General remarks	348

Dear business partners, dear customers,

For the last few years, the METZ CONNECT group has already had a globally oriented growth strategy, in which the activities and processes of the METZ CONNECT companies and organisations had been brought together on a global level. This has given METZ CONNECT energy from the synergistic effects and the more slimline processes for putting into practice our vision of a "Connectivity Specialist" who offers high-quality connection technology for the modern world of communications – from the printed circuit board to the Internet.

Especially against the background of a constantly increasing global networking the focus lies – besides a consistent appearance of METZ CONNECT – on a global availability of METZ CONNECT products. Everything is growing together and borders are losing their importance. Industry 4.0 and Internet of Things (IoT) are the current topics that move the markets. Complex supply and production chains in the industry. Convenient, safe and energy efficient types of building automation (Smart Living). A smart traffic infrastructure. All this requires intelligent networking of the devices and components involved. METZ CONNECT is ready to accompany you as a competent partner: with our know-how and our standardized and customized system solutions for a consistently safe and smooth data and signal flow.

The existing METZ CONNECT product range with its diversified solutions has been expanded further, and the new products have now been integrated into the catalog. We have already informed you in our last catalog about the deliberate integration of our connection technology, in which we have divided our core competences into three core ranges:

**U|Contact** stands for the connection technologies related to printed circuit boards and devices,

**C|Logline** stands for intelligent system and switch cabinet components and

**P|Cabling** stands for cabling systems in the copper and fiber optic technologies for building and industrial cabling applications.

Our consistent connection technology and competent advice for a wide range of application solutions and customer requirements makes us the ideal partner for your demanding requirements. Let us jointly approach the projects in equipment and system construction, structured building and industrial wiring or as proven partner in wholesale distribution and support you in your daily work.

Make also use of our Internet appearance rich in contents and easy to understand. Here you will find a current overview of all novelties, products, including product-relevant documents, planning aids and mounting films. Visit us at [www.metz-connect.com](http://www.metz-connect.com) and see for yourself.

We are happy to meet the challenges that await us and are looking forward to advise and assist you as a real partner by our technically and economically sound solutions!

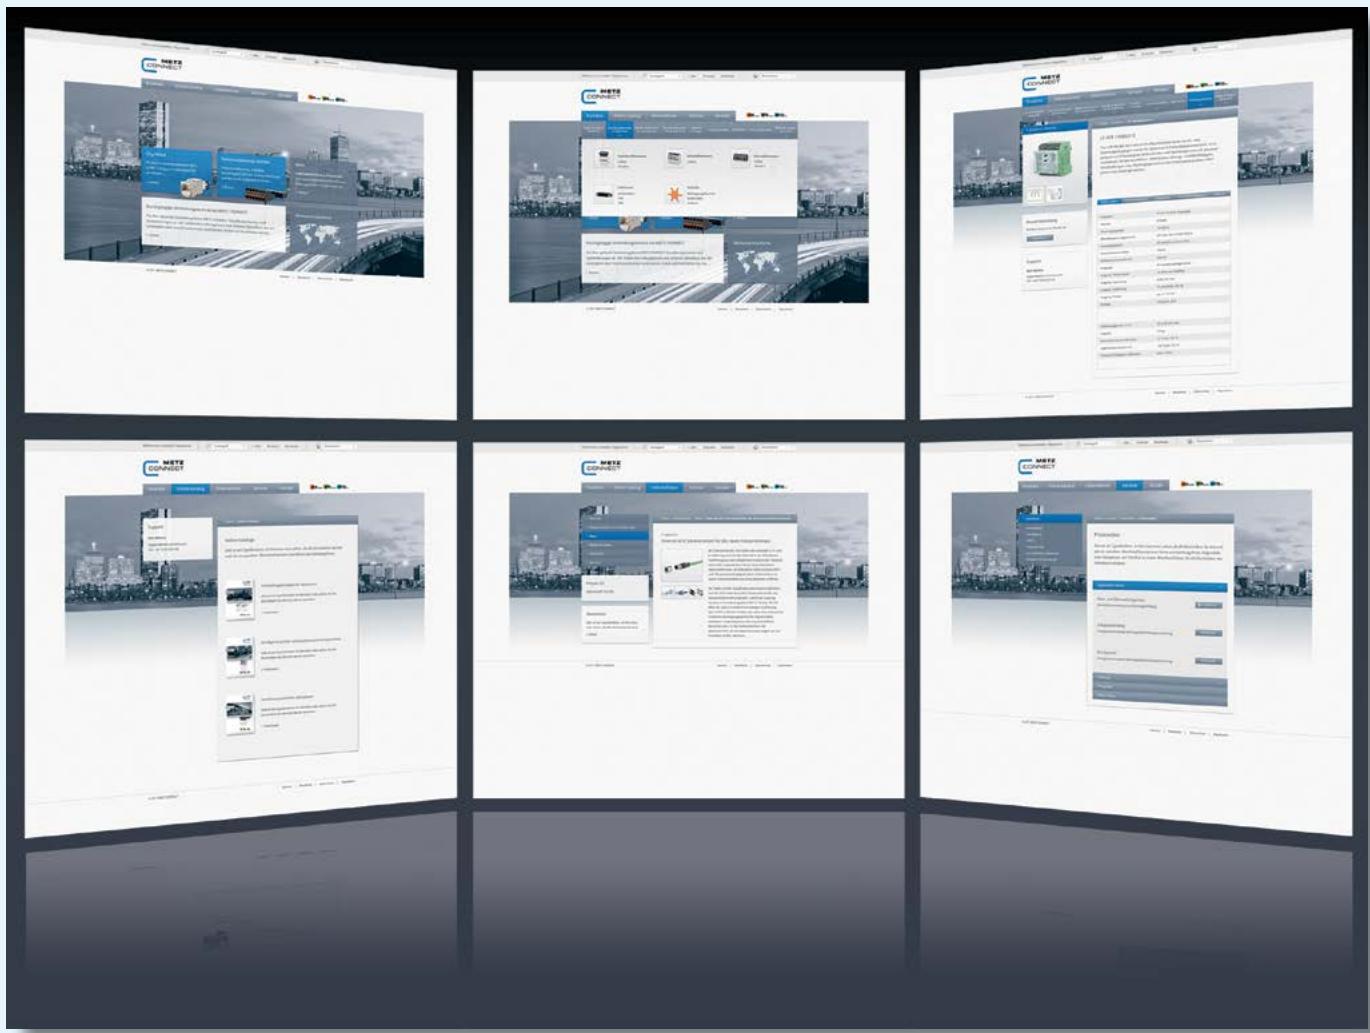

Your

**Jochen Metz**  
(Managing Partner)

**Christian Metz**  
(Managing Partner)

and the entire team from METZ CONNECT.

[www.metz-connect.com](http://www.metz-connect.com)

## Detailed knowledge in a matter of seconds

Our product catalogs offer detailed product descriptions. But if you want to get even deeper into the details, visit us at [www.metz-connect.com](http://www.metz-connect.com) to get precise technical information within no time at all.

To do so, you may also use mobile tagging: Simply scan the shown QR-code using your smartphone and you will directly be connected to the METZ CONNECT homepage.

# The most up-to-date connection to METZ CONNECT

## Our website for even more efficiency

Ideal user-friendliness and non-stop availability, – our website [www.metz-connect.com](http://www.metz-connect.com) offers you the most recent news about METZ CONNECT and our products that you need for your daily business. And all this at a speed that will really impress you!

### Our products

You may use different options to search for a product: the integrated navigation bar with its "Products" menu and concise structure, or the enterprise research option including its filter function or the online catalogs for all those, who wish to rely on our known product portfolio structure. A few clicks will lead you to the desired products and enable you to download all relevant documents such as data sheets, drawings or certificates. In the same time also compatible accessory components will be displayed.

Under "Services" a complete download overview will be shown presenting the entire download offer from information brochures and certificates up to test results and 3D-data.

### Your contacts

Finding your right contact with METZ CONNECT, a distributor or special dealer is easy and comfortable using the country and zip-code search options under "Contact". You can also select here your global sales partner.

### News(letter)

In our News area we inform you in real time on our product innovations, events and news.

In the same time you may want to subscribe to the METZ CONNECT newsletter. This will ensure that you will receive the latest information literally in real time directly on your computer.

Or just come and discover the web site of METZ CONNECT and play around with all its benefits – welcome to [www.metz-connect.com](http://www.metz-connect.com)!

# Limitless connection

Globally, the importance of networks is ever increasing. The principles of universal, transparent information – from everywhere and at any time – and a communication with devices mapping different processes – define more and more our everyday life. And all this depends on reliable connection techniques.

To establish perfect connections is the core competence of METZ CONNECT. The METZ CONNECT group of companies offers a complete product range that stands out by its maximum system compatibility and continuity.

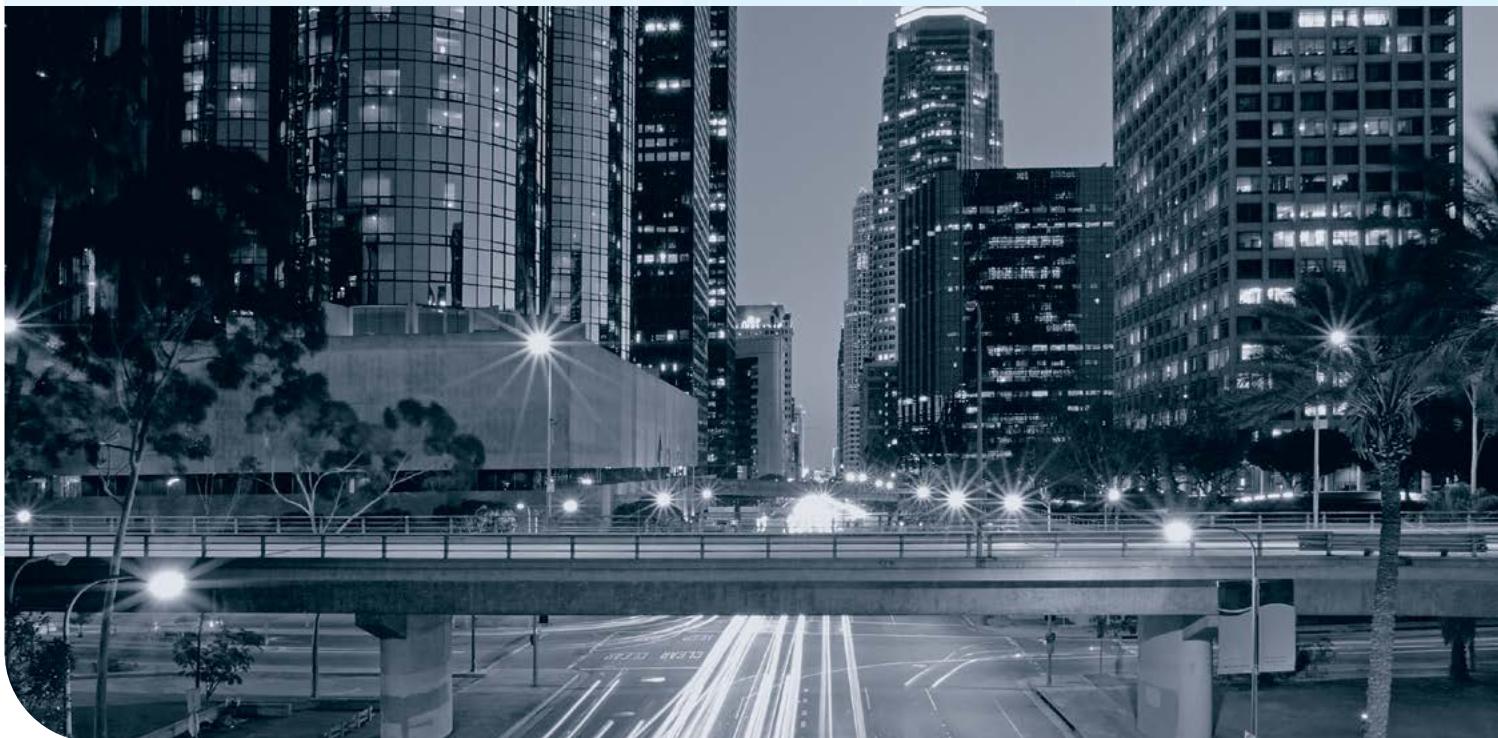

Our sophisticated portfolio and product approach in the market segments industrial electronics, data and communication technology and building services engineering guarantees smooth data flow from the printed circuit board through to connectors, cables and patch panels up to the infrastructural environment.

