PRODUCT CHANGE NOTIFICATION INDUCTIVE COMPONENTS

Lead Wire Material Changes to Axial Lead Inductors Model 8230, 8250 and 9250A Series

Riverside, California – June 13, 2019 (REVISED JUNE 19, 2019) – In the spirit of continuous improvement, effective October 20, 2019, Bourns is changing the inductor lead material for the listed Models from a hard copper alloy to a soft copper alloy. When the inductor lead is being formed for PCB insertion, a rigid lead can transfer a higher level of stress to the inductor interior potentially causing a failure of the solder joint connection. A soft lead will help reduce the probability of a solder joint connection failure.

The function and process of the inductors will change due to the soft copper lead material improvement. There will be no change to the form and fit. The quality and reliability of the inductors will be improved.

Affected part numbers are shown on the following pages. Part numbers with strikethroughs are not affected by this product change notification.

Implementation dates are as follows:

Date that manufacturing of existing products will cease: October 19, 2019 Date that deliveries of modified products will begin: October 20, 2019 First date code using the above changes: 1943

If you have any questions or need additional information, please feel free to contact Customer Service/Inside Sales.

Users should verify that the described changes will not impact the performance of the product in their specific applications.

IC1948 REV
