1. SCOPE OF THIS DOCUMENT

This product specification applies to Panasonic's HCI, class 2, Bluetooth®¹ module, series number: PAN1315. Different versions of the PAN1315 are available (refer to chapter 21 Ordering Information).

The Bluetooth chip used is the CC2560 from Texas Instruments (www.ti.com).

2. KEY FEATURES

- Bluetooth specification v2.1 + EDR (Enhanced Data Rate)
- Surface mount type 6.5 x 9.0 x 1.8 mm³
- 10dBm Tx power (typical) with transmit power control
- High sensitivity (-91 dBm typ.)
- Optional EEPROM for increased operating temperature range and decreased start up time
- Texas Instrument's CC2560 BlueLink 7.0 inside
- Complete Co-location and Co-existence with IEEE 802.11 (AWMA, AFH and SFH)
- Fast Connection Setup
- Extended SCO Link
- Supports convenient direct connection to battery (2.2-4.8 V), or connect to DC/DC (1.7-1.98 V) for improved power efficiency
- Internal crystal oscillator (26MHz)
- Built-in shielding to be compliant to FCC
- Full Bluetooth data rate up to 2178kbps asymmetric
- Support for all Bluetooth power saving modes (Sniff, Hold)
- Support for very low-power modes (deep sleep and power down)
- Optional support for ultra-low-power mode. Standby with Battery-Backup
- PCM Interface Master / Slave supporting 13 or 16 bit linear, 8 bit µ-law or A-law Codecs and CVSD encoders on up to 3 SCO channels
- ROM based firmware with patch trap mechanism and reserved RAM, enables easy bug fixes and new firmware features to be added through external script.
- Full 8- to 128-bit encryption
- UART, I²C, PCM and SPI Interface
- 2 GPIO's for defined usage
- IO operating voltage = 1.8 V nominal
- 3 Channel ADC and 1 Channel DAC
- Bluetooth profiles such as SPP, HDP are available. Refer to Panasonic's RF module website for a listing of the most current releases.
- Manufactured in conformance with RoHS

4. DESCRIPTION FOR THE MODULE

The PAN1315 is a short-range class 2 HCI module for implementing Bluetooth functionality into various electronic devices. A block diagram can be found in chapter 7.

Communication between the module and the host controller is carried out normally via UART, but also SPI is supported with this hardware.

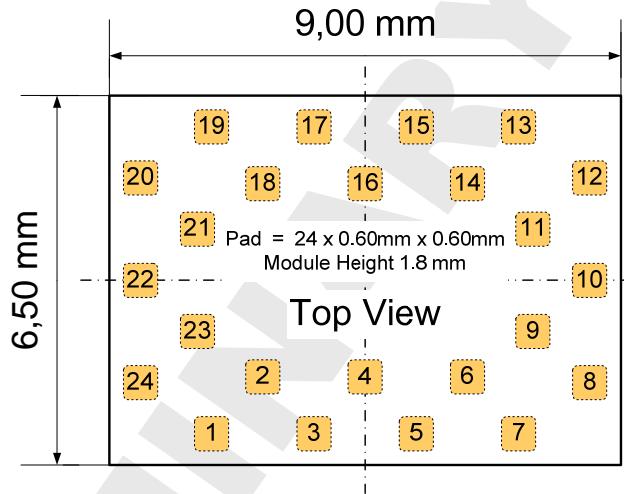

The main software solutions are available from Mindtree Ltd. Please refer to chapter 3. These software packages are based on TI's MSP430 platform .

Please contact your local sales office for further details on additional options and services, by visiting www.panasonic.com/rfmodules or write an e-mail to wireless@eu.panasonic.com.

5.3. DEVICE POWER SUPPLY

The CC2560 single chip Bluetooth radio solution is intended to work in devices with a limited power budget such as cellular phones, headsets, hand-held PC's and other battery-operated devices. One of the main differentiators of the CC2560 is its power management – its ability to draw as little current as possible.