METZ CONNECT can thus guarantee a comprehensive, high-quality and transparent communication across all applications without system failures or performance losses. Next to the

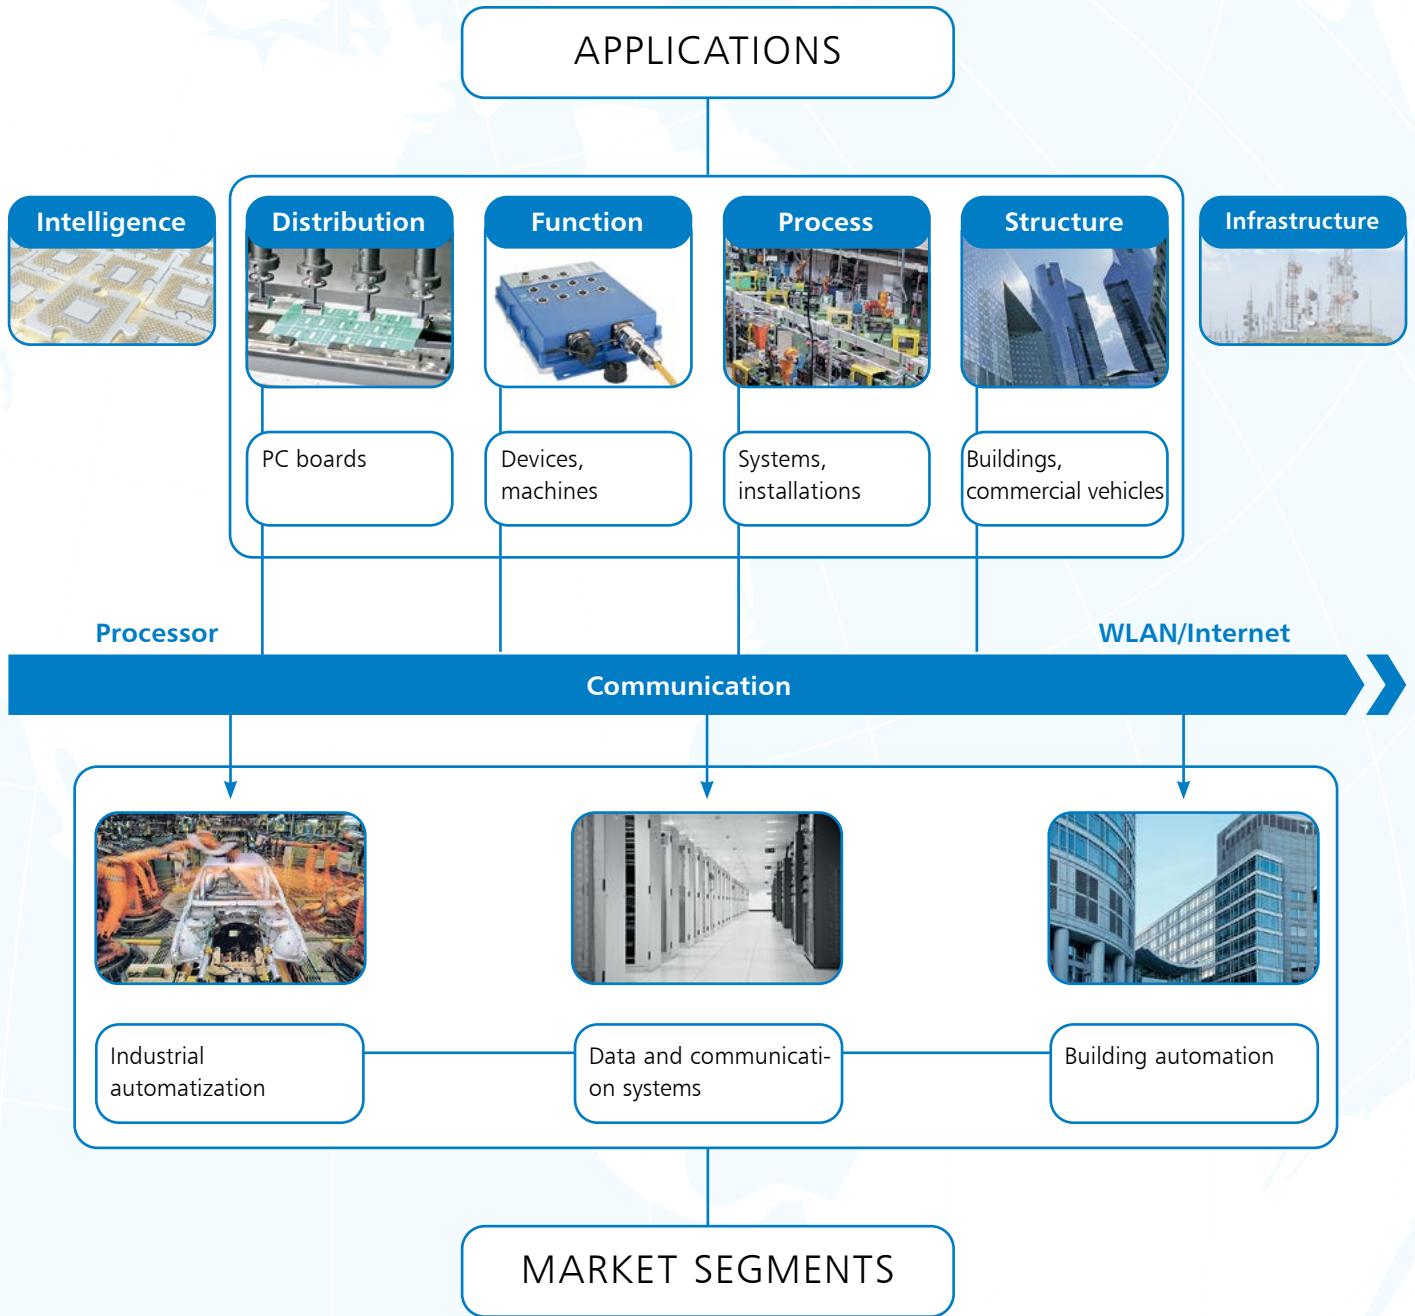

complete solutions, our group of companies offers also comprehensive services such as tailored product adaptations and new developments, qualified trainings, marketing support for our trade partners as well as a vast information program.

METZ CONNECT excels by quality – resulting from its intelligent company-internal value adds and perfectly harmonized processes from a product idea up to its delivery and commissioning. Our quality management system enables processes that are free from losses and protect the environment. An additional competitive advantage for our customers: METZ CONNECT supplies complete solutions as one single provider.

To do so, we rely on our own stamping shops, plastic mold injection and tooling shops, testing laboratories, internal assembly units and experts in construction and programming of tools and production automation.

# All from one single source – for your competitive advantage

# A product range, which connects everything

METZ CONNECT offers a universal range of products from printed circuit boards up to terminal devices. As your customer-oriented solutions partner, we subdivided our diversified, user-friendly and internationally standardized components and/or systems into three well structured arrays.

Under the name of **U|Contact** we bundle innovative connectivity products and solutions for printed circuit boards for a use with all modern techniques applied in the assembly of printed circuit boards. Products that are compatible with the standards of the markets as well as tailored product solutions for industrial controls and building automation are our core strengths in this field. This includes terminal blocks, board-to-board connectors as well as peripheral connectors (RJ, M12, USB) for different applications and protection classes.

**P|Cabling** includes highly specified, internationally standardized and powerful connection components and connection systems in the copper and fiber optic techniques. These solutions are used in structured building and industry cabling applications and for data centers. Convenient installation, maximum quality and perfect system compatibility across all important performance classes are the main characteristics of our modular inserts, connectors, wall outlets, patch panels, distributors, IP-protected plug connectors and patch and installation cables.

**C|Logline** stands for intelligent system components for a highly communicative and decentralized control in the application and product areas building automation, measurement and monitoring relays, interface modules, industrial relays and telecommunication.

In addition we offer cross range system solutions. Perfectly harmonized connection systems with a protection degree of IP67 facilitate fast, safe and flexible connections of devices using optical coupler, RJ45 or Ethernet M12 connections.

**U | Contact**

## PC board connectivity

U|Contact – innovative product systems for PC board connectivity

METZ CONNECT offers you connection systems for circuit boards and devices in a whole range of models. Continuous improvement and permanent extensions of our product portfolio tailored to connection systems for printed circuit boards and devices have earned us a reputation as trusted and safe partner.

Through its product range U|Contact METZ CONNECT offers continuous connections for all common techniques in the population of printed circuit boards. Products complying with the standards of the markets as well as customer-specific solutions and connection systems for devices geared to industrial electronics and building services engineering are our core competencies in this field.

# U|Contact product key

The product key for the U|Contact range of products offers customers a contemporary, uniform and easy-to-understand numbers system for all series of products.

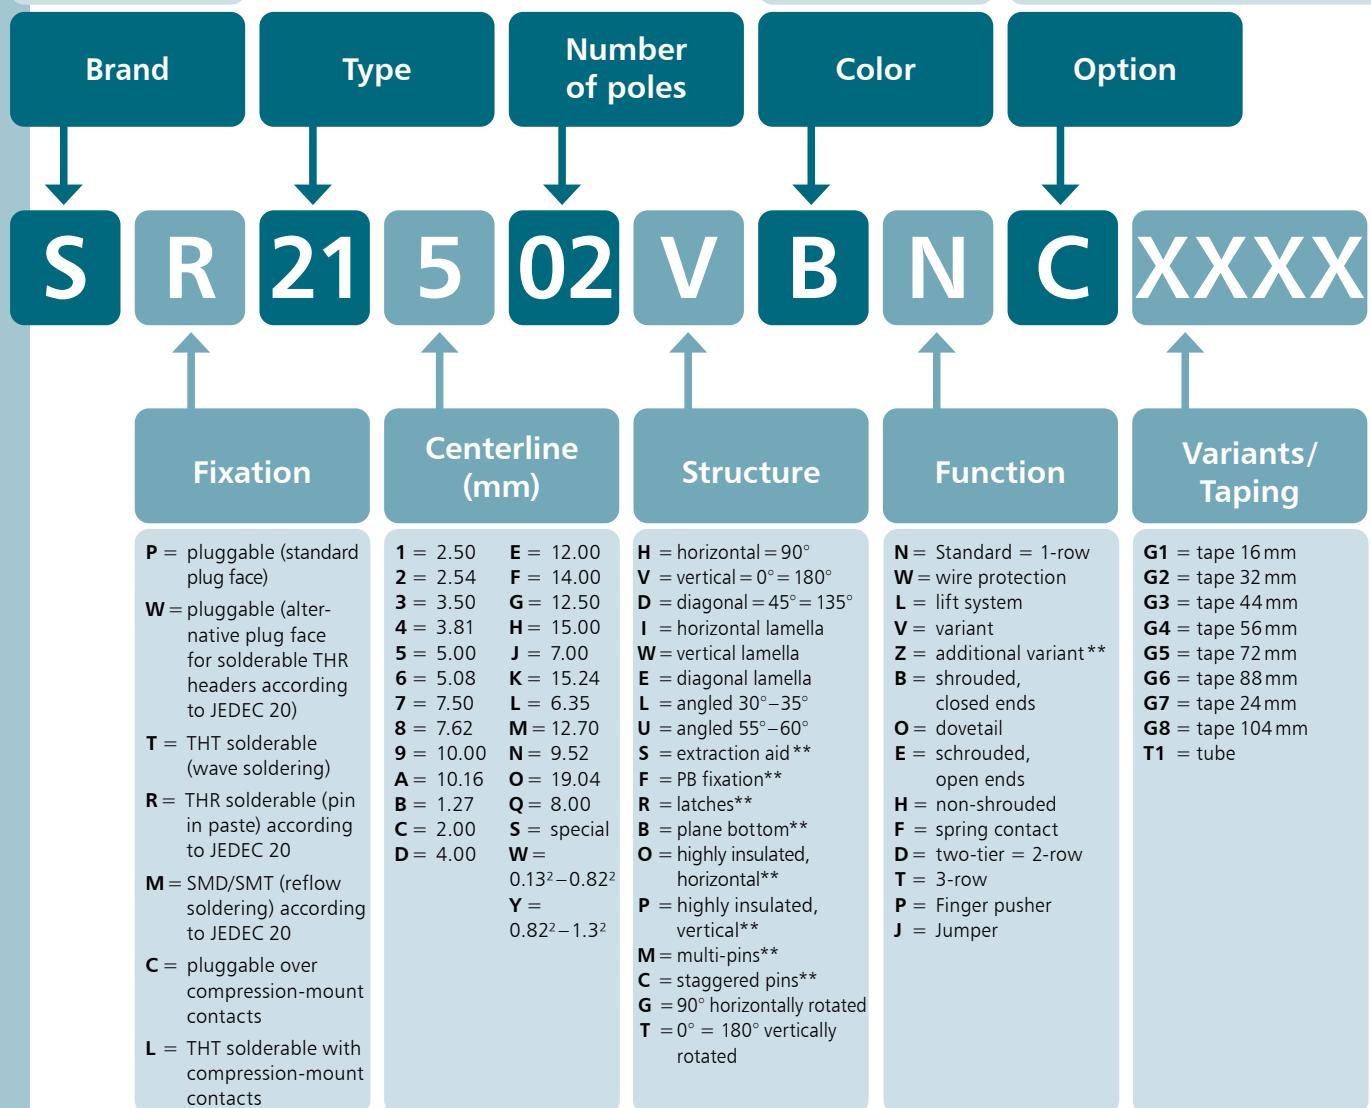

The advantage: This product key describes the products according to their characteristics and thus creates transparency in the ordering and logistics processes.

