- Ethernet cable
- USB drive
  - Vesta Flex Dual Channel Driver data sheets
  - Vesta Flex Control Module data sheets
  - Wiring diagram
  - Instructions on how to install Apps for wireless Control Modules

---

## Comments and suggestions for a Digi-Key dev kit

---

- Always include a Vesta Tunable White 13mm Array with Thrive, in addition to an array with CRI90
- Consider replacing the Bender & Wirth holder with a Vesta S2 Tunable white array (Array with integrated holder). These will be available at the end of Dec.
  - With Vesta S2, we need to include 4 wires
- Consider adding a heat sink to the kit with pre-drilled and threaded Zhaga holes
  - Add two screws
- We need to select a good secondary optic with optics holder and check compatibility / easy mounting. You carry Carclo, Kathod and Ledil lenses. Thus we will help you to select a proper optics combination from these manufactures.
