### 3.0 Introduction

PL-2303HX provides a convenient solution for connecting an RS232-like full-duplex asynchronous serial device to any Universal Serial Bus (USB) capable host. PL-2303HX highly compatible drivers could simulate the traditional COM port on most operating systems allowing the existing applications based on COM port to easily migrate and be made USB ready.

By taking advantage of USB bulk transfer mode, large data buffers, and automatic flow control, PL-2303HX is capable of achieving higher throughput compared to traditional UART (Universal Asynchronous Receiver Transmitter) ports. When real RS232 signaling is not required, baud rate higher than 115200 bps could be used for even higher performance. The flexible baud rate generator of PL-2303HX could be programmed to generate any rate between 75 bps to 12M bps.

PL-2303HX is exclusively designed for mobile and embedded solutions in mind, providing a small footprint that could easily fit in to any connectors and handheld devices. With very small power consumption in either operating or suspend mode, PL-2303HX is perfect for bus powered operation with plenty of power left for the attached devices. Flexible signal level requirement on the RS232-like serial port side also allows PL-2303HX to connect directly to any 3.3V~1.8V range devices.

**Warning:** The exposed center die pad of the PL-2303HX QFN package is connected (bonded) to the pin VO\_33 so it is very important to design the PCB layout wherein this exposed die pad won't get grounded on the PCB when mounted.

## 6.0 USB Standard Descriptors

PL-2303HX supports one configuration with one interface and four endpoints. The descriptors are basically stored in an internal hardware ROM. However, some fields could be optionally modified by properly programmed on-chip OTPROM. The contents of all descriptors are shown in the following sections and the format of OTPROM would be given in later chapter.

### 6.1 Device Descriptor

Table 6-1 Device Descriptor

Offset	Field	Size	Value	Description
0	<i>bLength</i>	Byte	12h	Size of this descriptor (in bytes)
1	<i>bDescriptorType</i>	Byte	01h	DEVICE descriptor type
2	<i>bcdUSB</i>	Word	0110h	USB Specification Release Number 1.1
4	<i>bDeviceClass</i>	Byte	00h	
5	<i>bDeviceSubClass</i>	Byte	00h	
6	<i>bDeviceProtocol</i>	Byte	00h	
7	<i>bMaxPacketSize0</i>	Byte	40h	Maximum packet size for endpoint zero is 64
8	<i>idVendor</i>	Word	067Bh	Vender ID <sup>(1)</sup>
10	<i>idProduct</i>	Word	2303h	Product ID <sup>(1)</sup>
12	<i>bcdDevice</i>	Word	0400h	Device Release Number <sup>(1)</sup>
14	<i>iManufacturer</i>	Byte	01h	Manufacturer string descriptor index
15	<i>iProduct</i>	Byte	02h	Product name string descriptor index
16	<i>iSerialNumber</i>	Byte	00h/03h	Serial number string descriptor index <sup>(2)</sup>
17	<i>bNumConfigurations</i>	Byte	01h	One configuration.

**Notes:**

- (1) – The Vender ID, Product ID, and Device Release Number could be replaced by the contents of the on-chip OTPROM.
- (2) – The serial number string descriptor index could be defined by the contents of the on-chip OTPROM. If specified, the index will be 3 instead of 0.

### 6.2 Configuration Descriptor

Table 6-2 Configuration Descriptor

Offset	Field	Size	Value	Description
0	<i>bLength</i>	Byte	09h	Size of this descriptor (in bytes)
1	<i>bDescriptorType</i>	Byte	02h	CONFIGURATION descriptor type
2	<i>wTotalLength</i>	Word	0027h	Total length of data returned for this configuration.
4	<i>bNumInterface</i>	Byte	01h	One interface for this device.
5	<i>bConfigurationValue</i>	Byte	01h	
6	<i>iConfiguration</i>	Byte	00h	
7	<i>bmAttributes</i>	Byte	A0h/80h	Characteristic attributes <sup>(3)</sup>
8	<i>MaxPower</i>	Byte	32h/FAh	Maximum power consumption <sup>(4)</sup>

**Notes:**

- (3) – The Remote Wakeup attribute (bit 5) depends on the settings of the Remote Wakeup Enable (bit 0 to 4 of Device

Configuration Register 2). If all remote wakeup sources are disabled, the bmAttributes will be 80h. Otherwise, A0h is returned to indicate that this device is Remote Wakeup capable.

- (4) – The value of maximum power consumption depends on the LD\_MODE (bit 5 of Device Configuration Register 2) parameter. If it is set to 1, the MaxPower byte will be FAh for it requires 500mA from the system. Otherwise, it is 32h that indicates 100mA required.

### 6.3 Interface Descriptor

**Table 6-3 Interface Descriptor**

Offset	Field	Size	Value	Description
0	<i>BLength</i>	Byte	09h	Size of this descriptor (in bytes)

## 6.7 String Descriptors

PL-2303HX supports four string descriptors:

- Language ID
- Manufacturer
- Product
- Serial Number

Except for Serial Number, the other three string descriptors are stored in the internal Mask ROM, i.e. their contents are fixed. The Serial Number is a special case. If the on-chip OTPROM is not properly programmed, then the Serial Number would be hidden from the system. If the on-chip OTPROM is properly programmed, then the Serial Number will be read from the on-chip OTPROM.

The following tables demonstrate the current defined value for each descriptor:

### 6.7.1 String Descriptor 0 – Language ID

**Table 6-7a String Descriptor – Language ID**

Offset	Field	Size	Value	Description
0	<i>bLength</i>	Byte	04h	Size of this descriptor (in bytes)
1	<i>bDescriptorType</i>	Byte	03h	STRING descriptor type
2	<i>bLANGID[0]</i>	Word	0409h	English (United States)

### 6.7.2 String Descriptor 1 – Manufacturer

**Table 6-7b String Descriptor – Manufacturer**

**Note:**

The size of Serial Number is fixed in PL-2303HX design. It must be exactly 8 UNICODE characters (or 16 bytes). Note that in USB Specification, this serial number must be unique for each device.

## 7.0 USB Standard Requests