Product families provide for a plain overview of the components and allow you to quickly identify the product properties such as fixation, center line, number of positions, etc. The variety of types has thus been reduced and combined to articles with identical features to make administration easier.

**R** = Screw-type terminal blocks  
**P** = Pin headers  
**S** = Spring clamp terminal blocks  
**I** = Insulation displacement terminal blocks  
**F** = Female connectors

**B** = black  
**G** = green  
**R** = red  
**O** = orange  
**D** = gray  
**W** = white  
**Y** = yellow  
**N** = nature  
**H** = blue  
**E** = brown  
**V** = violet  
**X** = colorless  
**M** = multi-color

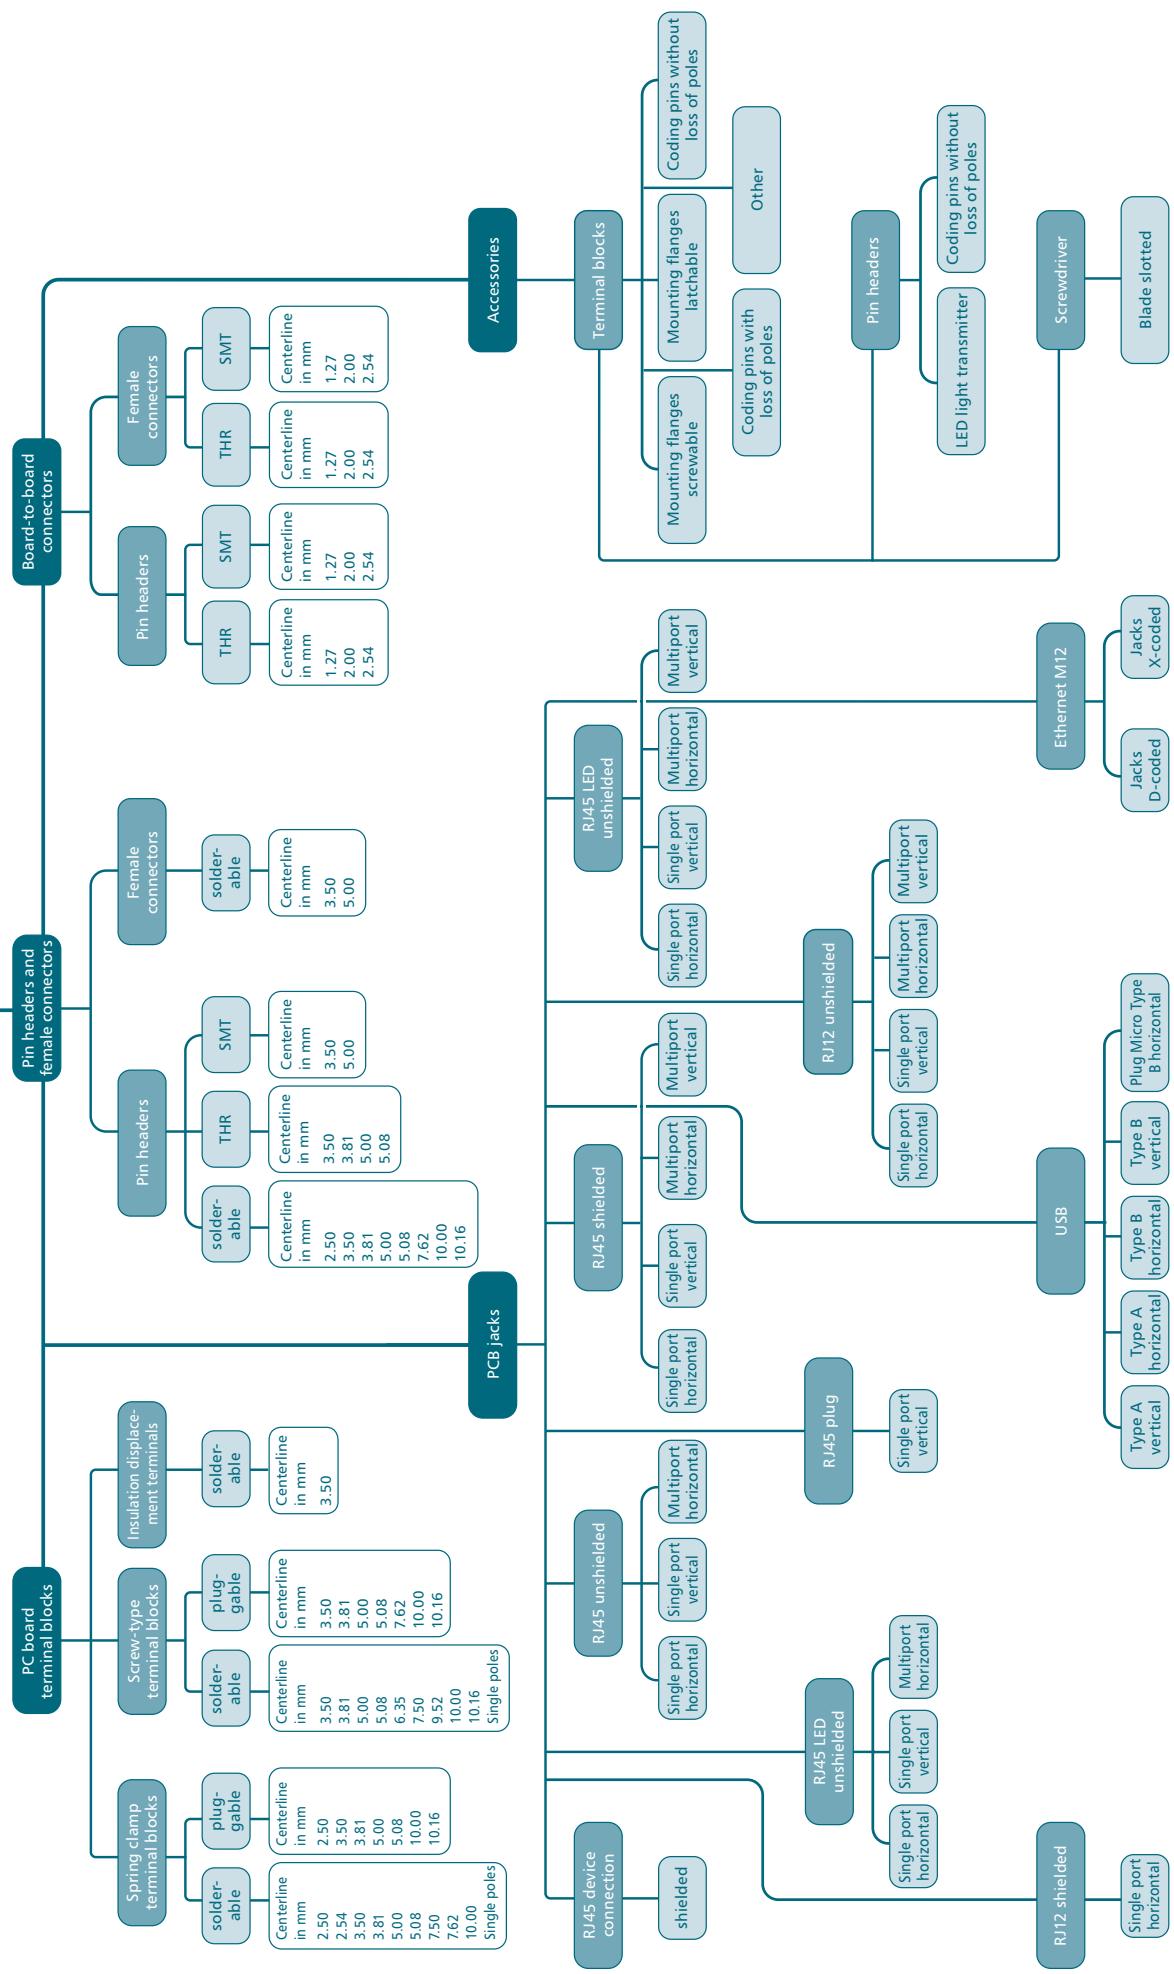

**N** = normal, wire feed non-codeable side  
**O** = normal, wire feed codeable side  
**F** = flange, wire feed non-codeable side  
**S** = flange, wire feed codeable side  
**U** = sequencing possible\*, wire feed non-codeable side  
**V** = sequencing possible\*, wire feed codeable side  
**C** = fittable\*, wire feed non-codeable side  
**D** = fittable \*, wire feed codeable side  
**L** = connection left-hand side  
**R** = connection right-hand side  
**T** = flat design  
**Z** = micro sd card slot  
**H** = two body material

\*Sequencing possible means the mechanical sequencing without loss of poles (by dovetails) | Fittable stands for a loose sequencing without loss of poles (without dovetails)

\*\* Only applicable if two variants are available.

<b>3</b>	Screw type terminal blocks	66
<b>4</b>	IDC type terminal blocks	134

# PC board terminal blocks

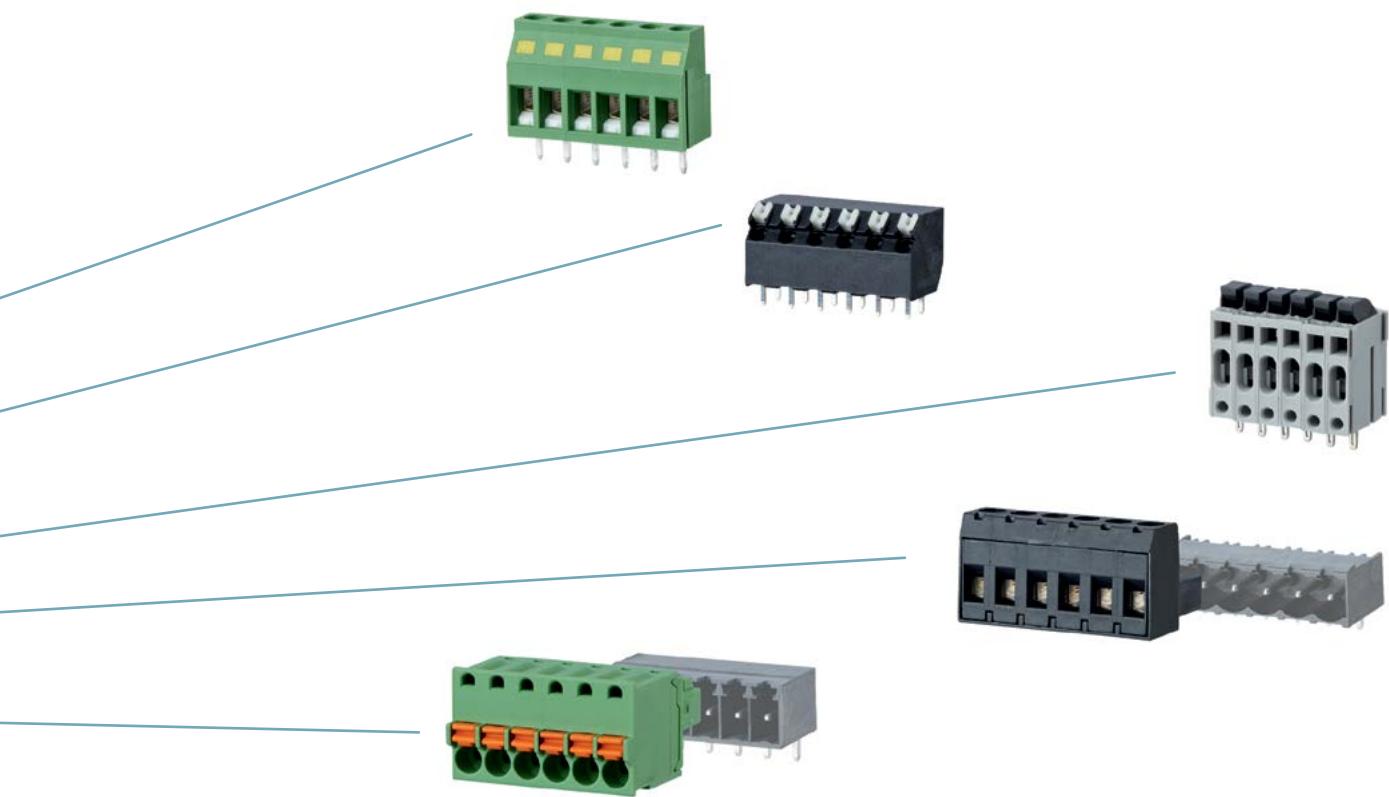

## PC board terminal blocks

**Tried and tested** – METZ CONNECT has successfully marketed terminal blocks for printed circuit boards worldwide for decades. The portfolio incorporates products for signal and data streams, medium control streams and network connection terminals and output terminals.

