

TERMOPTO Solid-State Relays

TERMOPTO solid-state relays are characterized by their compact design and pluggable cross connections. Featuring opto coupler technology, the TERMOPTO provides a compact, electronic alternative to electro mechanical relays.

The TERMOPTO compact terminal requires almost no maintenance. They feature integrated isolation of potential voltages, save space in the enclosure, reduce maintenance and optimize machine up time. Pluggable cross connections, available for terminals or Push In connection technology, reduce wiring time in installation and maintenance.

TERMOPTO solid-state relays are available in 10 input voltages and 3 output voltages for standard control voltages from 5 to 230V AC and DC, with either screw or Push In terminals.