The PAN1315 device requires two kinds of power sources:

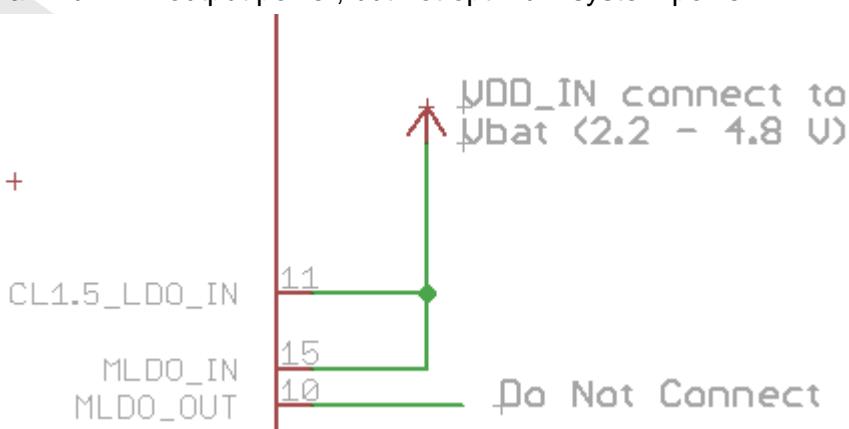

- Main power supply for the Bluetooth - VDD_IN = V_{BAT}
- Power source for the 1.8 V I/O ring - VDD_IO

The PAN1315 includes several on-chip voltage regulators for increased noise immunity. The PAN1315 can be connected either directly to the battery or to an external 1.8-V DC to DC converter.

There are three ways to supply power:

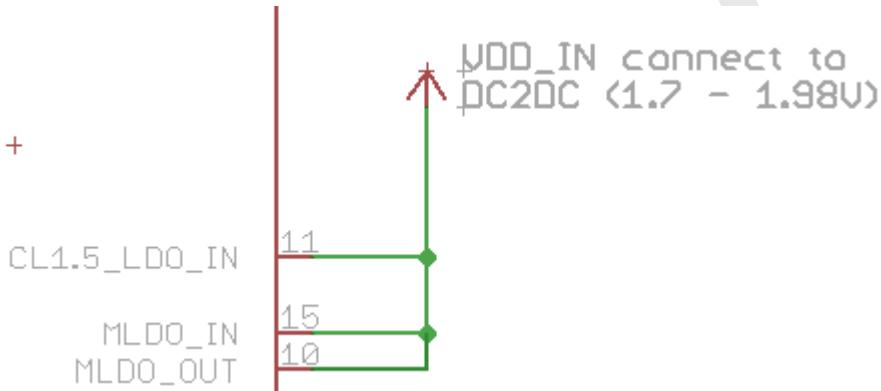

- Full-V_{BAT} system:

Maximum RF output power, but not optimum system power:

CUSTOMER'S CODE PAN1315	PANASONIC'S CODE ENW89818C2JF	DATE Datum	21.04.2009

- Full-DC2DC system:
Lower RF output power, but optimum system power:

- Mixed DC2DC-V_{BAT} system:
Maximum RF output power and optimum system power, but requires routing of V_{BAT}:

5.4. CLOCK INPUTS

The slow clock is always supplied from an external source. It is connected to the SLOW_CLK_IN pin number 8 and can be a digital signal with peak to peak of 0-1.8 V.

The slow clock's frequency accuracy must be 32.768 kHz ± 250 ppm for Bluetooth usage (according to the Bluetooth specification).

