

PC98 Non Silicone Thermal Interface Material

Version 1.131017

Non Silicone Thermal Interface Material

PC98 is a white, highly filled non-silicone system suitable for thermal dissipation of electronic devices. It has stable pot life and long shelf life even at room temperature of 25° C.

Features

Unique, non-silicone formulation No out-gassing Thermal conductivity 5 W/mK Hardness of 40 (Shore 00) Range of thicknesses available Can be cut to custom shapes

Applications

Heat dissipation from electronic components. Cooling of consumer electronics Automotive electronics Hard drives LED lighting systems

Properties

🗸 RÉACH Compliant

ROHS Compliant

Guidelines for Use

- 1. Wear rubber gloves when handling the product.
- 2. Place the product onto the required electronic part and circuit.
- 3. No heating or curing is required.

4. The product can be applied and removed easily. Care must be taken during installation to avoid tearing.

Storage

Store this non-silicone thermal interface material in an air tight container in a cool (20°C to 30°C), dark place to prolong shelf life. Avoid contact with moisture.
