## 9FG1902AKLFT

**Category:**
**Generic Part:** 9FG1902

**Market Group:** PC CLOCK

**Description:** PCIE BUFFER

CPU Host Bus, PCI Express and Fully-Buffered DIMM clocking. The ICS9FG1902 follows the Intel DB1900G Differential Buffer Specification, except for the power up default state. This buffer provides 19 output clocks for CPU Host Bus, PCI-Express, or Fully Buffered DIMM applications. The outputs are configured with two groups. Both groups (DIF 16:0) and (DIF 18:17) can be equal to or have a gear ratio to the input clock. The ICS9FG1902 power up default differs from the ICS9FG1901. The ICS9FG1902 powers up with DIF(16:0) at 1/2 the input frequency, when FS\_A\_410 = 0 (input frequency >= 200 MHz). A differential CPU clock from a CK410 or CK410B main clock generator, such as the ICS954101 or ICS932S401, drives the ICS9FG1902. The ICS9FG1902 can provide outputs up to 400MHz.