6. BLUETOOTH FEATURES

- Support of Bluetooth2.1+EDR (Lisbon Release) up to HCI level.
- Very fast AFH algorithm for both ACL and eSCO.
- Supports typically 4 dBm Class 2 TX power w/o external PA, improving Bluetooth link robustness. The TX power can be raised up to 10 dBm depending on the host settings.
- Supports multiple Bluetooth profiles with enhanced QoS, both mono and stereo, assisted A2DP (no host processing required).
- Digital Radio Processor (DRP) single-ended 50 Ohm.
- Spurious emissions compatible with GPS applications.
- Internal temperature detection and compensation ensures minimal variation in the RF performance over temperature.
- Flexible PCM and I2S digital audio/voice interfaces: Full flexibility of data-format (Linear, a-Law, μ -Law), data-width, data order, sampling and slot positioning, master/slave modes, high clock rates up to 15 MHz for slave mode (or 4.096 MHz for Master Mode). Lost packet concealment for improved audio.
- Proprietary low-power scan method for page and inquiry scans, achieves page and inquiry scans at 1/3rd normal power.
- On board SBC decoder/encoder – offloads host for A2DP and WideBand speech processing. A2DP host burst mode, enhanced dynamic bit pool algorithm.

7. BLOCK DIAGRAM

The EEPROM could be used to store some calibration value for the 26 MHz crystal at room temperature, so the max. operating temperature could be increase to +85°C.

In addition, the start up time could be decrease, as the patch can be loaded from the EEPROM, more details will be available in the next revision.

Note: The Slow Clock 32.768 kHz is mandatory, otherwise the module does not start up, please refer to chapter 5.4.

8. TEST CONDITIONS

Measurements shall be made under room temperature and humidity unless otherwise specified.

Temperature $25 \pm 10^\circ\text{C}$

Humidity 40 to 85%RH

SW-Patch V2.30

Supply Voltage 3.3V

Actual values are given based on TI datasheet, in the final version it could be adjusted after the final measurements on the Panasonic PAN1315ETU (**Easy To Use**) test board, unless otherwise indicated.

All specifications are over temperature and process, unless indicated otherwise.

9.1. ABSOLUTE MAXIMUM RATINGS

Over operating free-air temperature range (unless otherwise noted).

Note

All parameters are measured as follows unless stated otherwise:

$$\text{VDD_IN}^9 = 3.3 \text{ V}, \text{VDD_IO} = 1.8 \text{ V}.$$

No	See ¹⁰	Value	Unit
Ratings Over Operating Free-Air Temperature Range			
1	VDD_IN	Supply voltage range	-0.5 to 5.5 V ¹¹
2	VDDIO_1.8V		-0.5 to 2.145 V
3	Input voltage to RF (Pin 13)		-0.5 to 2.1 V
4	Operating ambient temperature range	-20 to 70 °C	
5	Storage temperature range	-40 to 125 °C	
6	Bluetooth RF inputs (Pin 13)	10 dBm	

9.2. RECOMMENDED OPERATING CONDITIONS

No	Rating	Condition	Symbol	Min	Max	Unit
1	Power supply voltage ¹²		VDD_IN	1.7	4.8	V
2	IO power supply voltage		VDD_IO	1.62	1.92	V
3	High-level input voltage	Default	V _{IH}	0.65 x VDD_IO	VDD_IO	V

⁹ VDD_IN is supplied to MLDO_IN (Pin 15) and CL1.5_LDO_IN (Pin 11), other options are described in chapter 5.3 Device Power Supply.

¹⁰ Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

¹¹ Maximum allowed depends on accumulated time at that voltage: VDD_IN is defined in Reference schematics. When DC2DC supply is used, maximum voltage into MLDO_OUT and FM_LDO_IN = 2.145 V.

¹² Excluding 1.98 < VDD_IN < 2.2 V range – not allowed.

16. RECOMMENDED FOOT PATTERN

Dimensions in mm.

In comparison to the module we recommend to use 50 µm bigger pad size to each direction

The land pattern dimensions above are meant to serve only as a guide. This information is provided without any legal liability.

For the footprint, it is recommended to incorporate a 50µm bigger size for the pads in each direction compared to the module footprint. Please refer to chapter 17, Foot Print of the Module.

For the solder paste screen, use the same screen for the module. Solder paste screen cutouts (with slightly different dimensions) might be optimum depending on your soldering process. For example, the solder paste screen thickness chosen might have an effect. The solder screen thickness depends on your production standard -- 120µm to 150µm is recommended.

