1 "Soldering"
Cleaning	Use only suitable solvents for cleaning capacitors.	2 "Cleaning"
Embedding of capacitors in finished assemblies	When embedding finished circuit assemblies in plastic resins, chemical and thermal influences must be taken into account. Caution: Consult us first, if you also wish to embed other uncoated component types!	3 "Embedding of capacitors in finished assemblies"

**Display of ordering codes for TDK Electronics products**

The ordering code for one and the same product can be represented differently in data sheets, data books, other publications, on the company website, or in order-related documents such as shipping notes, order confirmations and product labels. The varying representations of the ordering codes are due to different processes employed and do not affect the specifications of the respective products.

Detailed information can be found on the Internet under [www.tdk-electronics.tdk.com/orderingcodes](http://www.tdk-electronics.tdk.com/orderingcodes).

**Correlation of data sheet values and modelling tool outputs**

Data sheet values and results of design tools may deviate as they have not been derived in the same context.

While data sheets show individual parameter statements without considering a possible dependency to other parameters. Tools model a complete given scenario as input and processed inside the tool.

Furthermore as we constantly strive to improve our models, the results of tools can change over time and be a non-binding indication only.

**Symbols and terms**

Symbol	English	German
$\alpha$	Heat transfer coefficient	Wärmeübergangszahl
$\alpha_C$	Temperature coefficient of capacitance	Temperaturkoeffizient der Kapazität
A	Capacitor surface area	Kondensatoroberfläche
$\beta_C$	Humidity coefficient of capacitance	Feuchtekoeffizient der Kapazität
C	Capacitance	Kapazität
$C_R$	Rated capacitance	Nennkapazität
$\Delta C$	Absolute capacitance change	Absolute Kapazitätsänderung
$\Delta C/C$	Relative capacitance change (relative deviation of actual value)	Relative Kapazitätsänderung (relative Abweichung vom Ist-Wert)
$\Delta C/C_R$	Capacitance tolerance (relative deviation from rated capacitance)	Kapazitätstoleranz (relative Abweichung vom Nennwert)
dt	Time differential	Differentielle Zeit
$\Delta t$	Time interval	Zeitintervall
$\Delta T$	Absolute temperature change (self-heating)	Absolute Temperaturänderung (Selbsterwärmung)
$\Delta \tan \delta$	Absolute change of dissipation factor	Absolute Änderung des Verlustfaktors
$\Delta V$	Absolute voltage change	Absolute Spannungsänderung
dV/dt	Time differential of voltage function (rate of voltage rise)	Differentielle Spannungsänderung (Spannungsflankensteilheit)
$\Delta V/\Delta t$	Voltage change per time interval	Spannungsänderung pro Zeitintervall
E	Activation energy for diffusion	Aktivierungsenergie zur Diffusion
ESL	Self-inductance	Eigeninduktivität
ESR	Equivalent series resistance	Ersatz-Serienwiderstand
f	Frequency	Frequenz
$f_1$	Frequency limit for reducing permissible AC voltage due to thermal limits	Grenzfrequenz für thermisch bedingte Reduzierung der zulässigen Wechsel- spannung
$f_2$	Frequency limit for reducing permissible AC voltage due to current limit	Grenzfrequenz für strombedingte Redu- zierung der zulässigen Wechselspannung
$f_r$	Resonant frequency	Resonanzfrequenz
$F_D$	Thermal acceleration factor for diffusion	Therm. Beschleunigungsfaktor zur Diffusion
$F_T$	Derating factor	Deratingfaktor
i	Current (peak)	Stromspitze
$I_C$	Category current (max. continuous current)	Kategoriestrom (max. Dauerstrom)
$I_{RMS}$	(Sinusoidal) alternating current, root-mean- square value	(Sinusförmiger) Wechselstrom
$i_z$	Capacitance drift	Inkonstanz der Kapazität
$k_0$	Pulse characteristic	Impulskenwert
$L_S$	Series inductance	Serieninduktivität
$\lambda$	Failure rate	Ausfallrate
$\lambda_0$	Constant failure rate during useful service life	Konstante Ausfallrate in der Nutzungsphase

Symbol	English	German
$\lambda_{\text{test}}$	Failure rate, determined by tests	Experimentell ermittelte Ausfallrate
$P_{\text{diss}}$	Dissipated power	Abgegebene Verlustleistung
$P_{\text{gen}}$	Generated power	Erzeugte Verlustleistung
Q	Heat energy	Wärmeenergie
$\rho$	Density of water vapor in air	Dichte von Wasserdampf in Luft
R	Universal molar constant for gases	Allg. Molarkonstante für Gas
R	Ohmic resistance of discharge circuit	Ohmscher Widerstand des Entladekreises
$R_i$	Internal resistance	Innenwiderstand
$R_{\text{ins}}$	Insulation resistance	Isolationswiderstand
$R_P$	Parallel resistance	Parallelwiderstand
$R_S$	Series resistance	Serienwiderstand
S	severity (humidity test)	Schärfegrad (Feuchtetest)
t	Time	Zeit
T	Temperature	Temperatur
$\tau$	Time constant	Zeitkonstante
$\tan \delta$	Dissipation factor	Verlustfaktor
$\tan \delta_D$	Dielectric component of dissipation factor	Dielektrischer Anteil des Verlustfaktors
$\tan \delta_P$	Parallel component of dissipation factor	Parallelanteil des Verlustfaktors
$\tan \delta_S$	Series component of dissipation factor	Serienanteil des Verlustfaktors
$T_A$	Temperature of the air surrounding the component	Temperatur der Luft, die das Bauteil umgibt
$T_{\text{max}}$	Upper category temperature	Obere Kategorietemperatur
$T_{\text{min}}$	Lower category temperature	Untere Kategorietemperatur
$t_{\text{OL}}$	Operating life at operating temperature and voltage	Betriebszeit bei Betriebstemperatur und -spannung
$T_{\text{op}}$	Operating temperature, $T_A + \Delta T$	Betriebstemperatur, $T_A + \Delta T$
$T_R$	Rated temperature	Nenntemperatur
$T_{\text{ref}}$	Reference temperature	Referenztemperatur
$t_{\text{SL}}$	Reference service life	Referenz-Lebensdauer
$V_{\text{AC}}$	AC voltage	Wechselspannung
$V_C$	Category voltage	Kategoriespannung
$V_{\text{C,RMS}}$	Category AC voltage	(Sinusförmige) Kategorie-Wechselspannung
$V_{\text{CD}}$	Corona-discharge onset voltage	Teilentlade-Einsatzspannung
$V_{\text{ch}}$	Charging voltage	Ladespannung
$V_{\text{DC}}$	DC voltage	Gleichspannung
$V_{\text{FB}}$	Fly-back capacitor voltage	Spannung (Flyback)
$V_i$	Input voltage	Eingangsspannung
$V_o$	Output voltage	Ausgangssspannung
$V_{\text{op}}$	Operating voltage	Betriebsspannung
$V_p$	Peak pulse voltage	Impuls-Spitzenspannung
$V_{\text{pp}}$	Peak-to-peak voltage Impedance	Spannungshub