**Complete** – a permanent expansion of the proven range as well as constant improvement and further development of our products are the declared goal in order to be able to offer you complete and high-quality solutions for your applications.

**All from one single source** – regardless of what you need in detail – products that result from joint developments, from design-in concepts based on existing or modified products or catalogs items – we will fully meet your demands in terms of PC board connectivity.

**Future-oriented** – in line with the market trends, our focus is on products that are also suitable for automated production. Whether it's designs for through-hole-reflow (THR) or surface mount technology (SMT) – we have the solution for you. We do of course also supply these products in the "Tape & Reel" packaging required for automation.

# Spring clamp terminal blocks

## Design specification

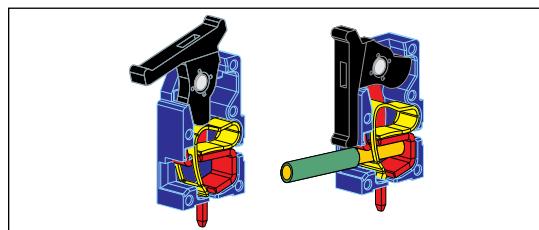

The **product family** consists of terminal blocks that are based on a spring clamp connection.

By spring clamp connection, we mean an electrical connection that is created by clamping an individual of an individual, isolated conductor using a spring. It is suitable for solid wires and multi-wire strands of 0.08–2.5 mm<sup>2</sup> rated section and enables:

- direct terminal without pre-treatment of conductor
- direct terminal with splice protection
- indirect terminal via wire end sleeve or pin cable shoe

### Spring clamp terminal block with cage clamp (with and without eccentric lever)

- with eccentric lever open terminal chamber in the delivery status
- with eccentric lever tool-less connection of the conductors
- very short assembly times
- the closed power system inside the terminal block prevents pressure from being applied onto the circuit board at the time of connection
- gas-proof connection at the terminal point
- sequenceability of different colors
- can be installed in the housing
- the spring adapts automatically to changed conductor sections

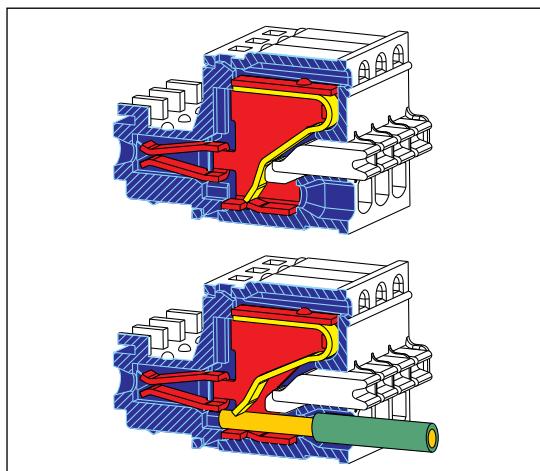

### Reflow-compatible components

METZ CONNECT offers a wide range of spring clamp terminal blocks in reflow-compatible designs. The demand for reflow-compatible components is constantly growing thanks to ever increasing degrees of automation in the production processes.

### Spring clamp terminal block with leaf spring

- solid wires can be connected by simple insertion without actuation
- stranded wires and thin solid wires are connected using a standard screwdriver
- short assembly times
- gas-proof connection at the terminal point
- sequenceability of different colors
- can be installed in the housing
- the spring adapts automatically to changed conductor sections

"Tape & Reel" is the name given to a taped form of packaging. The aim of this packaging variant is to automate production processes. The components are packed in a blister tape and welded with a protective foil. This tape is then wound round a reel. Taping corresponds to DIN EN 60286.

# Spring clamp terminal blocks

## Printing options

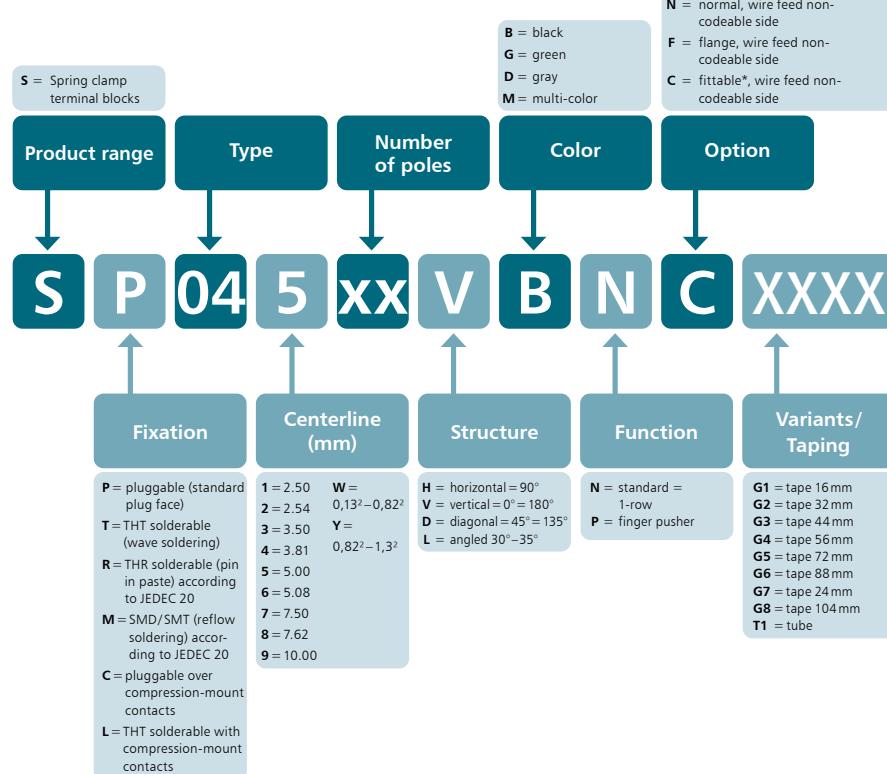

We offer individual printing of your terminal blocks. Figures or symbols, anti-clockwise or clockwise, legible or bottom up depending on the technical feasibility. Ink-jet print, pad printing and hot stamping are available as methods. Design your individual terminal block with us.

## Color options

You can order the terminal blocks in a variety of sizes and also often vary the colors within a terminal block, if required. This is for instance helpful in housing integration to achieve an optically attractive overall picture or to use this as a further coding option. We would be pleased to advise you on the possible combinations.

## Product key spring clamp terminal blocks

\* Fittable stands for loose sequencing without loss of poles (without dovetails).

# Screw-type terminal blocks

## Design specification

### Terminal body

The terminal bodies consist of a copper wrought alloy. The surface is galvanically nickel-plated. With the types with soldering pin, the surface is given a galvanic nickel base and tin-plated to generate high corrosion resistance and superb soldering ability. All terminal bodies are installed in the insulation housing to ensure that they cannot be lost.

### Terminal screws

The terminal screws in M2–M4 can optionally be produced in different materials. The screws are rounded at the pressure areas, meaning that it is possible to connect the conductor without wire protection. Usually the screws are secured against unwanted loosening themselves.

### Contact systems for the METZ CONNECT plug system

#### a) Lamella contacts

The lamella contacts are silver plated, optionally tinplated or gold-plated and are suitable for rounded pins. The lamella-like design of the contact bars means that currents of up to 10 A can be transferred. Even after the 100th plugging, the transfer resistance between the jack contact and the pin header is  $\leq 5 \text{ m}\Omega$ .

#### b) Plug system with integrated contact

The tulip-shaped plug system is made of bronze and is suited for both round and square pins.

### Wire protector

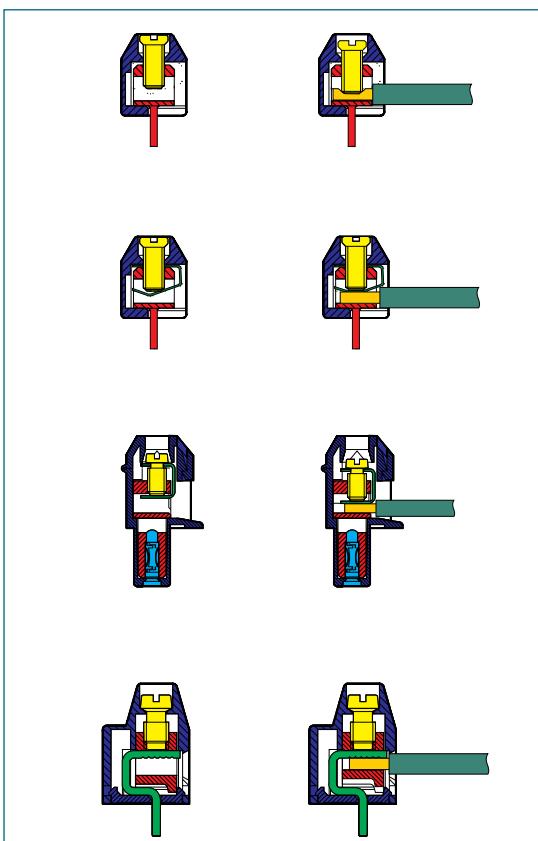

The wire protector prevents damage to the conductors during terminal connection.

### Rising wire protector

Some types are equipped with a rising wire protector that works according to the principle of the lift system. When the screw is turned, the wire protector lifts parallel to the base of the terminal body.

### Lift system

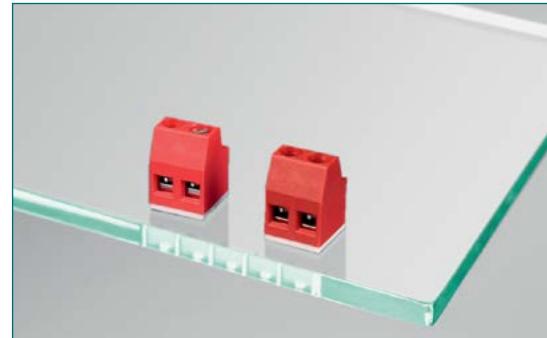

Through the lift effect of the terminal body, the conductor is clamped over a large area and in parallel. A damage to the conductor by the screw is entirely eliminated here too.

# Screw-type terminal blocks

## Printing options

We offer individual printing of your terminal blocks. Figures or symbols, left- or right flush, legible or standing on their head depending on the technical feasibility. Ink-jet print, pad printing and hot stamping are available as methods. Design your individual terminal block with us.

