## AOT2918L/AOB2918L/AOTF2918L 100V N-Channel MOSFET

### General Description

The AOT2918L & AOB2918L & AOTF2918L uses Trench MOSFET technology that is uniquely optimized to provide the most efficient high frequency switching performance. Power losses are minimized due to an extremely low combination of  $R_{DS(ON)}$  and  $C_{rss}$ .

In addition, switching behavior is well controlled with a soft recovery body diode. This device is ideal for boost converters and synchronous rectifiers for consumer, telecom, industrial power supplies and LED backlighting.

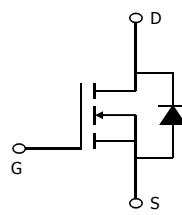

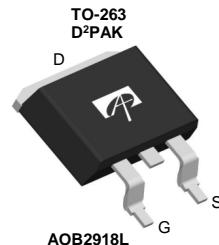

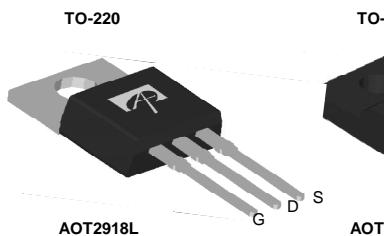

### Product Summary

$V_{DS}$	100V
$I_D$ (at $V_{GS}=10V$ )	90A
$R_{DS(ON)}$ (at $V_{GS}=10V$ )	< 7mΩ

100% UIS Tested

A. The value of  $R_{\theta JA}$  is measured with the device mounted on 1in<sup>2</sup> FR-4 board with 2oz. Copper, in a still air environment with  $T_A=25^\circ\text{ C}$ . The Power dissipation  $P_{\text{DSM}}$  is based on  $R_{\theta JA}$  and the maximum allowed junction temperature of  $150^\circ\text{ C}$ . The value in any given application depends on the user's specific board design, and the maximum temperature of  $175^\circ\text{ C}$  may be used if the PCB allows it.

B. The power dissipation  $P_D$  is based on  $T_{J(\text{MAX})}=175^\circ\text{ C}$ , using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.

C. Repetitive rating, pulse width limited by junction temperature  $T_{J(\text{MAX})}=175^\circ\text{ C}$ . Ratings are based on low frequency and duty cycles to keep initial  $T_J=25^\circ\text{ C}$ .

D. The  $R_{\theta JA}$  is the sum of the thermal impedance from junction to case  $R_{\theta JC}$  and case to ambient.

E. The static characteristics in Figures 1 to 6 are obtained using <300 $\mu\text{s}$  pulses, duty cycle 0.5% max.

F. These curves are based on the junction-to-case thermal impedance which is measured with the device mounted to a large heatsink, assuming a maximum junction temperature of  $T_{J(\text{MAX})}=175^\circ\text{ C}$ . The SOA curve provides a single pulse rating.

G. The maximum current limited by package is 120A.

H. These tests are performed with the device mounted on 1 in<sup>2</sup> FR-4 board with 2oz. Copper, in a still air environment with  $T_A=25^\circ\text{ C}$ .