Symbol	English	German
$V_R$	Rated voltage	Nennspannung
$\hat{V}_R$	Amplitude of rated AC voltage	Amplitude der Nenn-Wechselspannung
$V_{RMS}$	(Sinusoidal) alternating voltage, root-mean-square value	(Sinusförmige) Wechselspannung
$V_{SC}$	S-correction voltage	Spannung bei Anwendung "S-correction"
$V_{sn}$	Snubber capacitor voltage	Spannung bei Anwendung "Beschaltung"
$Z$	Impedance	Scheinwiderstand
$e$	Lead spacing	Rastermaß

## Important notes

The following applies to all products named in this publication:

1. Some parts of this publication contain **statements about the suitability of our products for certain areas of application**. These statements are based on our knowledge of typical requirements that are often placed on our products in the areas of application concerned. We nevertheless expressly point out **that such statements cannot be regarded as binding statements about the suitability of our products for a particular customer application**. As a rule, we are either unfamiliar with individual customer applications or less familiar with them than the customers themselves. For these reasons, it is always ultimately incumbent on the customer to check and decide whether a product with the properties described in the product specification is suitable for use in a particular customer application.
2. We also point out that **in individual cases, a malfunction of electronic components or failure before the end of their usual service life cannot be completely ruled out in the current state of the art, even if they are operated as specified**. In customer applications requiring a very high level of operational safety and especially in customer applications in which the malfunction or failure of an electronic component could endanger human life or health (e.g. in accident prevention or life-saving systems), it must therefore be ensured by means of suitable design of the customer application or other action taken by the customer (e.g. installation of protective circuitry or redundancy) that no injury or damage is sustained by third parties in the event of malfunction or failure of an electronic component.
3. **The warnings, cautions and product-specific notes must be observed.**
4. In order to satisfy certain technical requirements, **some of the products described in this publication may contain substances subject to restrictions in certain jurisdictions (e.g. because they are classed as hazardous)**. Useful information on this will be found in our Material Data Sheets on the Internet ([www.tdk-electronics.tdk.com/material](http://www.tdk-electronics.tdk.com/material)). Should you have any more detailed questions, please contact our sales offices.
5. We constantly strive to improve our products. Consequently, **the products described in this publication may change from time to time**. The same is true of the corresponding product specifications. Please check therefore to what extent product descriptions and specifications contained in this publication are still applicable before or when you place an order.  
We also **reserve the right to discontinue production and delivery of products**. Consequently, we cannot guarantee that all products named in this publication will always be available. The aforementioned does not apply in the case of individual agreements deviating from the foregoing for customer-specific products.
6. Unless otherwise agreed in individual contracts, **all orders are subject to our General Terms and Conditions of Supply**.

## Important notes

7. **Our manufacturing sites serving the automotive business apply the IATF 16949 standard.**  
The IATF certifications confirm our compliance with requirements regarding the quality management system in the automotive industry. Referring to customer requirements and customer specific requirements (“CSR”) TDK always has and will continue to have the policy of respecting individual agreements. Even if IATF 16949 may appear to support the acceptance of unilateral requirements, we hereby like to emphasize that **only requirements mutually agreed upon can and will be implemented in our Quality Management System.** For clarification purposes we like to point out that obligations from IATF 16949 shall only become legally binding if individually agreed upon.
8. The trade names EPCOS, CarXield, CeraCharge, CeraDiode, CeraLink, CeraPad, CeraPlas, CSMP, CTVS, DeltaCap, DigiSiMic, ExoCore, FilterCap, FormFit, InsuGate, LeaXield, MiniBlue, MiniCell, MKD, MKK, ModCap, MotorCap, PCC, PhaseCap, PhaseCube, PhaseMod, PhiCap, PowerHap, PQSine, PQvar, SIFERRIT, SIFI, SIKOREL, SilverCap, SIMDAD, SiMic, SIMID, SineFormer, SIOV, ThermoFuse, WindCap, XieldCap are **trademarks registered or pending** in Europe and in other countries. Further information will be found on the Internet at [www.tdk-electronics.tdk.com/trademarks](http://www.tdk-electronics.tdk.com/trademarks).

Release 2022-07