## Color options

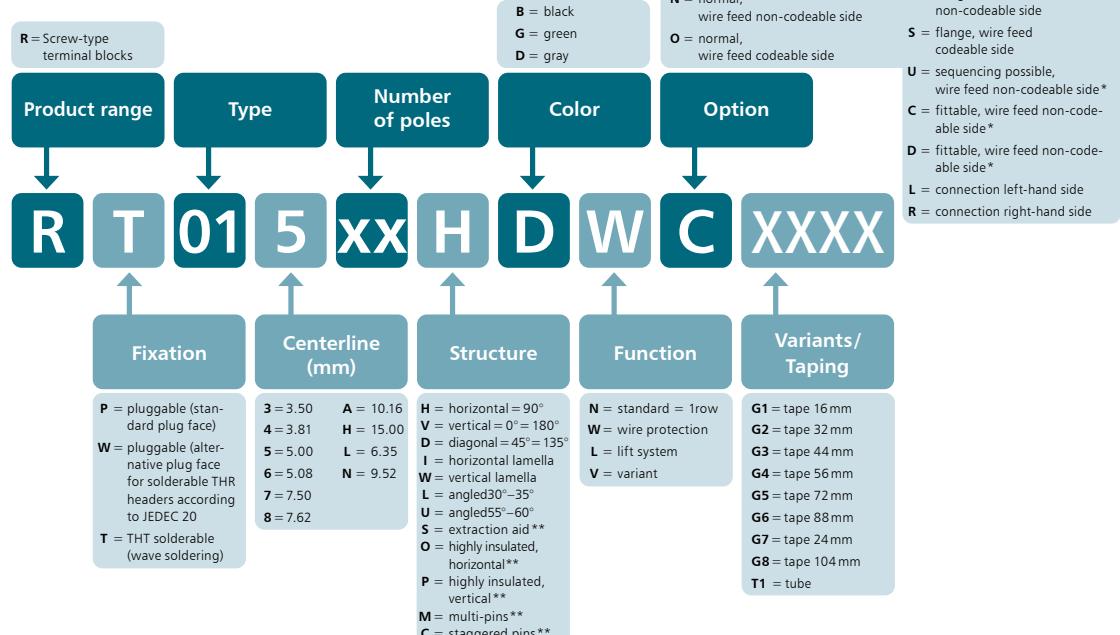

You can order the terminal blocks in a variety of basic colors. This is for instance helpful in housing integration to achieve an optically attractive overall picture or to use this as a further coding option. We would be pleased to advise you on the possible colors.

## Torques – Extract from DIN EN 60947-1 and DIN EN 60999-1

Start-up torque for documenting the mechanical rigidity of screw connections.

Metric standard value	Diameter range	Tightening torque (Nm)	
		Test moment	Recommended
2.5	≤ 2.8	0.4	0.4–0.6
3.0	> 2.8 up to 3.0	0.5	0.5–0.7
–	> 3.0 up to 3.2	0.6	0.6–0.8
3.5	> 3.2 up to 3.6	0.8	0.8–1.0
4	> 3.6 up to 4.1	1.2	1.2–1.6

## Product key screw-type terminal blocks

\* Sequencing possible means the mechanical sequencing without loss of poles (by dovetails). Fittable stands for a loose sequencing without loss of poles (without dovetails).

\*\* Only applicable if two variants are available.

11

**RP995xxVDNN**

## Centerline      Design      Function

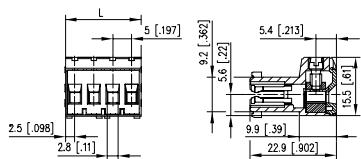

- screw type terminal block, pluggable
  - centerline 5.00 mm, direction of connection vertical 0°
  - lift system, fittable without loss of poles
  - color gray

## Technical data

c  us V / A / AWG 300 / 6 / 24 - 12

Overvoltage category	III	III	II
Pollution degree	3	2	2
Rated voltage	250.0 V	630.0 V	630.0 V
Rated test voltage	4.0 kV	4.0 kV	4.0 kV
Insulating material class	CTI 600		
Rated wiring solid wire	0.2 - 2.5 mm <sup>2</sup>		
Rated wiring stranded wire	0.2 - 2.5 mm <sup>2</sup>		
Rated wiring solid wire	AWG 24 - 12		
Rated wiring stranded wire	AWG 24 - 12		
Clearance and creepage distances	3.2 mm		
Protection category according to IEC 60529	IP 20		
Min. insul. strip length	6.5 mm		
Color	gray		

## Dimensional drawing

L = (Pole size - 1) \* centerline + 5 mm (0.197 in.)

Complete the part number by adding the pole size.

# IDC type terminal blocks

## Design specification

The product family of IDC type terminal blocks blocks consists of terminal blocks that are based on the principle of strip-free technology.

The product family of insulation displacement connectors consists of terminal blocks based on the principle of insulation displacement technology. By insulation displacement, we mean an electrical connection that is created by the cutting the insulation of the individual conductor inside the terminal block with a knife contact. It is suitable for solid and stranded copper wires and allows direct clamping without pre-treatment of the conductor. The insulation material has to be PVC or another material with properties that harmonize with the cut and clamp action. That means complete displacement of the insulation material by the inner knife flanks should be possible without damaging the conductor. In addition the insulation sleeve of stranded conductors has to be able to keep the single wires in place so that they are not displaced during the termination process.

We would be pleased to advise you!

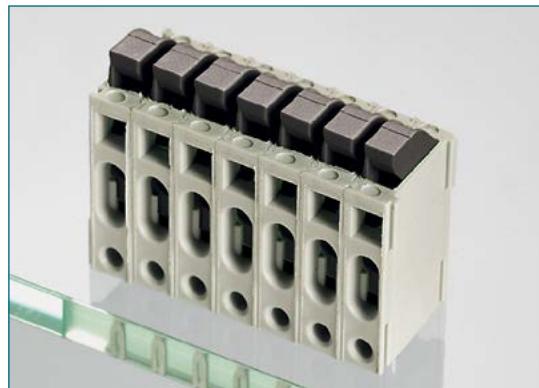

# IDC type terminal blocks

## Printing options

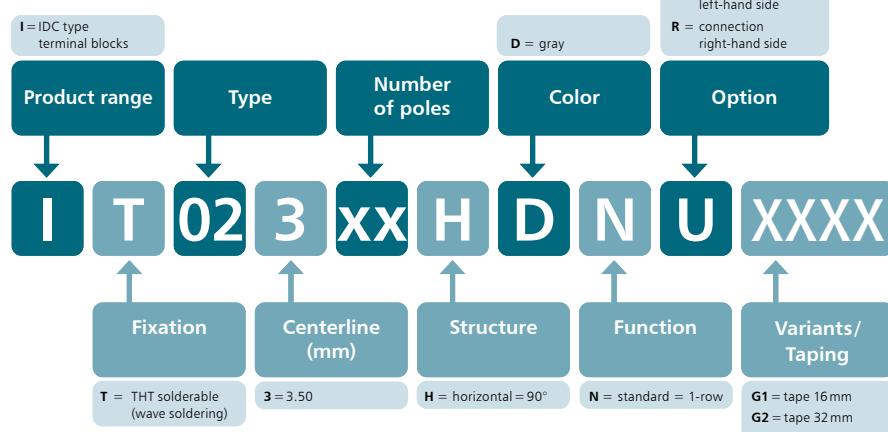

We offer individual printing of your terminal blocks. Figures or symbols, anti-clockwise or clockwise, legible or bottom up depending on the technical feasibility. Ink-jet print, pad printing and hot stamping are available as methods. Design your individual terminal block with us.

## Color options

You can order the terminal blocks in a variety of sizes and also often vary the colors within a terminal block, if required. This is for instance helpful in housing integration to achieve an optically attractive overall picture and to us this as a further coding option. We would be pleased to advise you on the possible combinations.

## Product key IDC type terminal blocks

\* Sequencing possible means the mechanical sequencing without loss of poles (by dovetails).

# Pin headers and female connectors

## Pin headers and female connectors

For a combination with terminal blocks, METZ CONNECT offers also a large product portfolio of pin headers and female connectors. We offer pin headers and female connectors for standard soldering processes as well as reflow-capable versions as THR or SMD/SMT, as loose bulk goods or as Tape & Reel solutions.

We offer pin headers and female connectors with various centerlines and different numbers of poles for vertical and horizontal mounting solutions.

We offer individual printing of your pin headers and female connectors according to your demands and do also offer various base colors.

# Pin headers and female connectors

## Design specification

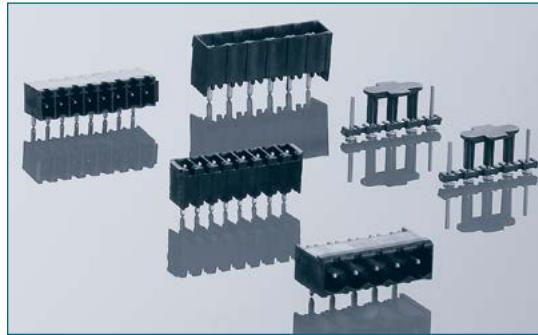

### Contact pins

Contact pins are made of a wrought copper alloy and have a surface protection. Silver plating is available as a standard procedure.

Electro tin-plating, gold flash plating or hard gold-plating are possible on request.

### Note regarding the storage of pin headers/ female connectors with passivated silver pins:

- closed in poly-bags and not directly in the cardboard packaging
- no direct sunlight
- room temperature
- no exposure to aggressive ambient conditions

### Coding

Some of the pin headers/female connectors with open or closed ends can be coded by inserting coding pins into the respective slots. If coded correctly, the ridges of the respective coding pins slide past each other and terminal block and pin header/female connector mate. This method of coding enables a plug connector to be distinctively assembled without loss of a pole.

### Reflow-compatible components

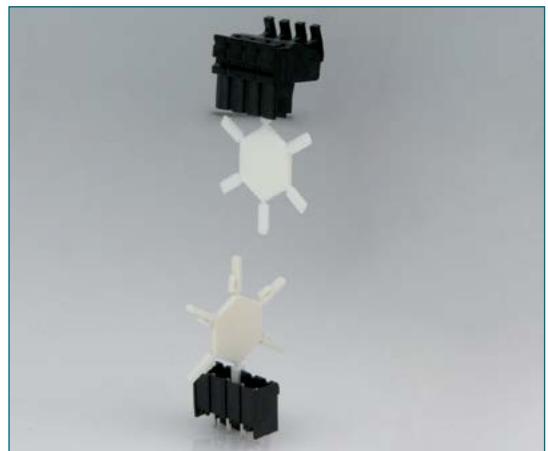

METZ CONNECT offers a wide range of pin headers/female connectors in reflow-compatible designs. The demand for components that can be soldered by THR (through hole reflow) or SMT (surface mount technology) is constantly growing thanks to ever increasing degrees of automation in the production processes. In addition, the use of pin headers/female connectors in combination with the pluggable terminals and spring clamp terminal blocks as counter pieces is already an intelligent solution for flexible connection tasks in the PC board environment anyway. Through the THR method, pin headers can be processed along with SMT components in the reflow soldering process. We also have a range of "Tape & Reel" pin headers and female connectors for automatic assembly. Please ask us about these, we would be pleased to show you our solutions.

**"Tape & Reel"** is the name given to a taped form of packaging. The aim of this packaging variant is to automate production processes. The components are packed in a blister tape and welded in a protective foil. This tape is then wound round a reel. Taping corresponds to DIN EN 60286.

### METZ CONNECT standard:

- Reel diameter: 15" (13", 7" on request)
- Tape width: according to standard, depending on the number of positions

# Pin headers and female connectors

## Printing options

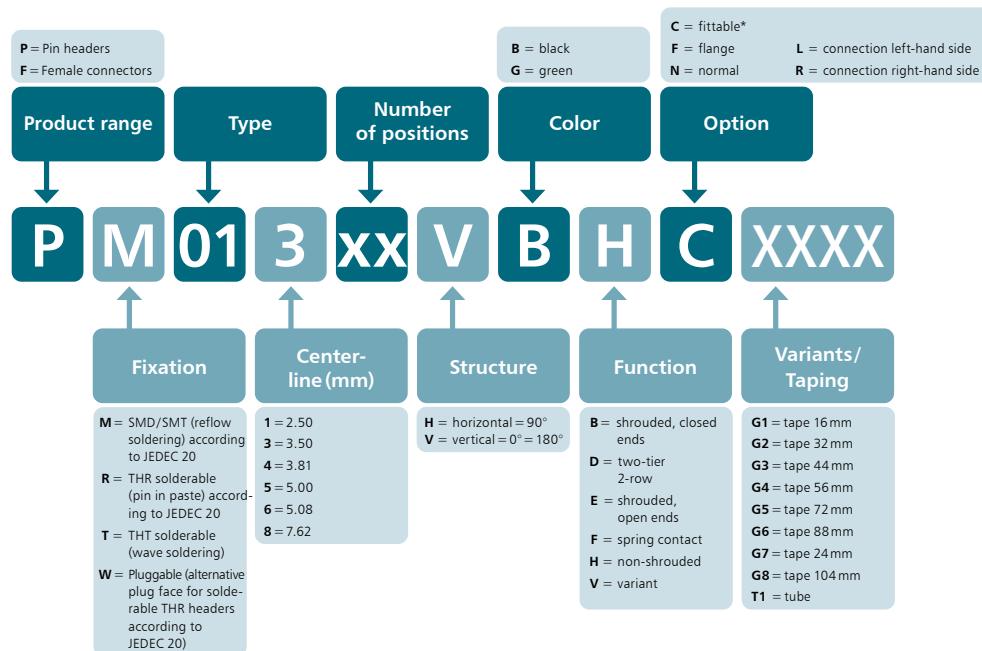

We offer individual printing of your headers/socket panels. Figures or symbols, anti-clockwise or clockwise, legible or bottom up depending on the technical feasibility. Ink-jet print, pad printing and hot stamping are available as methods. Design your individual header with us.