IMPORTANT:

Although the bottom side of PAN1315 is fully coated, no copper such as through hole vias, planes or tracks on the board component layer should be located below the PAN1315 to avoid creating a short. In cases where a track or through hole via has to be located under the module, please make a note that it has to be kept away from PAN1315 bottom pads. The PAN1315 multilayer pcb contains an inner RF shielding plane, therefore no pcb shielding plane below the module is needed.

When using an onboard ceramic antenna, please place the antenna on the edge of your carrier board (if allowable).

If you have any questions on these points, please contact your local Panasonic representative.

Before releasing the layout, we recommend to sent the schematic and layout for final check to wireless@eu.panasonic.com.

19. CAUTIONS

Failure to follow the guidelines set forth in this document may result in degrading of the product's functions and damage to the product.

19.1. DESIGN NOTES

- (1) Please follow the conditions written in this specification, especially the control signals of this module.
- (2) The supply voltage has to be free of AC ripple voltage (for example from a battery or a low noise regulator output). For noisy supply voltages, provide a decoupling circuit (for example a ferrite in series connection and a bypass capacitor to ground of at least 47uF directly at the module).
- (3) This product should not be mechanically stressed when installed.
- (4) Keep this product away from heat. Heat is the major cause of decreasing the life of these products.
- (5) Avoid assembly and use of the target equipment in conditions where the products' temperature may exceed the maximum tolerance.
- (6) The supply voltage should not be exceedingly high or reversed. It should not carry noise and/or spikes.
- (7) Keep this product away from other high frequency circuits.

19.2. INSTALLATION NOTES

- (1) Reflow soldering is possible twice based on the conditions in chapter 15. Set up the temperature at the soldering portion of this product according to this reflow profile.
- (2) Carefully position the products so that their heat will not burn into printed circuit boards or affect the other components that are susceptible to heat.
- (3) Carefully locate these products so that their temperatures will not increase

CLASSIFICATION Einstufung	PRODUCT SPECIFICATION Produktspezifikation	No. DS-1315-2400-102	REV. 0.98

- due to the effects of heat generated by neighboring components.
- (4) If a vinyl-covered wire comes into contact with the products, then the cover will melt and generate toxic gas, damaging the insulation. Never allow contact between the cover and these products to occur.
 - (5) This product should not be mechanically stressed or vibrated when reflowed.
 - (6) If you want to repair your board by hand soldering, please keep the conditions of this chapter.
 - (7) Do not wash this product.
 - (8) Refer to the recommended pattern when designing a board.
 - (9) Pressing on parts of the metal cover or fastening objects to the metal will cause damage to the unit.

19.3. USAGE CONDITIONS NOTES

- (1) Take measures to protect the unit against static electricity.
If pulses or other transient loads (a large load applied in a short time) are applied to the products, check and evaluate their operation before assembly on the final products.
- (2) Do not use dropped products.
- (3) Do not touch, damage or soil the pins.
- (4) Follow the recommended condition ratings about the power supply applied to this product.
- (5) Electrode peeling strength: Do not add pressure of more than 4.9N when soldered on PCB.
- (6) Pressing on parts of the metal cover or fastening objects to the metal cover will cause damage.
- (7) These products are intended for general purpose and standard use in general electronic equipment, such as home appliances, office equipment, information and communication equipment.

19.4. STORAGE NOTES

- (1) The module should not be stressed mechanically during storage.
- (2) Do not store these products in the following conditions or the performance characteristics of the product, such as RF performance will be adversely affected:
 - Storage in salty air or in an environment with a high concentration of corrosive gas, such as Cl₂, H₂S, NH₃, SO₂, or NO_x
 - Storage in direct sunlight
 - Storage in an environment where the temperature may be outside the range of 5°C to 35°C range, or where the humidity may be outside the 45 to 85% range.
 - Storage of the products for more than one year after the date of delivery
Storage period: Please check the adhesive strength of the embossed tape and soldering after 6 months of storage.
- (3) Keep this product away from water, poisonous gas and corrosive gas.
- (4) This product should not be stressed or shocked when transported.
- (5) Follow the specification when stacking packed crates (max. 10).

