4. System Connection

The following diagram illustrates the typical input and output connection of the splitter:

5. DIP Switch Operation

The 4-pin DIP switch on the front panel of the unit is used for EDID management and HDCP management. It represents "**0**" when in the lower (**OFF**) position, and it represents "**1**" while putting the switch in the upper (**ON**) position.

Switch 1~3 are used for EDID setting. The switch status and its corresponding setting are shown at the below chart.

| Switch Status (PIN 1~3) | | | EDID Value | |
|----------------------------|-------|---|---|--|
| 1 | 2 | 3 | | |
| 0 | 0 | 0 | Obtains EDID from the first detected display starting at HDMI | |
| 0 | 0 0 0 | | OUT1>OUT2>>OUT16. | |
| 0 | 0 | 1 | 1920x1080@60Hz 8bit Stereo | |
| 0 | 1 | 0 | 1920x1080@60Hz 8bit High Definition Audio | |
| 0 | 1 | 1 | 3840x2160@30Hz 8bit Stereo Audio | |
| 1 | 0 | 0 | 3840x2160@30Hz Deep Color High Definition Audio | |
| 1 | 0 | 1 | 3840x2160@60Hz Deep Color Stereo | |
| 1 | 1 | 0 | 3840x2160@60Hz Deep Color HDR LPCM 6CH | |

Switch 4 is used for HDCP setting. The switch status and its corresponding setting are shown at the below chart.

| Switch 4 Status | HDCP | |
|-----------------|--|--|
| OFF (0) | Automatically follows the HDCP version of display device. | |
| | When display device has no HDCP, if source device have no | |
| | HDCP content, the video output has no HDCP content; if | |
| | source device has HDCP content, there are no video output. | |
| ON (1) | Automatically follows the HDCP version of source device. | |

Note: The factory default switch status is "0000", and it needs to be set to "1111" when enable RS232 control to set EDID and HDCP.

6. RS232 Control

Connect the RS232 port to control device (e.g. PC) with RS232 cable. The splitter can be controlled by sending RS232 commands.

RS232 Commands

The command lists are used to control the splitter. The RS232 control software (e.g. docklight) needs to be installed on the control PC to send RS232 commands.

After installing the RS232 control software, please set the parameters of COM number, bound rate, data bit, stop bit and the parity bit correctly, and then you are able to send command in command sending area.

Baud rate: 9600

Data bit: 8

Stop bit: 1

Parity bit: none

Note:

- All commands need to be ended with "<CR><LF>".
- In the commands, "["and "]" are symbols for easy reading and do not need to be typed in actual operation.
- Type the command carefully, it is case-sensitive.

7. Firmware Upgrade

Please follow the below steps to upgrade firmware by the Micro-USB port:

- 1) Prepare the latest upgrade file (.bin) and rename it as "FW_MV.bin" on PC.
- Power off the splitter and connect the Micro-USB (FW) port of splitter to the PC with USB cable.
- Power on the splitter and then the PC will automatically detect a U-disk named of "BOOTDISK".
- 4) Double-click to open the U-disk, a file named of "READY.TXT" will be showed.
- 5) Directly copy the latest upgrade file (.bin) to the "BOOTDISK" U-disk.
- 6) Reopen the U-disk to check whether there is a filename "SUCCESS.TXT", if yes, the firmware was updated successfully, otherwise, the firmware updating is fail, the name of upgrade file (.bin) should be confirmed again, and then follow the above steps to update again.
- 7) Remove the USB cable and reboot the splitter after firmware upgrade.