## Color options

You can order the headers/socket panels in a variety of basic colors. This is for instance helpful in housing integration to achieve an optically attractive overall picture and to us this as a further coding option. We would be pleased to advise you on the possible colors.

## Product key pin headers and female connectors

\* Fittable stands for loose sequencing without loss of poles (without dovetails).

# Symbol Definition

## Guiding icons

	Spring clamp terminal block		Wire protector
	IDC terminal block		modular
	Screw type terminal block		Pin header for vertical mounting
	Pin header		Shrouded pin header for vertical mounting
	Female connector		Pin header with open ends for vertical mounting
	Ethernet M12		Pin header with closed ends for vertical mounting
	solderable		Pin header for horizontal mounting
	pluggable		Shrouded pin header for horizontal mounting
	Centerline		Pin header with open ends for horizontal mounting
	Wire entry 90°		Pin header with closed ends for horizontal mounting
	Diagonal wire entry		designed for THR
	Wire entry 0°		designed for SMT
	Lift system		Tape & Reel possible

RP015xxWBLC (Type 049) 113

RP035xxIBLN (Type 013) 115

FT085xxVBFC (Type 026) 198

**PR075xxHBER**\* (Type 338)

Centerline      Design      Function

\*old product name

- pin header, THR solderable
- centerline 5.00 mm, direction of connection 90°
- open ends, fittable without loss of poles
- color black
- Tape & Reel packaging
- codeable, connection right side, pluggable for module housing

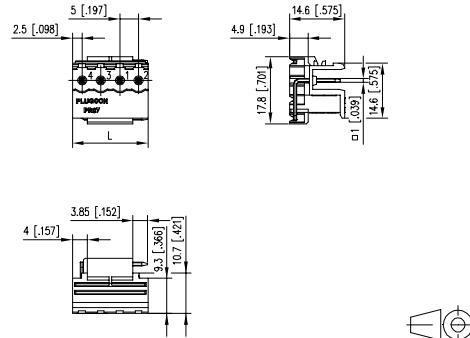

## Technical data

V / A      300 / 17

12 A / 250 V / 4 kV / 3 IEC 61984

Overvoltage category	III	III	II
Pollution degree	3	2	2
Rated voltage	250 V	630 V	630 V
Rated test voltage	4.0 kV	4.0 kV	4 kV
Insulating material class	CTI 600		
Clearance and creepage distances	3.2 mm		
Solder pin dimension	1.0 x 1.0 mm		
Recommended pc board hole dia.	ø 1.4 mm		
Solder pin length	3.85 mm		
Protection category according to IEC 60529	IP 00		
Color	black		

## Dimensional drawing

$$L = (\text{Pole size} - 1) * \text{centerline} + 5 \text{ mm (0.197 in.)}$$

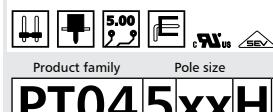

P/N

313381

Complete the part number by adding the pole size.

# Board-to-board connectors

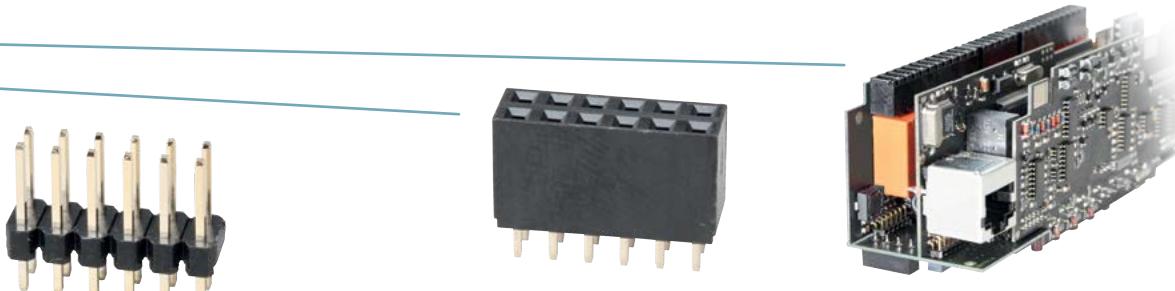

## Board-to-board connectors

The integration of numerous applications into one single device along with the miniaturization of the devices themselves lead to entirely new challenges for PC board connectivity. As competent partner and specialist for connection components and cabling systems, METZ CONNECT has taken these challenges.

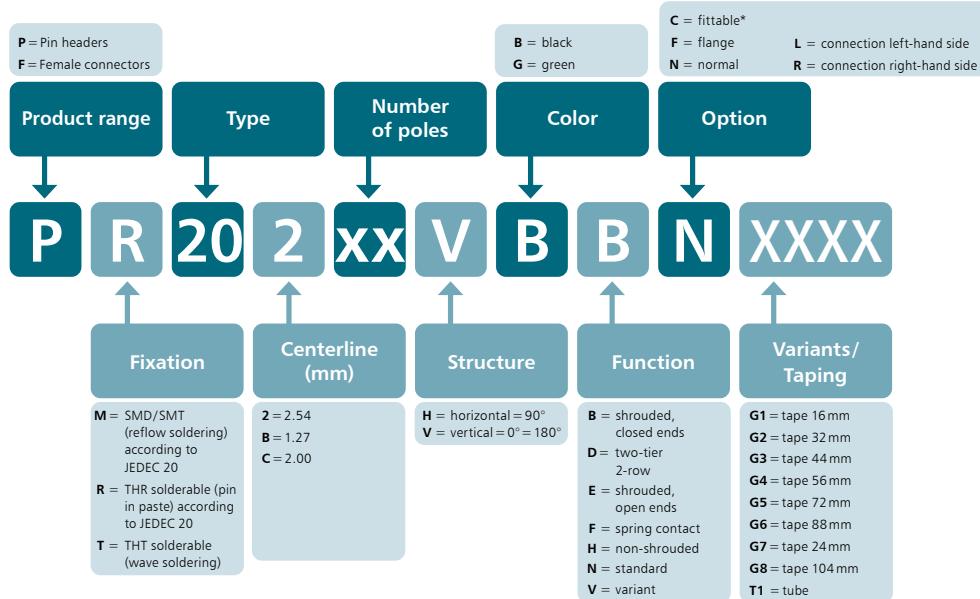

In order to integrate several applications into one single device, the PCBs must not only be arranged on top and next to each other but also be connected to each other. This is made possible by so called board-to-board connectors that are available in a multitude of variants.

The new product range of board-to-board connectors from METZ CONNECT offers exactly that connection system which is indispensable for compact, flexible and safe connections of PCBs; in the same time its components will compensate for important displacement tolerances and PCB distances. Especially in building services engineering, data and communication techniques as well as in industrial electronics efficient, space saving, and yet powerful connections of the individual applications integrated into one single device are a must.

The components presented here are geared to power transmission and ideally suited for modular devices. We will continue to extend this product family in line with the next applications.

**Product key board-to-board connectors**

\* Fittable stands for a loose sequencing without loss of poles (without dovetails).

# PC board jacks/plugs

## PC board jacks/plugs

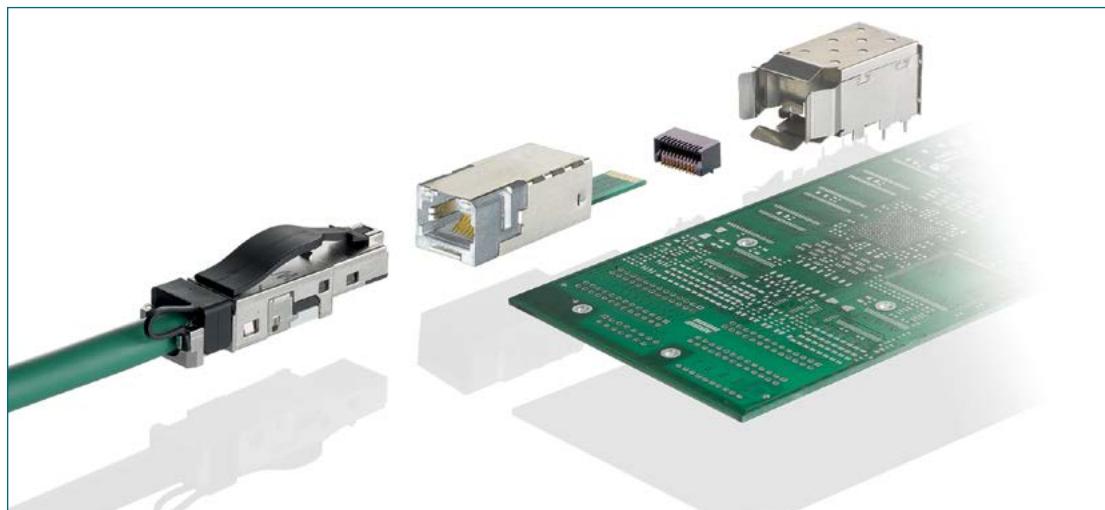

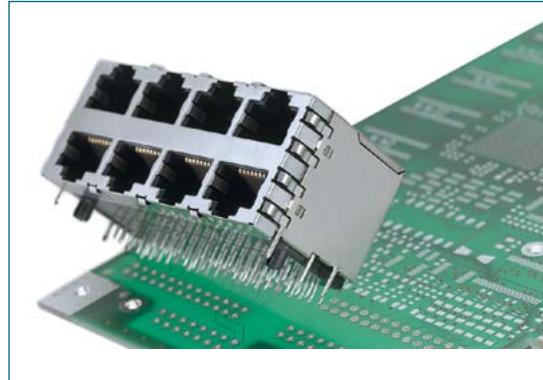

Reliable, simple, quick and solution-oriented – this range of products of PCB jacks and plugs does not only offer decisive advantages for your industrial applications but also for their planning, assembly and their daily use. You benefit from a consistently high-quality transmission section from the PC board of a device via the cabling of the system, to the IT landscape and this irrespective of whether M12, RJ45, RJ12, USB or other products are used.

# PC board RJ/USB

## Description

After its start in the telephone technology of the 1980s, the RJ45 gradually took over data technology and today is an established part of data centers, building technology and wiring, as well as everyday devices. Billionfold approved it is used for most of the data communication interfaces – independent of the application and particular manufacturers or interest groups. We offer you the ideal solution for a whole range of requirements and applications.

### Direct PC board connection

For direct PCB connections we offer a system consisting of RJ45 modules with integrated magnetics, PCB edge connector and metal shield. This combination makes it possible for the device designer to position the PCB edge connectors on the circuit board and thus no longer send the device jacks through the soldering process but to locate them in the assembly process. Through vertical and horizontal versions of the edge connector, the device can be connected as required.

In combination with a fixing flange in the housing, there is no longer any mechanical load on the fine fixations of the circuit board. For the fixation to the housing and the IP67 protection we offer various flanges.

Through the integrated magnetics in the RJ45 jack, it is no longer necessary to place them discreetly on the circuit board, thus remaining flexible in the use of the circuit board. Only the RJ45 module is exchanged for other transfer rates.

### PC board jacks with magnetics

Through the integrated magnetics in the RJ45 jack, a separate structure of the transformers is no longer necessary, thus saving construction space for additional components.