19.5. SAFETY CAUTIONS

These specifications are intended to preserve the quality assurance of products and individual components.

Before use, check and evaluate the operation when mounted on your products. Abide by these specifications, without deviation when using the products. These products may short-circuit. If electrical shocks, smoke, fire, and/or accidents involving human life are anticipated when a short circuit occurs, then provide the following failsafe functions, as a minimum.

- (1) Ensure the safety of the whole system by installing a protection circuit and a protection device.
- (2) Ensure the safety of the whole system by installing a redundant circuit or another system to prevent a single fault causing an unsafe status.

19.6. OTHER CAUTIONS

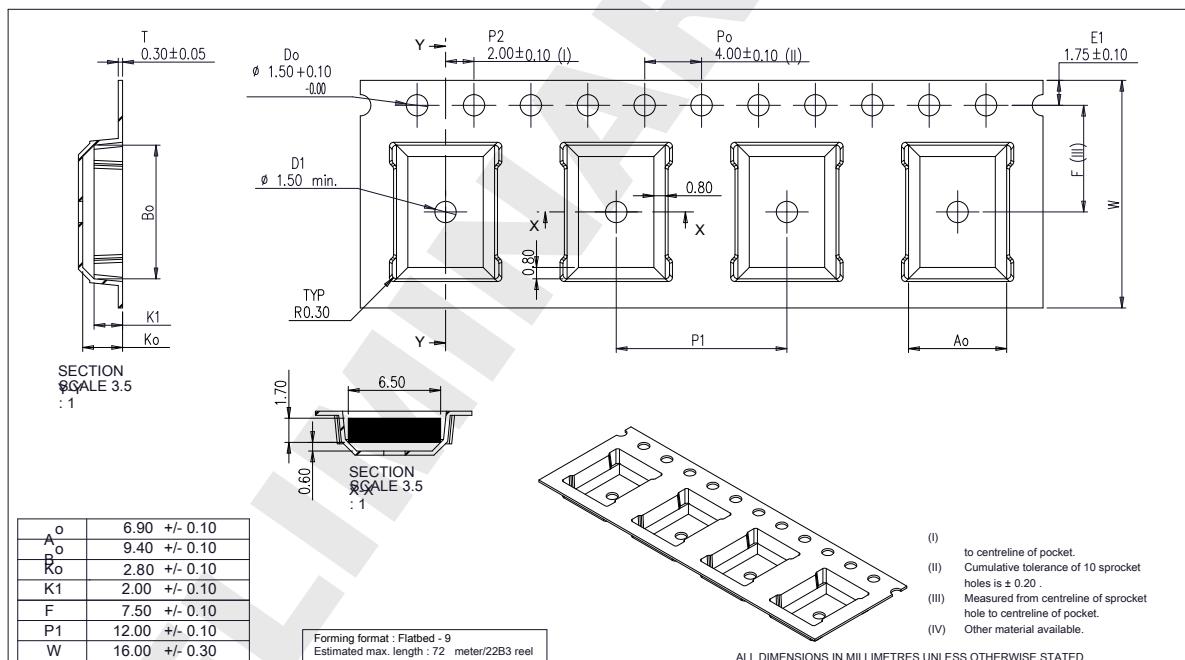

- (1) This specification sheet is copyrighted. Please do not disclose it to a third party.
- (2) Please do not use the products for other purposes than those listed.
- (3) Be sure to provide an appropriate fail-safe function on your product to prevent an additional damage that may be caused by the abnormal function or the failure of the product.
- (4) This product has been manufactured without any ozone chemical controlled under the Montreal Protocol.
- (5) These products are not intended for other uses, other than under the special conditions shown below. Before using these products under such special conditions, check their performance and reliability under the said special conditions carefully to determine whether or not they can be used in such a manner.
 - In liquid, such as water, salt water, oil, alkali, or organic solvent, or in places where liquid may splash.
 - In direct sunlight, outdoors, or in a dusty environment
 - In an environment where condensation occurs.
 - In an environment with a high concentration of harmful gas (e.g. salty air, HCl, Cl₂, SO₂, H₂S, NH₃, and NO_x)
- (6) If an abnormal voltage is applied due to a problem occurring in other components or circuits, replace these products with new products because they may not be able to provide normal performance even if their electronic characteristics and appearances appear satisfactory.
- (7) When you have any question or uncertainty, contact Panasonic.

21. ORDERING INFORMATION

Ordering part number	Description	MOQ ⁽¹⁾
ENW89818C2JF ⁽²⁾	PAN1315 CLASS 2 Bluetooth HCI Module (Standard 2.1), without EEPROM ⁽⁴⁾ , without ceramic antenna, 50 Ω bottom pad, operating temperature 70°C.	1500
ENW89818A2JF ⁽³⁾	PAN1315 CLASS 2 Bluetooth HCI Module (Standard 2.1), without EEPROM ⁽⁴⁾ , with ceramic antenna, operating temperature 70°C.	1500

Notes:

- (1) Abbreviation for Minimum Order Quantity (MOQ). The standard MOQ for mass production are 1500 pieces, fewer only on customer demand. Samples for evaluation can be delivered at any quantity.
- (2) Samples available
- (3) Samples will be available on customer demand
- (4) The version with EEPROM could be address up to +85°C, as the frequency offset could be stored in the EEPROM. As this is an HCI module, the host must be able to control these function.

22. ROHS DECLARATION

