# 45 WATTS

## MULTI OUTPUT AC-DC

#### FEATURES:

- Compact 2.5" x 4.25" x 1.0" Size
- 3 Year Warranty
- Universal 85-264V Input
- Dual, Triple or Quad Outputs
- 86% Peak Efficiency
- 85% Average Efficiency
  <1W No Load Input Power</li>
- O-70°C Operating Temperature
   RoHS Compliant
  - Optional Chassis/Cover

IEC 60601-1-2 4<sup>th</sup> ed. EMC
Class B Emissions per EN55011/32

IEC 60601-1 3<sup>rd</sup> ed. Medical Cert.
 IEC 62368-1 2<sup>nd</sup> ed. Certification

### **ORDERING INFORMATION**

Consult factory for alternate output configurations. Consult factory for positive, negative or floating outputs.  $\ensuremath{^{(14)}}$  Please specify the following optional features when ordering:

CH - Chassis CO - Cover OVP - Overvoltage Protection I/O - Isolated Outputs (consult factory)

All specifications are maximum at  $25^{\circ}$ C/45W unless otherwise stated, may vary by model and are subject to change without notice.

# GRN-45

#### **GRN-45 MULTI MECHANICAL SPECIFICATIONS**

#### APPLICATIONS INFORMATION

- 1. Each output can deliver its rated current but Total Output Power must not exceed 45W.
- 2. Generally, adequate cooling is provided when semiconductor case temperatures do not exceed 70°C rise and transformer temperature does not exceed 60°C rise at any specified ambient temperature.
- 3. Sufficient area must be provided around power supply to allow natural movement of air to develop in convection-cooled applications.
- This product is intended for use as a professionally-installed component within information technology, industrial, and medical equipment and is not intended for stand-alone operation.
- 5. Minimum load is not required for reliable operation; however, a 10% load may be required on Output 1 when loading Outputs 2, 3 or 4.
- This product includes only one fuse in the input circuit. In consideration of clause 8.11.5 of IEC 60601-1-1:2005, a second fuse may be required in neutral conductor of the end product.
- 7. Peak-to-Peak Output Ripple and Noise is measured directly at the output terminals of the power supply, without the use of the probe ground lead or retractable tip (tip-and-barrel method), 20 MHz bandwidth.
- 8. This product was type-tested and safety-certified using the dielectric strength test voltages listed in Table 6 of IEC60601-1:2005. In consideration of clause 8.8.3, care must be taken to insure that the voltage applied to a reinforced insulation does not overstress different types and levels of insulation. Primary and secondary-to-ground capacitors may need to be disconnected prior to performing a dielectric strength type test on the power supply or the end product. It is highly recommended that the DC test voltage listed in DVB.1, annex DVB of UL60601-1 1ST Edition are not exceeded during a production-line dielectric strength test of the assembled end product. Please consult factory for further information.
- This power supply has been safety-approved and final-tested using a DC dielectric strength test. 9. Please consult factory before performing an AC dielectric strength test.
- 10 Maximum screw penetration into bottom chassis mounting holes is 0.100 inches. Maximum screw penetration into side chassis mounting holes is 0.188 inches.
- 11. Common RF shielding precautions may need to be taken to assure emissions compliance. Refer to operating instructions for additional information.
- 12. To comply with emissions specifications, all four mounting hole pads must be electrically connected to a common metal chassis. Chassis/Cover option is recommended. Refer to Operating Instructions for additional information.
- 13. Common RF shielding precautions may need to be taken to assure emissions compliance. Refer to Operating Instructions for additional information.
- 14. Optional Output Configuration (consult factory).
  - V2 can be configured positive, negative or floating with respect to V1.
  - V3 can be configured positive or floating with respect to V1 and must share a common return with V4
  - V4 can be configured negative or floating with respect to V1 and must share a common return with V3.

#### TYPICAL EFFICIENCY vs. LOAD

#### (Model GRN-45-3001 Efficiency shown)

#### MAX Pout vs. AMBIENT TEMPERATURE/INPUT VOLTAGE

Derating requirements - Derate from 100% load at 50°C to 50% load at 70°C. - Derate from 100% load at 90VIN to 90% load at 85VIN.