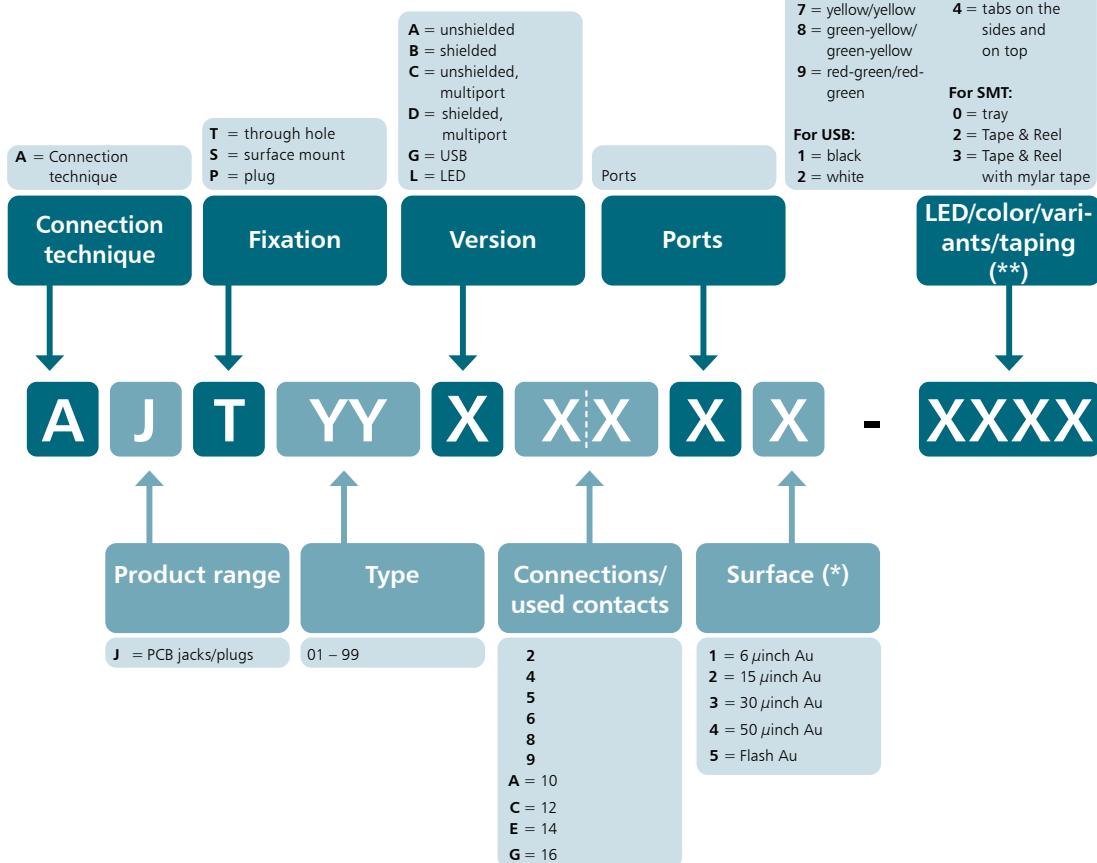

The RJ45 jacks with magnetics are available in the variants 10/100 Mbit or 1 Gbit and thus meet the most common applications at the present time.

## PCB jacks/plugs

In addition to connection solutions with integrated magnetics, we offer you a number of special RJ45 PCB jacks in different designs and for various processing options – developed in order to guarantee contact reliability in operation without any special housing. This resulted in a product program that offers ideal solutions to all those seeking a reliable and flexible connection technology for their device design. And when a RJ45 plug is required on the circuit board, we have a solution ready for you.

### Product key PCB jacks/plugs RJ45/USB

\* As an option also a surface with 50 µinch Au is available for some variants.

\*\* Information only required when one of the listed options is demanded.

PC board jacks RJ/USB

U | Contact

Modul RJ45 Magnetics 10/100 MBit

- RJ45 module with integrated magnetics
  - 10/100 Mbit
  - shielded
  - IP67 protection by using flanges V1, V4
  - direct connection to pc board by using the Metal Shield and PCB Edge Connector
  - not suitable for PoE / PoE plus

Modul RJ45 Magnetics 1 GBit

- RJ45 module with integrated magnetics
  - 1 GBit
  - shielded
  - IP67 protection by using flanges V1, V4
  - direct connection to pc board by using the Metal Shield and PCB Edge Connector

# Ethernet M12 PC board jacks

## Description

The Ethernet M12 plug is an industrial plug that is used for the field level and for industrial Ethernet. It is a round plug connection with metric thread that has been developed in several versions and codings for different protection classes.

For applications in the electrically sensitive environment, fully shielded EMV-compliant versions are available. Here, the contact carrier is surrounded by a metallic shield sleeve that is connected firstly to the cable screen and secondly to the locking screw. This ensures that the shield connection is guided to the device housing via the plug connector. In addition, another feature is the high mechanical rigidity and resistance to mechanical influences and vibrations.

**Ethernet M12 D-coded  
PCB jack through hole mounting**

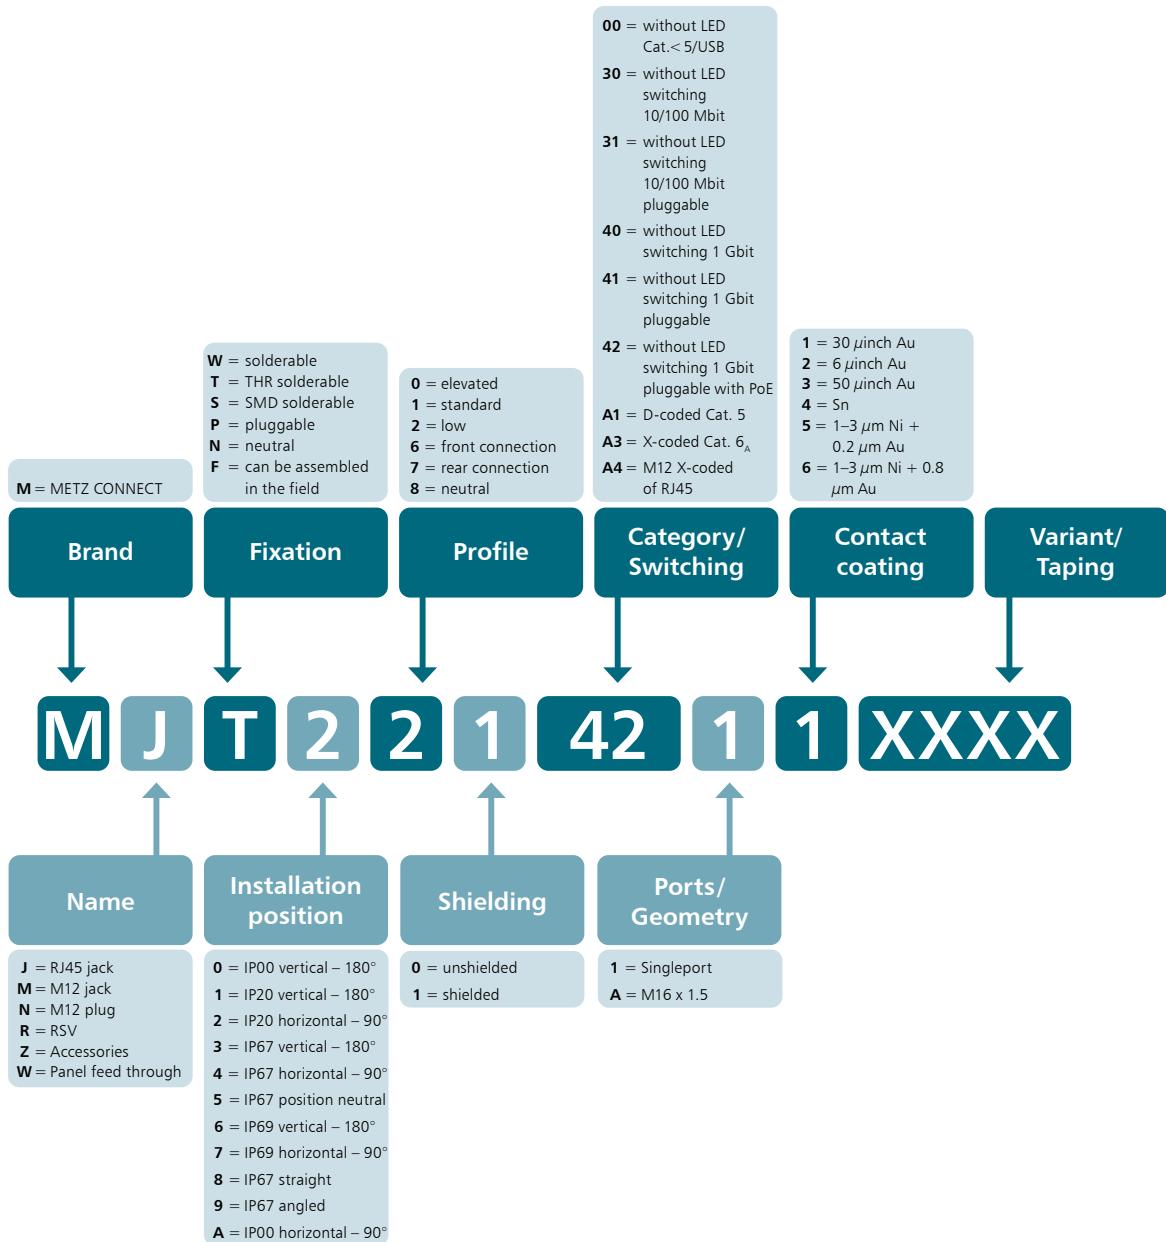

**Ethernet M12 X-coded  
PCB jack frontside mounting**

The plug connectors of this product series with a metric 12 mm thread are used today around the world in the area of automation and sensor technology. They are used for the transmission of data and signals.

Please note the new, structured and user-friendly product key for plug connectors. The new system describes the products according to their characteristics and thus creates transparency in the ordering and logistics processes.

## Product key Ethernet M12 PC board jacks

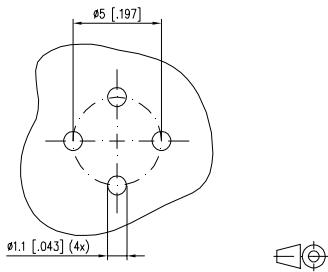

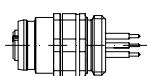

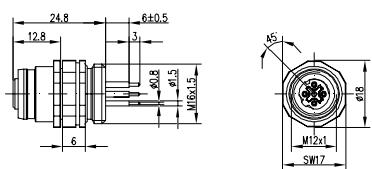

**MMW360A1A1**

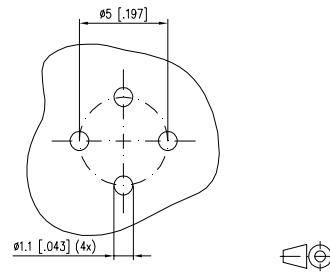

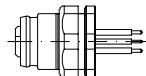

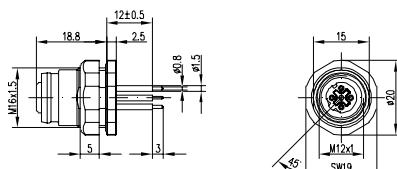

- Ethernet M12 female connector for PC boards
- 4-pole, D-coded as per IEC 61076-02-101
- solderable
- front mounting
- green PC board insert for THR

**MMW370A1A1**

- Ethernet M12 female connector for PC boards
- 4-pole, D-coded as per IEC 61076-02-101
- solderable
- through hole mounting
- green PC board insert for THR

### **MMT471A115**

- Ethernet M12 jack for PC boards
- 4-pole, D-coded as per IEC 61076-02-101
- angled 90°
- solderable THR
- side entry
- protection degree IP67 in mated condition
- Variants: suitable for a wall thickness up to 2.5 mm, up to 4 mm, up to 5 mm

#### **Drill pattern**

**MMT361A315**

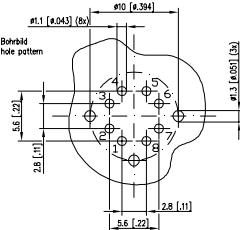

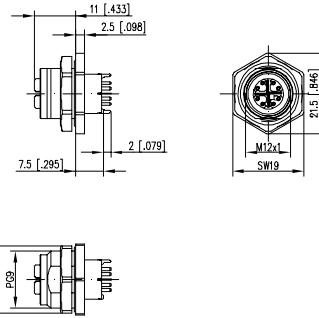

- Ethernet M12 jack Cat.6<sub>A</sub> for PC boards
- 8-pole, X-coded as per IEC 61076-02-109
- for 10 GBit Ethernet (IEEE 802.3an)
- solderable, THR
- top entry
- green PC board insert

**MMT371A3B5**

- Ethernet M12 jack Cat.6<sub>A</sub> for PC boards
- 8-pole, X-coded as per IEC 61076-02-109
- rear wall mounting
- for 10 GBit Ethernet (IEEE 802.3an)
- solderable, THR
- top entry
- protection degree IP67 in mated condition

Coding pin 720243 | gray

- The coding pins are inserted into the slots provided in the terminal block and respective header
  - This method of coding does not result in any circuit loss. Please refer to the drawing below for further details.
  - Variants: 720243-01-3 with 6 coding pins orange left; 70243-02-3 with 6 coding pins orange right, 720243-01-4 6 with 6 coding pins gray left, 720243-02-4 with 6 coding pins gray right

# Cross range application solutions

Next to the products from our U|Contact range that offers PCB connection systems, we also provide cross-range application solutions from the P|Cabling range enabling a structured and smooth data flow from the PCB to the network and the infrastructure.

