

Liquid Series Thermoelectric Cooler Assembly

The LA-160-24-02 thermoelectric cooler assembly offers dependable, compact performance by cooling objects via liquid to transfer heat. Heat is absorbed through a liquid heat exchanger and dissipated thru a high density heat sink equipped with an air ducted shroud and brand name fan. The thermoelectric modules are custom designed to achieve a high coefficient of performance (COP) to minimize power consumption. It has a maximum Qc of 160 Watts when $\Delta T = 0$ and a maximum ΔT of 40 °C at Qc = 0. The liquid heat exchanger is designed to accommodate distilled water with glycol. Corrosion resistant turbulators are enclosed inside channels to increase heat transfer. Mating port adaptors are sold separately.

Features

- Compact design
- Precise temperature control
- Reliable solid-state operation
- DC operation
- RoHS-compliant
- Applications
- Medical Diagnostics
- Industrial Lasers
- Medical Lasers
- Analytical Instrumentation

ELECTRICAL CONNECTIONS

NOTES

¹ For indoor use only	
² Turbulators are mounted inside liquid channels to create turbulent flow	
³ Cold block requires insulation to minimize moisture buildup under dew point conditions.