Declaration of environmental compatibility for supplied products:

Hereby we declare to our best present knowledge based on declaration of our suppliers that this product do not contain by now the following substances which are banned by Directive 2002/95/EC (RoHS) or if contain a maximum concentration of 0,1% by weight in homogeneous materials for

- Lead and lead compounds
- Mercury and mercury compounds
- Chromium (VI)
- PBB (polybrominated biphenyl) category
- PBDE (polybrominated biphenyl ether) category

And a maximum concentration of 0,01% by weight in homogeneous materials for

- Cadmium and cadmium compounds

23. DATA SHEET STATUS

This data sheet contains preliminary product specification. Panasonic reserves the right to change the specification without notice.

Preliminary product specification means also that the hardware has the engineering sample (ES) status.

Please consult the most recently issued data sheet before initiating or completing a design.

This product description does not lodge the claim to be complete and free of mistakes.
Please contact the related product manager in every case.

If we deliver ES samples to the customer, these samples have the status Engineering Samples. This means, the design of this product is not yet concluded. Engineering Samples may be partially or fully functional, and there may be differences to be published Data Sheet.

Engineering Samples are not qualified and are not to be used for reliability testing or series production.

Disclaimer:

Customer acknowledges that samples may deviate from the Data Sheet and may bear defects due to their status of development and the lack of qualification mentioned above.

Panasonic rejects any liability or product warranty for Engineering Samples. In particular, Panasonic disclaims liability for damages caused by

- the use of the Engineering Sample other than for Evaluation Purposes, particularly the installation or integration in an other product to be sold by Customer,
- deviation or lapse in function of Engineering Sample,
- improper use of Engineering Samples.

Panasonic disclaims any liability for consequential and incidental damages.

In case of any questions, please contact your local sales partner or the related product manager.

27. REGULATORY INFORMATION

27.1. FCC WARNING

This equipment is intended for use in a laboratory test environment only. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to subpart J of part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment in other environments may cause interference with radio communications, in which case the user at his own expense will be required to take whatever measures may be required to correct this interference.

28. LIFE SUPPORT POLICY

This Panasonic product is not designed for use in life support appliances, devices, or systems where malfunction can reasonably be expected to result in a significant personal injury to the user, or as a critical component in any life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness. Panasonic customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Panasonic for any damages resulting.