## Rating of creepage and clearance distances

The creepage and clearance distances of the U|Contact terminal blocks and headers are rated according to EN 60664-1.

Rated voltage, overvoltage category and pollution degree applicable in practice can be determined only after soldering the terminal block or header onto the printed circuit board. Important factors for the rating are the minimum distance of the circuit paths, the relatively low resistance against creepage current of the printed circuit board and the absence of separating ribs.

Since we are unable to influence these factors the insulation data given for all U|Contact terminal blocks and U|Contact headers relate to their independent condition.

## Explanatory notes regarding the determination of Clearance and creepage distances

The standard EN 60664-1 uses the overvoltage category and the pollution degree to determine the Clearance and creepage distances.

The overvoltage category is divided into four sub-categories and determines the strength of the rated transient voltage in conjunction with the mains voltage.

The rated transient voltage basically determines the minimum clearance.

Minimum clearances apply to use on location up to a height of 2000 m above sea level.

The pollution degree is divided into four degrees and determines, in combination with insulating material and the shape of the separating ribs, the creepage distance.

## Overvoltage category according to EN 60664-1

### Equipment energized directly from the low-voltage mains

Technical data shall specify the overvoltage category as based on the following general explanation of overvoltage categories (see also IEC 364-4-443):

#### Equipment of overvoltage category I

is equipment for connection to circuits in which measures are taken to limit transient overvoltages to an appropriately low level. Examples are protected electronic circuits.

#### Equipment of overvoltage category II

is energy-consuming equipment to be supplied from the fixed installation. Examples of such equipment are appliances, portable tools and other household and similar loads.

#### Equipment of overvoltage category III

is equipment in fixed installations and for cases where the reliability and the availability of the equipment are subject to special requirements. Examples of such equipment are switches in the fixed installation and equipment for industrial use with permanent connection to the fixed installation.

#### Equipment of overvoltage category IV

is for use at the origin of the installation. Examples of such equipment are electricity meters and primary overcurrent protection equipment.

## Degrees of pollution in the micro-environment according to EN 60664-1

The following four degrees of pollution in the micro-environment are established for the purpose of evaluating creepage distances and clearances:

### Pollution degree 1

No pollution or only dry, non-conductive pollution occurs. The pollution has no influence.

### Pollution degree 2

Only non-conductive pollution occurs except that occasionally a temporary conductivity caused by condensation is to be expected.

### Pollution degree 3

Conductive pollution occurs or dry non-conductive pollution occurs which becomes conductive due to condensation which can be expected.

### Pollution degree 4

The pollution generates continuous conductivity caused by conductive dust or by rain or snow.

## Usage temperature

The usage temperature defines the temperature for the permanent operation of a component without destruction. This temperature is the addition of ambient temperature and the self-warming of the component during operation.

The ambient temperature is the temperature affecting permanently the component without regard to the self-warming of the component.

Temperature limits for product series screw type terminal blocks, ID terminal blocks, headers and accessories as well as spring clamp terminal blocks without lever or push button (i.e. ST061):

max. temperature limit	+105 °C
min. temperature limit	-40 °C

Temperature limits for spring clamp terminal blocks with lever or push button:

max. temperature limit	+105 °C
min. temperature limit	-40 °C

Example for rating work sheets (based on case A) (basic insulation at permanent voltage for equipment up to 2000 m above sea level) according to EN 60664-1.

### Circuits directly connected to the low voltage mains

influence quantity	selection based on	reference to EN 60664-1	value
<b>clearance</b>			
impulse withstand voltage	overvoltage category of the equipment	table 1	table 2
<b>creepage distance</b>			
voltage	Rated voltage [V] or rated insulation voltage	table 3a, 3b	table 4
pollution (influence of humidity)	pollution degree (micro-environment)	section 2.5.1	table 4
insulation material	comparative tracking index	section 2.7.1.3	table 4

- step 1 - selection of the overvoltage category
- step 2 - selection of the impulse voltage, according to table 1
- step 3 - determination of the minimum clearance (cl), according to table 2
- step 4 - selection of the Rated voltage for creepage distances according to tables 3a and 3b
- step 5 - determination of the pollution degree and the comparative tracking index (CTI)
- step 6 - determination of the minimum creepage distance (cr), according to table 4
- step 7 - if  $cr < cl$ :
  - for pollution degree 3 or 4 the distance on the insulation material is as large as the clearance (cl), according to table 4;
  - for pollution degree 1 or 2 the distance on the insulation material is allowed to be as large as the creepage distance (cr), if this distance withstands the test impulse voltage used to establish the clearance.

- 1) Line-to-earth insulation level for unearthed or impedance-earthed systems equals that for line-to-line because the operating voltage to earth of any line can, in practice, approach full line-to-line voltage. This is because the actual voltage to earth is determined by the insulation resistance and capacitive reactance of each line to earth; thus, low (but acceptable) insulation resistance of one line can in effect earth it and raise the other two to full line-to-line voltage to earth.

\* For relationship to Rated voltage see 2.2.1.(+)

\*\* These values correspond to the values given in table 1 (Rated impulse voltage for equipment energized directly from the low-voltage mains).

1000**	1000	--	1000

1) Line-to-earth insulation level for unearthed or impedance-earthed systems equals that for line-to-line because the operating voltage to earth of any line can, in practice, approach full line-to-line voltage. This is because the actual voltage to earth is determined by the insulation resistance and capacitive reactance of each line to earth; thus, low (but acceptable) insulation resistance of one line can in effect earth it and raise the other two to full line-to-line voltage to earth.

2) For equipment for use on both three-phase four-wire and three-phase three-wire supplies, earthed and unearthed, use the values for three-wire systems only.

\* For relationship to Rated voltage see 2.2.1.<sup>(\*)</sup>

\*\* These values correspond to the values given in table 1 (Rated impulse voltage for equipment energized directly from the low-voltage mains).

**Minimum creepage distances to avoid failure caused by tracking**  
**Extract of table 4 DIN EN 60664-1**

- 1) This voltage is
  - for functional isolation: the working voltage;
  - for basic and supplementary insulation of the circuit energized directly from the low-voltage mains: the rationalized voltage based on the rated voltage of the equipment, or the rated insulation voltage;
  - for basic or supplementary insulation of systems, equipment and internal circuits not energized directly from the low-voltage mains: the highest r.m.s. voltage which can occur in the system, equipment or internal circuit when supplied at Rated voltage, and under the most onerous combination of conditions of operating within equipment rating.
- 2) insulation material group IIb is not recommended for pollution degree 3 above 630 V

Note: For details see DIN EN 60664-1:2007

### Current carrying capacity

The maximum current carrying capacity (rated current) is indicated in the technical data of each terminal block. It considers the heating limit indicated in EN 60998-1. According to this standard the self-heating of current carrying parts of the termination point shall not exceed 45 K. In case of insulated conductors, the heating of a conductor has to be measured as near as possible to the termination point in the terminal block.

Termination has to be done with rigid or flexible conductors of the biggest cross section that the wire entry is designed for. The connecting material is charged with alternate current according to table 2 during the whole test.

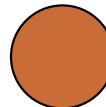

rated wire cross section	test current
mm <sup>2</sup>	A
0.5	6
0.75	9
1	13.5
1.5	17.5
2.5	24
4	32
6	41
10	57
16	76
25	101
35	125

The current carrying capacity also depends on the use of the terminal block or connector. It is also necessary to consider the respective directives for appliances such as EN 60335-1, EN 60598-1, EN 60664 etc.

### Copper conductors according to EN 60228

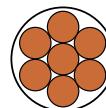

#### Single wire

Wire diameter = 1.78 mm  
 Number of wires = 1  
 Conductor dia. max. = 1.9 mm  
 Nominal cross section = 2.5 mm<sup>2</sup>

#### Multi-wire

Wire diameter = 0.67 mm  
 Number of wires = 7  
 Conductor dia. max. = 2.2 mm  
 Nominal cross section = 2.5 mm<sup>2</sup>

#### Rated current

is the value of current that a plug-in connector or coupler can carry continuously (not intermittently) and simultaneously through all contacts without exceeding the upper temperature limit.

The determination of the rated current value according to DIN VDE / IEC is different than according to UL.

#### Rated voltage

is the value of voltage according to which plug-in connectors and couplers are rated and to which certain operation characteristics are referred.

#### Wire cross section

The wire cross section for printed circuit board connectors and couplers as well as the admissible wire size range is defined according to IEC 60939-1 and given in the technical data of each series.

The contacts of RIA printed circuit board connectors and couplers are designed to allow termination of copper wires without special preparation. The use of wire ferrules is not necessary, but can prevent wire strands from separating.

#### Note

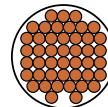

Conductors with soldered single wires are not allowed for connection to screw type terminal blocks, due to the cold flow of tin.

#### Screw type terminal blocks / Spring clamp terminal blocks pluggable terminal blocks

No current should be applied when terminal blocks are plugged or wired. Empirical values are available on demand if small currents are necessary for operational reasons.

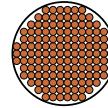

#### Fine stranded

Wire diameter = 0.26 mm  
 Number of wires = 45  
 Conductor dia. max. = 2.3 mm  
 Nominal cross section = 2.5 mm<sup>2</sup>

#### Ultra-fine stranded

Wire diameter = 0.16 mm  
 Number of wires = 120  
 Conductor dia. max. = 2.3 mm  
 Nominal cross section = 2.5 mm<sup>2</sup>

## Structure and dimensions of conductors

### Protection against manual contact

The design of the insulating moulds provides that voltage carrying parts are contained inside the mould after termination of a wire with nominal cross section. This ensures adequate protection against accidental contact by the test finger according to EN 60529.

Exceptions are terminal blocks RT015xxHDWC, RP015xxWBWC, RT015xxHDWU, RT016xxHBWU, RT015xxVDWC, RT034xxHBLC and single terminal blocks.

It is required that live components are protected against accidental contact by fingers within a protection area with a 30 mm radius. This means that hazardous parts of an electric device cannot be touched by the straight test finger according to EN 60529.

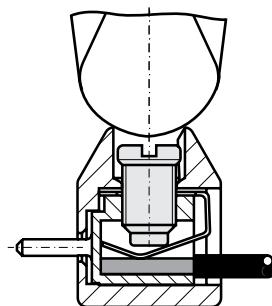

### Insulation moulds

The insulation moulds are made of Polyamide. This material is self-extinguishing according to UL 94V-0, flexible and unbreakable up to -40°C. Its stability under continuous temperature is rated up to 125° C, and up to 185° C for short periods. The melting point is situated between 215° C and 295° C depending on the material type (PA 4.6, 6, 6.6).

It is highly weatherproof due to special ultra-violet stabilisation and highly resistant to micro-organisms, bacteria, fungi, enzymes and termites. Both features provide good stability under tropical conditions.

The material is not resistant to strong acids with concentrations over 90 % such as formic acid or to phenol or superheated steam.

### Test finger arrangement

Testing is done with a terminated conductor of nominal cross section.

### Approvals

Our current approvals are shown in the product summary, the type and approval index and for each product throughout the catalog.

**Explanations:**

IEC: International Electrotechnical Commission

NCB: National Certification Body - IEC - accredited national test and approval agency

CB: participation in the CB procedure:  
acceptance of test results based on IEC standards

CCA: participation in the CCA procedure:  
acceptance of test results based on European Standards (EN) and documents for harmonisation (HD)

# A powerful team!

## Always there for you!

The success of METZ CONNECT is based on competence and the commitment of their worldwide active personnel. Out of their knowledge, qualification and experience that they contribute in the different areas result the successful, reliable and high-quality solutions for your networks. In our sales teams work excellent professionals with profound knowledge of the different product ranges, technologies and markets. They do not want to be just sales people but your contact and consultant to work out together with you the ideal solution for your networks. Your demands mean challenge to us and to offer you the matching solution will be the confirmation for our work.

So just put the rules to the test – give us a challenge!
