

**Slim and high capacity  
up to 3.6A  
Voltage-driven type**

**PhotoMOS®  
Power 1 Form A  
Voltage-sensitive (AQZ10OD, 20OD)**

### FEATURES

**RoHS compliant**

#### 1. A voltage-sensitive power PhotoMOS

Conventional power PhotoMOS are connected externally to an input limiting resistor in order to obtain the appropriate LED current. Adding an internal constant-current element renders the input limiting resistor unnecessary, making it possible for the PhotoMOS to be voltage-driven.

#### 2. Wide range of input voltages

Allows a wide range of input voltages from 4 to 30 V DC. The PhotoMOS can be used in 5 V, 12 V or 24 V DC systems.

#### 3. Both AC/DC dual types and DC-only types available

The AC/DC dual type is capable of bi-directional control, and unlike conventional SSRs, does not have to be used differently depending on the load. The DC-only type is well suited for control of DC solenoids and DC motors.

#### 4. High capacity

Supports the various types of load control, from very small loads to a max. 2.7 A for the AC/DC dual type, max. 3.6 A for the DC-only type.

#### 5. High sensitivity and low on-resistance

Max. 3.6 A load can be controlled with the min. input voltage of 4 V DC. The on-resistance is also low at typ. 0.033 Ω (AQZ102D).

#### 6. Slim SIL4-pin package

(W) 3.5 × (D) 21.0 × (H) 12.5 mm  
(W) .138 × (D) .827 × (H) .492 inch

The compact size of the 4-pin SIL package allows high density mounting.
